

CONTENTS

<i>Contributors</i>	<i>ix</i>
<i>Preface</i>	<i>xi</i>
<i>Future Contributions</i>	<i>xiii</i>
1. Convolution in (max, min)-Algebra and Its Role in Mathematical Morphology	1
Jesús Angulo	
1. Introduction	2
2. Basic Notions and Notations	5
3. (max, min)-Convolutions: Definition and Properties	10
3.1. Definition	10
3.2. Duality by Complement vs. Duality by Adjunction	11
3.3. Commutation with Level Set Processing	14
3.4. Further Properties	18
3.5. Openings, Closings Using (max, min)-Convolutions and Granulometries	22
4. Hopf–Lax–Oleinik Formulas for Hamilton–Jacobi Equation $u_t \pm H(u, Du) = 0$	27
4.1. Morphological PDE for Classical Dilation and Erosion	27
4.2. Viscosity Solution of Hamilton–Jacobi Equation with Hamiltonians Containing u and Du	28
5. Nonlinear Analysis Using Operators (Δ, ∇)	33
5.1. Quasi-Concavity	33
5.2. Lipschitz Approximation	35
5.3. A Transform in (max, min)-Convolution	39
6. Ubiquity of (max, min)-Convolutions in Mathematical Morphology	44
6.1. Distance Function	44
6.2. Flat Morphological Operators Using Indicator Functions	45
6.3. Links with Fuzzy Morphology	46
6.4. Links with Viscous Morphology	48
6.5. Links with Boolean Random Function Characterization	51
6.6. Links with Geodesic Dilation and Erosion	58
7. Conclusion and Perspectives	60
Acknowledgment	63
References	63
2. Critical Magnetic Field and Its Slope, Specific Heat, and Gap for Superconductivity as Modified by Nanoscopic Disorder	67
Clifford M. Krowne	

1. Introduction	67
2. Relevant Statistical Energies to Use for Finding Critical Magnetic Field, Heat Capacity, and Other Parameters	73
3. Energy Dispersion Relation Obtained from a Bogoliubov Transformation on a Mean Field BCS Hamiltonian	74
4. Averaged Energy E to Be Used in the Free Energy Construction	79
5. Microscopically Determined Entropy S	81
6. Evaluating the Microscopic Entropy S	82
7. Evaluating the Averaged Energy E	84
8. Critical Magnetic Field from Microscopic Approach	86
9. Specific Heat of Electrons for the System	88
10. Slope of the Critical Magnetic Field at the Critical Temperature	89
11. Relating the Disorder Potential Energy to the Gap Parameter	90
12. Conclusions	94
Acknowledgments	94
References	94
3. Mirror Electron Microscopy	99
A.B. Bok, J.B. le Poole, J. Roos, H. de Lang	
1. Introduction	100
1.1. Scanning Electron Microscope	100
1.2. Emission Electron Microscope	101
1.3. Reflection Electron Microscope	101
1.4. Mirror Electron Microscope	101
2. Contrast Formation in a Mirror Electron Microscope with Focused Images	105
2.1. Principle	105
2.2. Calculations	106
2.3. Model A	109
2.4. Model B (Solution of the Exact Equations of Motion 2.1a and b)	121
2.5. Model C	127
2.6. Comparison with the Image Contrast for a Mirror Projection Microscope	138
2.7. Magnetic Contrast	143
2.8. Concise List of Symbols Used in Section 2	145
3. Description and Design of a Mirror Electron Microscope with Focused Images	146
3.1. Description	146
4. Results and Applications	155
4.1. Results	155
4.2. Applications	160
Appendix A A Scanning Mirror Electron Microscope with Magnetic Quadrupoles (Bok et al., 1964)	162

Appendix B Calculation of the Influence of the Specimen Perturbation on the Phase of the Reflected Electron Beam in a Mirror Electron Microscope	166
Appendix C Practice of Mirror Electron Microscopy	171
Appendix D Shadow Projection Mirror Electron Microscopy in "Straight" Systems	182
References	190
