

Contents

1	An Introduction to Plasma Physics	1
1.1	Saha's Equation	4
1.2	The Debye Length	5
1.3	Fundamental Plasma Parameters	9
1.4	The Classical Description of Plasmas	14
2	Particle Orbit Theory	17
2.1	Motion in a Uniform, Static Magnetic Field	17
2.2	Motion in Orthogonal Electric and Magnetic Fields	19
2.3	Motion in Slowly Variable Magnetic Fields	24
2.3.1	Charged Particle Orbits in the Presence of a Magnetic Fields with a Weak Gradient	24
2.3.2	Magnetic Moment Conservation	26
2.3.3	Magnetic Mirrors and Magnetic Bottles	29
3	Kinetic Theory of Plasmas: An Outline	37
3.1	The Distribution Function	37
3.2	The Moments of the Distribution Function	41
3.3	Vlasov Equation and Jeans' Theorem	44
4	Fluid Models	49
4.1	The Case of Neutral Gases	49
4.2	The Plasma Case: Two-Fluid Models	56
4.3	The One-Fluid Model	59
5	Magnetohydrodynamics	71
5.1	MHD Equations	71
5.1.1	Magnetic Pressure	77
5.1.2	The Conservative Form of MHD Equations	78

5.2	The Time Evolution of Magnetic Fields	80	9	Magnetic Reconnection	203
5.2.1	$\mathcal{R}_m \ll 1$: Magnetic Diffusion	81	9.1	Driven Reconnection	209
5.2.2	$\mathcal{R}_m \gg 1$: Alfvén's Theorem	82	9.1.1	The Sweet-Parker Model	210
5.3	Equilibrium States of Ideal Plasmas	86	9.1.2	An Outline of the Petscheck Model	214
5.3.1	Force-Free Equilibria	87	9.2	Spontaneous Reconnection	216
5.3.2	Equilibria in the Presence of Magnetic Forces	91	9.2.1	Tearing Mode Instability	217
5.4	Perturbed Equilibrium States	94	9.2.2	The Plasmoid Instability of Thin Current Sheets	224
6	Instabilities	99	10	MHD Turbulence	229
6.1	Linear Stability of Ideal MHD Equilibria	100	10.1	Homogeneous and Isotropic Hydrodynamical Turbulence	231
6.2	Instabilities in the Presence of Gravity	104	10.2	Magnetohydrodynamic Turbulence	235
6.2.1	Rayleigh-Taylor Instability	106	10.3	Turbulence and Coronal Heating	239
6.2.2	Kruskal-Shafranov Instability: $B_0 \neq 0$	109	11	Build-Up of Magnetic Fields	247
6.2.3	Parker Instability	111	11.1	The Dynamo Problem	247
6.2.4	Instabilities in the Presence of Plasma Flows: Kelvin-Helmholtz Instability	122	11.2	The Anti-Dynamo Theorems	249
6.3	Instabilities in Cylindrical Geometry	130	11.3	Phenomenological Theory of Astrophysical Dynamos	252
6.3.1	Instability of a Plasma Column	130	11.3.1	The Generation of Toroidal Fields from Poloidal Ones	253
6.3.2	The Confinement of Solar Coronal Loops	138	11.3.2	The Generation of Poloidal Fields from Toroidal Ones	255
6.3.3	The Magnetorotational Instability (MRI)	143	11.4	Mean-field Electrodynamics	258
7	Waves	149	11.4.1	Simple Solutions of the Dynamo Equations	263
7.1	The Fourier Representation	150	11.5	The Creation of Magnetic Fields	271
7.1.1	Phase Velocity and Group Velocity	154	References	275	
7.2	Waves in the Ideal MHD Regime	155	Index	277	
7.2.1	Magnetic Waves	156			
7.2.2	Magnetosonic Waves	158			
7.3	Fluid Waves Beyond the MHD Regime	161			
7.3.1	Intermediate Frequencies: $\omega \lesssim \omega_{ce}$	161			
7.4	Waves in Kinetic Regimes: The Case of Landau Damping	167			
8	Shocks	181			
8.1	The Jump Conditions	184			
8.1.1	Contact Discontinuities	186			
8.1.2	Rotational Discontinuities	187			
8.2	MHD Shocks	189			
8.2.1	Perpendicular Shocks	189			
8.2.2	Parallel Shocks	192			
8.2.3	Oblique Shocks	193			
8.3	Shock Thickness	198			
8.4	Collisionless Shocks	200
