Introduction 1 1.1 Fluid Mechanics in Engineering 1 **1.2** Fluids and the Continuum Hypothesis 3 1.3 Fluid Properties 5 **1.3.1** Mechanical Properties of Fluids 6 1.3.2 Thermal Properties of Fluids 8 1.3.3 Property Relations, the Ideal Gas, and the Incompressible Fluid 10 1.3.4 Auxiliary Properties of Fluids 12 **1.4** Dimensions and Systems of Units 22 1.5 Scope of Fluid Mechanics 28 1.5.1 Fluid Statics 29 1.5.2 Fluid Dynamics 29 **1.6** Solving Fluid Mechanics Problems (A Note to the Student) 32 1.6.1 Types of Fluid Mechanics Problems 33 **1.6.2** A Systematic Approach to Problem Solving 36 Problems 40

2

Mechanics of Nonflowing Fluids 47

2.1 Pressure at a Point: Pascal's Law 47

2.2 Pressure Variation in a Static Fluid 48 **2.2.1 Pressure Variation in a**

Constant-Density Fluid 51

2.2.2 Pressure Variation in a Variable-Density Fluid and the Standard Atmosphere 54

2.3 Manometry and Pressure Measurement 56
2.3.1 Manometers 56
2.3.2 Other Devices for Pressure Measurement 60
2.3.3 Absolute, Gage, and Vacuum Pressures 61
2.4 Pressure Forces on Surfaces 64

2.4.1 Forces on Plane Surfaces 642.4.2 Forces on Curved Surfaces 77

2.5 Mechanics of Submerged and Floating Bodies 82

2.5.1 Buoyancy 82

2.5.2 Stability of Submerged and Floating Bodies 84

2.6 Mechanics of Fluids in Rigid Body Motion 89 2.6.1 Uniform Linear Acceleration 90

2.6.2 Fluid Rotating About a Vertical Axis 91 **Problems** 97

3

Fundamental Principles and Concepts of Flow Analysis 111

3.1 Typical Flow Situations 111

3.2 Fundamental Laws for Flow Analysis 112

3.3 Mathematical Formulation of the Fundamental Laws 113

3.3.1 Field Representation: Lagrangian and Eulerian Approaches 114

3.3.2 Visualizing the Velocity Field: Flow Lines 117

3.3.3 Classifying the Velocity Field: Dimensionality, Directionality, and Steadiness 122

3.3.4 Differential versus Finite Control Volume Formulations 125

3.4 Illustration of Approaches to Formulation of the Fundamental Laws: Conservation of Mass 127

> 3.4.1 Differential Formulation: The Differential Continuity Equation 127

3.4.2 Finite Control Volume Formulation: The Integral Continuity Equation 134

3.4.3 Simplified Forms and Applications of the Integral Continuity Equation 139

3.4.4 Derivation of the Differential Continuity Equation from the Integral Continuity Equation 153

3.5 Some Characteristics of Flows and Flow Fields 155

> 3.5.1 Kinematics of a Fluid Particle: Acceleration, Rotation, Deformation 156

3.5.2 Flow Regimes: Inviscid Flow, Laminar Flow, Turbulent Flow 163

3.6 Possible Approaches for the Solution of Flow Problems 167 Problems 172

The Differential Approach to Flow Analysis 177

4.1 Inviscid Flow: Euler and **Bernoulli Equations** 177

4.1.1 Streamline Coordinates 178

4.1.2 Euler's Equations of Motion in Streamline Coordinates 180

4.1.3 Integration of the Streamline Equation of Motion: Bernoulli's Equation 184

4.1.4 Integration of the Equation of Motion Normal to Streamlines 200 4.1.5 Euler's Equations in "Ordinary" Coordinates 204 4.1.6 Integration of Euler's Equations for Irrotational Flow 207

4.2 Viscous Flow 210 4.2.1 A Simple Viscous Flow: Fully **Developed Flow Between** Parallel Plates 210

> 4.2.2 General Equations of Motion for a Viscous Fluid: Cauchy and Navier-Stokes Equations 215

4.3 Boundary and Initial Conditions for Flow Problems 222 Problems 227

The Finite Control Volume Approach to Flow Analysis 237

- 5.1 Control Volumes and Systems 238
- 5.2 The Control Volume Rate-of-Change Equation 239
- 5.2.1 Derivation 239

5.2.2 Illustrative Application: The Integral Continuity Equation 243

5.2.3 The Control Volume Rate-of-Change Equation for Some Special Cases 243 5.2.4 Selection of Appropriate Control Volumes 244

5.3 Newton's Second Law: The Linear Momentum Theorem 245

5.3.1 Evaluating the Terms in the Linear Momentum Equation 246

5.3.2 Linear Momentum Equation for Moving and Deforming Control Volumes 268

5.3.3 Connection Between Control Volumes and Differential Approaches: Derivation of Euler's Equation Using the Linear Momentum Theorem 278

