

Contents

1 Forecasting and Chaos	1
1.1 Historical Introduction	1
1.1.1 The Scientific Method	1
1.1.2 Forecasting and Determinism	3
1.2 Chaotic Dynamics	9
1.3 Computer Numerical Explorations	13
1.3.1 Solving ODEs Numerically.....	13
1.3.2 Numerical Forecast	14
1.3.3 Symplectic Integrators	17
1.4 Shadowing and Predictability	19
1.5 Concluding Remarks	22
References	22
2 Lyapunov Exponents	25
2.1 Lyapunov Exponents	25
2.2 The Lyapunov Spectrum	27
2.3 The Lyapunov Exponents Family.....	30
2.4 Finite-Time Exponents	33
2.5 Distributions of Finite-Time Exponents	34
2.6 The Harmonic Oscillator	36
2.7 The Rössler System	38
2.8 The Hénon–Heiles System.....	43
2.9 Concluding Remarks	54
References	56
3 Dynamical Regimes and Time Scales	61
3.1 Temporal Evolution	61
3.2 Regimes Identification	63
3.3 Transient Behaviours, Sticky Orbits and Transient Chaos	64
3.4 The Hénon-Heiles System	65
3.5 The Contopoulos System	71
3.6 The Rössler System	80

3.7	Hyperbolicity Characterisation Through Finite-Time Exponents	82
3.8	Concluding Remarks	86
	References	87
4	Predictability	91
4.1	Numerical Predictability	91
4.2	The Predictability Index	93
4.2.1	The Hénon-Heiles System	96
4.2.2	The Contopoulos System	105
4.2.3	The Rössler System	106
4.2.4	A Galactic System	112
4.3	Concluding Remarks	123
	References	126
