

CONTENTS

<i>Contributors</i>	<i>vii</i>
<i>Preface</i>	<i>ix</i>
<i>Future Contributions</i>	<i>xi</i>
1. Non-Negative Sparse Mathematical Morphology	1
Jesús Angulo, Santiago Velasco-Forero	
1. Introduction	1
2. NMF and Sparse Variants	6
2.1. Definition of NMF on Vector Space	6
2.2. Basic NMF Algorithms	7
2.3. NMF with Sparseness Constraints	8
2.4. A Few Properties of NMF	9
3. Sparse Approximation to Binary Morphological Operators	10
3.1. Sparse NMF Approximations of Binary Sets	10
3.2. Sparse Max-Approximation to Binary Dilation and Erosion	11
3.3. Sparse Max-Approximation to Binary Opening and Closing	16
3.4. Consistency and Noise Robustness of Sparse Morphological Operators	17
4. Sparse Approximation to Numerical Morphological Operators	19
4.1. Sparse-NMF Processing of Upper Level Sets	20
4.2. Sparse-NMF Representation and Processing of Gray-Scale Images	23
5. Applications	25
5.1. Sparse Processing of Multivariate Boolean Textures	26
5.2. Sparse Processing of Hyperspectral Images	28
6. Conclusions and Perspectives	32
References	34
2. Disorder Modifications of the Critical Temperature for Superconductivity: A Perspective from the Point of View of Nanoscience	39
Clifford M. Krowne	
1. Introduction	39
2. Phonon Operator and the Electron–Phonon Interaction	45
3. Matsubara Many-Body Quantum Green’s Functions for Phonons and Electrons	46
4. Approximation of the Phonon Matsubara Propagator by Its Bare Value	47
5. Finding the Renormalized Phonon Green’s Function Due to Electron Screening	50
6. Renormalized Electron Vertex Based on Phonon Modification	51

7.	Renormalized Total Potential Energy Due to Coulomb and Phonon Effects	52
8.	RPA Permittivity as Affected by the Correlation Function Polarization	53
9.	Disorder Characterized Impurity Scattering	55
10.	Ladder Superconducting Cooper Vertex with Disorder Incorporated	57
11.	Critical Temperature Obtained from a Cooper Instability Equation	58
12.	Relating the Disorder Potential Energy to the Gap Parameter	67
13.	Conclusions	71
	Acknowledgments	71
	References	72
3.	The Struggle to Overcome Spherical Aberration in Electron Optics	75
	Albert Septier	
1.	Introduction	76
2.	The Coefficient of Spherical Aberration	76
2.1.	Definition	76
2.2.	The General Expressions for the Coefficients	78
2.3.	The Impossibility of Correction in a Centered System Without Space Charge	79
2.4.	The Round Lens "Without Aberration"	79
3.	The Search for Lenses with Little Spherical Aberration	80
3.1.	Weak Lenses with Minimum Aberration	80
3.2.	Work on Strong Lenses	86
3.3.	Combinations of Lenses: Asymmetrical Lenses	91
4.	Attempts to Correct the Aperture Aberration	95
4.1.	High Frequency Lenses	96
4.2.	Electrostatic Charge	97
4.3.	Discontinuities in the Function $\Phi'(z)/\Phi(z)$	100
4.4.	Departure from Rotational Symmetry	104
5.	Correction by Means of Astigmatic Systems	104
5.1.	The General Principle	104
5.2.	Historical Survey of the Various Attempts at Correction	105
5.3.	Investigations of Quadrupole Lenses: Combinations Equivalent to Strongly Convergent Round Lenses	113
5.4.	The Aperture Aberrations of Quadrupole Lenses	118
6.	The Ultimate Performance of Corrected Systems	135
6.1.	Additional Aberrations Arising from Mechanical Defects	135
6.2.	Other Limitations	140
6.3.	Correction in Practice	140
7.	Perspectives for the Future	142
7.1.	The Present Situation	142
7.2.	New Means of Improvement	143
	References	145