5.4 The Laws of Thermodynamics: The General Energy Equation and the Mechanical Energy Equation 280

> 5.4.1 Some Simplified Forms of the General Energy Equation 285

5.4.2 Mechanical Energy and the Steady-Flow Mechanical Energy Equation 292 5.4.3 Summary and Comparison of Various Forms of the Energy Equation 299

5.5 The Angular Momentum Theorem 310

5.5.1 Derivation of the Linear Momentum Equation 310

5.5.2 An Application of the Angular Momentum Theorem: Turbomachinery 319 Problems 326

6

Organizing the Experimental Approach to Flow Problems: Dimensional Analysis 343

- 6.1 The Need for Dimensional Analysis 344
- 6.2 The Foundations of Dimensional Analysis 348
- 6.3 Dimensionless Parameters and the Pi Theorem 352
- 6.4 Putting the Pi Theorem to Work: A Prescription for Dimensional Analysis 355
- 6.5 Customary Dimensionless Parameters in Fluid Mechanics 368
- 6.6 An Application of Dimensional Analysis: Model Testing and Similitude 383 Problems 395

Steady Incompressible Flow in Pipes and Ducts 401

7.1 Regimes of Flow in a Straight Pipe or Duct 402

7.1.1 Laminar Flow and Turbulent Flow 402

7.1.2 Developing and Fully Developed Flow 406

Contents XI

7.2 Analysis of Fully Developed Flow in Pipes and Ducts 410

7.2.1 Application of Energy Equation 410

7.2.2 Application of Linear Momentum Equation 411

7.2.3 Application of Dimensional Analysis: Friction Factors and Loss Coefficients 413

7.2.4 Laminar Flow in a Circular Pipe 415

7.2.5 Turbulent Flow in a Circular Pipe: Experimental Information and the Moody Chart 421

7.2.6 Three Types of Pipe Flow Problems 429

7.2.7 Fully Developed Flow in Noncircular Ducts 439

7.2.8 Detailed Consideration of Fully Developed Turbulent Flow in a Circular Pipe 447

7.3 Flow in Pipe and Duct Systems 457 7.3.1 System Components and Local Losses 457

> 7.3.2 Analysis and Design of Pipe and Duct Systems 465

7.4 Flow Measurement 484 Problems 494

Applications of Flow Analysis: External Flow 509

8.1 Force on Bodies: Drag and Lift 509

8.1.1 Body Geometry and Force Components 510

8.1.2 Calculation of Drag and Lift: Force Coefficients 511

8.2 Drag 518

8.2.1 Drag of Simple Shapes: Types of Drag 519

8.2.2 Drag at High Reynolds Number: The Boundary Laver 526

8.2.3 Drag at Low Reynolds Number 531

8.2.4 Working Information on Drag Coefficients 535

Applications of Flow Analysis:

xii Contents

8.3 Lift 539

8.3.1 Mechanism of Lift Generation: The Simple Airfoil 539

8.3.2 The Kutta-Joukowsky Theorem 541

8.3.3 Lift on Spinning Cylinders and Spheres: The Magnus Effect 544

8.3.4 Lift (and Drag) Information for Standard Airfoils 546

8.3.5 Practical Considerations: Lift Augmentation Devices and Three-Dimensional Effects 549

8.4 Nonaviation Applications of Aerodynamics 552

8.4.1 Road Vehicle Aerodynamics 552

8.4.2 Flow-Induced Vibration 554

8.4.3 Aerodynamics in Sports 558

8.5 Accelerating Bodies and Added Mass 564 Problems 569

9

Applications of Flow Analysis: The Potential Flow and Boundary Layer Model of a High Reynolds Number Flow Field 579

- 9.1 The Potential Flow and Boundary Layer Model 580
- 9.2 Potential Flow 582

9.2.1 The Basics of Potential Flow Theory: Irrotationality, Velocity Potential, and Stream Function 583

9.2.2 Plane Potential Flows from Singularities 595

9.2.3 Simple Body Flows by Superposition of Singularities 598

9.2.4 Plane Potential Flows from Complex Variables 608

9.2.5 Direct Methods for Calculation of Potential Flow in a Plane 613

9.3 Boundary Layers 622

9.3.1 Dimensional Analysis and Qualitative Estimates of Boundary Layer Parameters 623

9.3.2 The Differential Equations of Boundary Layer Analysis 629

9.3.3 Evaluation of Key Boundary Layer Parameters 631

9.3.4 Momentum Integral Equation for Boundary Layers 633
9.3.5 Calculation of Boundary Layer Parameters for Flow over a Flat Plate 639
9.3.6 Calculation of Boundary Layers with Pressure Gradient 648
9.3.7 Boundary Layer Separation and the Breakdown of the Potential Flow and Boundary Layer Model 657
Problems 661

