

CONTENTS

<i>Contributors</i>	<i>vii</i>
<i>Preface</i>	<i>ix</i>
<i>Future Contributions</i>	<i>xi</i>
1. Past and Present Attempts to Attain the Resolution Limit of the Transmission Electron Microscope	1
Ernst Ruska	
1. The Limits of Resolving Power and the Sources of Aberrations	2
2. The Single-Field Condenser Objective	23
3. Movement of the Image During Photographic Exposure	35
4. Lack of Sharpness of the Image	38
5. Changes in the Specimen	39
6. Self-Structure of Supporting Films	53
References	58
2. Phase Plates for Transmission Electron Microscopy	61
Christopher J. Edgcombe	
1. Introductory Survey	62
2. Postspecimen Plates	68
3. Theory for Postspecimen Plates	74
4. Images With Zernike Plates	81
5. Images With Straight-Edged Plates on the Cylindrical Axis	89
6. Discussion	93
7. Conclusions	94
Acknowledgments	95
Appendix A. The 2D Transform in Cylindrical Coordinates	95
A.1. Fourier Series	95
A.2. Hankel Transform	95
A.3. Conversion From Cartesian Form	96
A.4. Inverse Transform	98
References	98
3. X-Ray Lasers in Biology: Structure and Dynamics	103
John C.H. Spence	
1. Introduction	103
2. The X-Ray Free-Electron Laser	107

3. Data Acquisition Modes and Sample Delivery for XFEL Structural Biology	111
4. Radiation Damage Limits Resolution	116
5. Serial Crystallography at XFELs for Structural Biology	120
6. Molecular Machines and Single-Particle Imaging	122
7. Time-Resolved Serial Crystallography, Optical Pump-Probe Methods, and Photosynthesis	126
8. Time-Resolved SFX for Slower Processes: Mixing Jets and Other Excitations	129
9. Fast Solution Scattering and Angular Correlation Function Methods	130
10. Data Analysis	133
11. Summary	143
Acknowledgments	144
References	144
