<i>Preface to the Classics Edition</i>	ix
<i>Preface</i>	xi
<i>Glossary of Symbols</i>	xiii
<i>Errata</i>	xv
<b>I. Computerized Tomography</b>	<b>1</b>
I.1 The basic example: transmission computerized tomography	1
I.2 Other applications	3
I.3 Bibliographical notes	8
<b>II. The Radon Transform and Related Transforms</b>	<b>9</b>
II.1 Definition and elementary properties of some integral operators	9
II.2 Inversion formulas	18
II.3 Uniqueness	30
II.4 The ranges	36
II.5 Sobolev space estimates	42
II.6 The attenuated Radon transform	46
II.7 Bibliographical notes	52
<b>III. Sampling and Resolution</b>	<b>54</b>
III.1 The sampling theorem	54
III.2 Resolution	64
III.3 Some two-dimensional sampling schemes	71
III.4 Bibliographical notes	84
<b>IV. Ill-posedness and Accuracy</b>	<b>85</b>
IV.1 Ill-posed problems	85
IV.2 Error estimates	92
IV.3 The singular value decomposition of the Radon transform	95
IV.4 Bibliographical notes	101
<b>V. Reconstruction Algorithms</b>	<b>102</b>
V.1 Filtered backprojection	102
V.2 Fourier reconstruction	119
V.3 Kaczmarz's method	128

V.4 Algebraic reconstruction technique (ART)	137
V.5 Direct algebraic methods	146
V.6 Other reconstruction methods	150
V.7 Bibliographical notes	155
<b>VI. Incomplete Data</b>	<b>158</b>
VI.1 General remarks	158
VI.2 The limited angle problem	160
VI.3 The exterior problem	166
VI.4 The interior problem	169
VI.5 The restricted source problem	174
VI.6 Reconstruction of homogeneous objects	176
VI.7 Bibliographical notes	178
<b>VII. Mathematical Tools</b>	<b>180</b>
VII.1 Fourier analysis	180
VII.2 Integration over spheres	186
VII.3 Special functions	193
VII.4 Sobolev spaces	200
VII.5 The discrete Fourier transform	206
<b>References</b>	<b>213</b>
