1	Introduction	1
1.1	Fusion Neutrons	2
1.2	Fusion Facilities	4
1.2.1	Magnetic Confinement Fusion Facilities	4
1.2.2	Inertial Confined Fusion Facilities	9
1.2.3	Other Fusion Facilities	10
1.3	Fusion Energy Development Programs	11
1.4	Fusion Neutronics	13
1.4.1	Neutronics Characteristics of Fusion Systems	13
1.4.2	Introduction to Fusion Neutronics	14
	References	17
 Part I Neutronics Theories and Methodologies for Fusion		
2	Neutron Transport Theory and Simulation	21
2.1	Interaction of Neutrons with Matter	21
2.2	Foundation of Neutron Transport Theory	24
2.2.1	Neutron Transport Equation	25
2.2.2	Fixed Source and Eigenvalue Problems	29
2.3	Neutron Transport Computational Methods	31
2.3.1	Monte Carlo Methods	31
2.3.2	Deterministic Methods	48
2.4	Transport Simulation Codes	59
2.4.1	Monte Carlo Codes	59
2.4.2	Deterministic Codes	62
	References	63
3	Neutron-Induced Transmutation and Activation	65
3.1	Principles of Transmutation and Activation	65
3.1.1	Material Activation	66

3.1.2	Tritium Breeding	67
3.1.3	Fission Fuel Breeding and Depletion	68
3.1.4	Nuclear Waste Transmutation	68
3.2	Typical Parameters of Transmutation and Activation	71
3.2.1	Material Activation	71
3.2.2	Tritium Breeding	73
3.2.3	Fission Fuel Breeding and Depletion	73
3.2.4	Nuclear Waste Transmutation	74
3.3	Calculation Methods of Transmutation and Activation	75
3.3.1	Bateman Equation	76
3.3.2	Analytic Methods	77
3.3.3	Numerical Methods	80
3.4	Transmutation and Activation Simulation Codes	86
	References	89
4	Neutron Irradiation and Material Damage	91
4.1	Mechanisms of Neutron Irradiation Damage	91
4.2	Displacement Damage	93
4.2.1	Primary Collisions	93
4.2.2	Cascade Collisions	94
4.2.3	Displacement Damage Calculations	95
4.3	Neutron Irradiation Effects on the Microstructure and Properties of Materials	98
4.3.1	Irradiation Effects on Material Microstructure	98
4.3.2	Irradiation Effects on Material Properties	101
4.4	Research Methods of Fusion Neutron Irradiation Damage to Materials	107
4.4.1	Experimental Studies on Neutron Irradiation Damage	107
4.4.2	Numerical Simulations of Neutron Irradiation Damage	109

5	Radiation Dosimetry and Biological Safety	115
5.1	Principles and Requirements of Radiological Protection	115
5.2	Radioactive Sources and Nuclide Migration	118
5.2.1	Radioactive Source Terms	118
5.2.2	Radionuclide Migration in Fusion Systems	119
5.2.3	Radionuclide Migration in the Environment	120
5.3	Radiation Dosimetry Calculations	125
5.3.1	Dosimetric Quantities in Radiological Protection	125
5.3.2	External Exposure Calculations	129
5.3.3	Internal Exposure Calculations	133

5.4	Biological Effects of Radiation	137
5.4.1	Principles of the Biological Effects of Radiation	137
5.4.2	Biological Effects of Tritium	138
5.4.3	Biological Effects of Neutrons	140
	References	143
6	Fusion Nuclear Data Libraries	145
6.1	Introduction to Nuclear Data Libraries	145
6.1.1	Experimental Nuclear Data Libraries	146
6.1.2	Evaluated Nuclear Data Libraries	146
6.1.3	Application Nuclear Data Libraries	147
6.2	Transport Nuclear Data Libraries	148
6.2.1	Processing Methods for Transport Nuclear Data Libraries	148
6.2.2	Typical Transport Nuclear Data Libraries	159
6.3	Transmutation and Activation Nuclear Data Libraries	160
6.3.1	Activation Cross-section Libraries	161
6.3.2	Decay Data Libraries	163
6.3.3	Fission Yields Data Libraries	163
6.4	Radiation Damage Nuclear Data Libraries	164
6.4.1	Processing Methods of Radiation Damage Nuclear Data Libraries	165
6.4.2	Typical Radiation Damage Nuclear Data Libraries	168
	References	169
7	Comprehensive Neutronics Simulations	171
7.1	Framework of Comprehensive Simulation Systems	171
7.1.1	Main Simulation Objects	172
7.1.2	Key Issues	173
7.1.3	Typical System Architectures	174
7.2	Accurate Modeling	175
7.2.1	CSG Modeling	176
7.2.2	Facet Modeling	182
7.2.3	Mesh Modeling	183
7.2.4	Voxel-Based Modeling	184
7.3	Whole-Process and Multiphysics Coupling Neutronics Calculations	186
7.3.1	MC and Deterministic Coupling Calculations	187
7.3.2	Whole-Process Neutronics Calculations	191
7.3.3	Multiphysics Coupling Neutronics Calculations	192
7.4	Multidimensional Visualized Analyses and Virtual Simulations	194
7.4.1	Multidimensional Visualized Analyses	194
7.4.2	Virtual Simulations	197

7.5	Typical Simulation Systems	200
7.5.1	SuperMC	200
7.5.2	ISPC	203

10.1.1	Principles of Hybrid Reactors	283
10.1.2	Features of Hybrid Reactors	285
10.1.3	Typical Design Concepts	288

10.2	Neutronics Design of Hybrid Reactors	292
10.2.1	Neutronics Design Objectives	292
10.2.2	Neutronics Design Methods	293
10.2.3	Examples of Hybrid Reactor Neutronics Design	297
	References	308

Part III Fusion Neutronics Experiment Technologies

11	Experimental Methods of Fusion Neutronics	311
11.1	Characteristics of Fusion Neutronics Experiments	311
11.2	Fusion Neutron Detection Techniques	313
11.2.1	Principles of Neutron Detection	313
11.2.2	Measurements of Neutron Flux	316
11.2.3	Measurements of Neutron Energy Spectrum	323
11.3	Methods of Neutron Cross-section Measurements	332
11.3.1	Measurements of Total Cross-sections	332
11.3.2	Measurements of Differential Cross-sections	333
11.4	Methods of Various Macroscopic Integral Measurements	335
11.4.1	Measurements of Neutron Multiplication Factors	335
11.4.2	Measurements of Tritium Production Rates	336
11.4.3	Measurements of Nuclear Heat Deposition	338
11.4.4	Measurements of Transmission Probability Spectrum	339
11.4.5	Measurements of Neutron Activation Rates	339
11.4.6	Measurements of Radiation Dose	340
11.4.7	Measurements of Other Macroscopic Integrals	340
	References	343
12	Experimental Facilities of Fusion Neutronics	345
12.1	Introduction to Neutron Sources	345
12.2	Accelerator-Based Fusion Neutron Sources	347
12.3	Fusion Reactor-Based Neutron Sources	353
12.4	Other Neutron Sources	357
	References	363
13	Fusion Neutronics Experiments	365
