

# Contents

<b>1</b>	<b>Introduction</b> .....	1
1.1	General Introduction .....	1
1.2	Outline and Scope .....	3
<b>2</b>	<b>Review of Gyro-Devices</b> .....	7
2.1	Introduction .....	7
2.2	Classification of Fast Wave Microwave Sources .....	8
2.2.1	Gyrotron Oscillator and Gyroklystron Amplifier .....	11
2.2.2	Cyclotron Autoresonance Maser (CARM) .....	12
2.2.3	Gyro-TWT (Travelling Wave Tube) and Gyrotwystron Amplifier .....	16
2.2.4	Gyro-BWO (Backward Wave Oscillator) .....	17
2.2.5	Overview of Gyro-Devices .....	18
2.2.6	Magnicons and Gyroharmonic Converters .....	19
2.2.7	Free Electron Lasers .....	20
2.3	Remarks .....	24
<b>3</b>	<b>Basic Principles and Gyrotron Cavities</b> .....	25
3.1	Basic Principle of Gyrotrons .....	25
3.2	Eigenmodes of Tapered, Open Resonator Cavities .....	31
3.2.1	Physical Model for the High Frequency Fields in a Resonator .....	32
3.2.2	Coaxial Cavity Structures .....	39
3.2.3	Complex Cavities .....	41
3.3	Remarks .....	43
<b>4</b>	<b>Calculation of RF Behaviour</b> .....	45
4.1	Equation of Motion .....	45
4.2	Self-Consistent Calculations .....	57
4.3	Dimensionless Variables .....	62
4.4	Mode Competition in Gyrotron Oscillators .....	67
4.4.1	Energy Transfer to a Single Mode .....	70
4.4.2	Mode Suppression .....	71
4.4.3	Startup .....	72
4.4.4	Time Dependent Formulation .....	74

4.4.5	Current Neutralization .....	75
4.4.6	Mode Competition with Different Harmonics .....	77
<b>5</b>	<b>Practical Considerations for Gyrotron Design</b> .....	<b>83</b>
5.1	Introduction .....	83
5.2	Wall Losses .....	83
5.3	Voltage Depression and Limiting Current .....	87
5.4	Choice of Beam Radius .....	90
5.5	Fresnel Parameter .....	91
5.6	Starting Current .....	91
5.7	Rieke Diagrams for Gyrotrons .....	98
<b>6</b>	<b>Electron Optical and Guiding System</b> .....	<b>103</b>
6.1	Introduction .....	103
6.2	Magnetron Injection Gun .....	103
6.2.1	General Remarks .....	103
6.2.2	Preliminary Design .....	106
6.2.3	Codes for the Design of MIGs .....	108
6.2.4	Design Procedure of MIGs .....	109
6.3	Beam Guidance .....	112
6.4	Beam Dump-Collecting System .....	116
6.4.1	General Remarks .....	116
6.4.2	Theory of Depressed Collectors .....	117
6.4.3	Magnetic Decompression .....	118
6.4.4	Design of Depressed Collectors for Gyrotrons .....	120
6.4.5	Some General Remarks .....	124
<b>7</b>	<b>Output Taper and Quasi-optical Launcher</b> .....	<b>127</b>
7.1	General Remarks .....	127
7.2	Output Taper .....	128
7.2.1	Methods of Taper Analysis and Synthesis .....	129
7.3	Quasi-optical Mode Converter .....	133
7.3.1	Basic Principle of Quasi-optical Mode Converters .....	135
7.3.2	Improved Quasi-optical Mode Converters .....	137
7.4	Concluding Remarks .....	145
<b>8</b>	<b>RF Window</b> .....	<b>147</b>
8.1	General Remarks .....	147
8.2	Practical Aspects of High Power Windows .....	148
8.3	Theory of Disc Type Windows .....	152
8.4	Broadband Output Windows .....	155
8.5	Diamond Windows for Gyrotrons .....	157
8.6	Concluding Remarks .....	160
<b>9</b>	<b>Examples</b> .....	<b>163</b>
9.1	General Remarks .....	163
9.2	A Very High-Power, 140 GHz Conventional Gyrotron .....	164
9.3	A 165 GHz Coaxial Gyrotron .....	169
9.4	Multifrequency Gyrotron .....	172
9.5	Second Harmonic Gyrotrons .....	176
9.6	Concluding Remarks .....	181
<b>10</b>	<b>Applications</b> .....	<b>183</b>
10.1	Introduction .....	183
10.2	ECRH Applications .....	185
10.3	ECR Discharges for Generation of Multiply Charged Ions and Soft X-Rays .....	186
10.4	High Frequency Broadband ESR Spectroscopy .....	188
10.5	Processing of Advanced Ceramics .....	190
10.5.1	Experimental Setup .....	192
10.5.2	Experimental Results .....	194
10.6	Millimeter-Wavelength Radar .....	199
10.6.1	Active Millimeter Wave Meteorology-Cloud Radar .....	200
10.6.2	Space Debris Monitoring Radar .....	202
10.6.3	High Power Nanosecond Radar .....	202
10.7	RF-Drivers for TeV Linear Colliders .....	204
	<b>References</b> .....	<b>207</b>
	<b>Index</b> .....	<b>225</b>