10

Applications of Flow Analysis: Compressible Flow 667

10.1 Some Concepts from Thermodynamics 668 10.1.1 Properties, State, and Process 668

10.1.2 The Laws of Thermodynamics 67010.1.3 Entropy and the Isentropic Process 672

10.1.4 Stagnation Properties 673

10.2 Waves in Compressible Fluids 67810.2.1 Wave Speed, Speed of Sound, and Mach Number 679

10.2.2 The Radically Different Nature of Subsonic and Supersonic Flow 684

10.2.3 Shock Waves 687

10.3 Isentropic Flow and Bernoulli's Equation 695

10.3.1 Steady Isentropic Flow of an Ideal Gas 695

10.3.2 Relation to Bernoulli's Equation and a Criterion for Incompressible Flow 700

10.3.3 The Critical State 702

10.4 Internal Flow: One-Dimensional Flow in a Variable Passage Area 703
10.4.1 Isoenergetic-Isentropic Flow with Area Change: Preliminary Considerations 703
10.4.2 Isoenergetic-Isentropic Flow of an Ideal Gas 706
10.4.3 Flow in a Converging Nozzle 716
10.4.4 Flow in a Converging Nozzle 719 10.5 Internal Flow: Constant-Area Duct Flow with Friction 725
10.5.1 Preliminary Consideration: Comparison with Incompressible Duct Flow 726
10.5.2 Workless Adiabatic Flow (Fanno Flow) of an Ideal Gas 727
10.5.3 Frictional Flow in a Duct 736

10.6 Effects of Compressibility in External Flow 744 Problems 749

11

Applications of Flow Analysis: Liquid Flow in Open Channels 759

11.1 Introductory Concepts 760

11.1.1 Velocity Distributions and the One-Dimensional Flow Approximation 760

11.1.2 Dimensionless Parameters and Wave Speed 761

11.1.3 Classification of Open Channel Flow 764

11.2 Uniform Flow 765

11.2.1 Chezy and Manning Formulas 766 **11.2.2** Analysis and Design of Uniform Flow Channels 772

11.3 Concepts for Analysis of Varied Flow 776 11.3.1 Specific Energy and Critical Depth 776

> **11.3.2** Frictionless Flow in a Rectangular Channel 781 **11.3.3** Hydraulic Jump 792

11.4 Gradually Varied Flow 797

11.4.1 The Differential Equation of Gradually Varied Flow 797 **11.4.2** Classification of Surface Profiles 800

11.4.3 Computation of Surface Profiles 804

11.5 Miscellaneous Topics in Open Channel Flow 808

Contents XIII

11.5.1 Measurement Methods for Open Channel Flow 808
11.5.2 Analogy Between Open Channel Flow and Compressible Flow 814
Problems 815

Appendixes 821

Appendix A Physical Properties 821

Table A.1 Properties of the U.S.Standard Atmosphere (SI Units)821

Table A.2 Properties of the U.S.Standard Atmosphere (EE Units)822

Table A.3 Physical Properties of Dry Air andCommon Gases at Atmospheric Pressure(SI Units)823

Table A.4 Physical Properties of Dry Air andCommon Gases at Atmospheric Pressure(EE Units)824

Table A.5 Physical Properties of Ordinary Waterand Common Liquids (SI Units)825

Table A.6 Physical Properties of Ordinary Waterand Common Liquids (EE Units)826

Table A.7 Physical Properties of SAE Oilsand Lubricants827

Appendix B Properties of Common Geometric Areas 828

Appendix C Conversion Factors 830

Table C.1 Time Conversion Factors830Table C.2 Length Conversion Factors830Table C.3 Area Conversion Factors831Table C.4 Volume Conversion Factors831Table C.5 Mass Conversion Factors832Table C.6 Force Conversion Factors832Table C.7 Pressure Conversion Factors833Table C.8 Velocity Conversion Factors833Table C.9 Absolute Viscosity834

XIV Contents

Table C.10 Kinematic Viscosity
Conversion Factors 834Table C.11 Volume Flow Rate
Conversion Factors 835Table C.12 Power Conversion Factors 835Table C.13 Energy Conversion Factors 836Table C.14 Specific Energy
Conversion Factors 836

Appendix D Pipe, Tube, and Tubing Dimensions 837

Table D.1 Steel Pipe837Table D.2 Copper Tube and Tubing839

Appendix E Tables of Compressible Flow Functions for Ideal Gas with k = 1.4 840

 Table E.1 Isentropic Flow Functions
 840

Table E.2 Normal Shock Functions842Table E.3 Fanno Flow Functions844

Appendix F Fluid Mechanics Films 846

Appendix G List of Symbols 847

Appendix H Differential Equations in Cylindrical and Spherical Coordinates 854
