<i>Foreword to the Second Edition</i>	v
1. Basic Concepts and Historical Background	1
1.1 Space and Astrophysics	2
1.2 World War II, Teller 1952	5
1.3 Controlled Nuclear Fusion	6
1.4 Magnetic Confinement Conditions for Nuclear Fusion	6
1.5 Nature of Plasma Turbulence	7
1.6 Dominant Plasma Energy Loss Mechanism	14
1.7 Optimization of Plasma Cross-Sectional Shape	15
1.8 Reversed Magnetic Shear Control of Transport	18
1.9 Designs for High-Performance H-mode Confinement	21
1.10 Helical Magnetic Confinement Systems	21
2. Alfvén and Drift Waves in Plasmas	25
2.1 Low-Frequency Wave Dispersion Relations	26
2.2 Reduction of the Kinetic Dispersion Relation	36
2.3 Drift Waves	38
2.4 Kinetic Alfvén Waves	39
2.5 Coupling of the Drift Wave, Ion-Acoustic and Shear Alfvén Waves	39
2.5.1 Electrostatic drift waves	40
2.6 Drift Wave Eigenmodes in a Sheared Magnetic Field	41
2.7 Symmetries of the Drift Wave Eigenmodes	44
2.8 Outgoing Wave Boundary Conditions	44
2.8.1 Localized ion drift modes	47
2.9 Ion-Acoustic Drift Wave Turbulence	49
2.9.1 Electromagnetic scattering measurements of plasma waves	49
2.9.2 Two-point correlation functions in turbulence	51
2.9.3 Drift wave spectral distributions	52

2.10	RF Scattering from ETG Turbulence . . . . .	55	5.1.2	Conservation form of MHD . . . . .	126
2.11	Internal Ion Transport Barriers from Reversed Rotational Transforms . . . . .	56	5.1.3	MHD stable plasmas and bifurcations . . . . .	129
2.12	Drift Waves in LHD and the Wendelstein 7-X Stellarator . . . . .	57	5.2	Interchange Stability Condition . . . . .	132
2.13	Edge-Localized Modes (ELMs) Imaged with ECE Diagnostics . . . . .	58	5.2.1	Plasma energy functional of MHD . . . . .	133
3.	Mechanisms for Drift Waves . . . . .	61	5.2.2	Limitations of the MHD model . . . . .	134
3.1	Drift Wave Turbulence . . . . .	61	5.3	Double Adiabatic Pressure Tensor for Anisotropically Heated Plasmas . . . . .	136
3.2	Drift Wave Mechanism . . . . .	63	5.4	Ballooning Interchange Modes and the Trapped Particle Instability . . . . .	140
3.3	Energy Bounds for Turbulence Amplitudes . . . . .	63	5.5	Trapped Particle Dynamics and Instabilities . . . . .	141
3.3.1	Density gradients . . . . .	63	5.6	Discovering the Trapped Particle Instability . . . . .	142
3.3.2	Temperature gradients . . . . .	65	5.6.1	Parallel particle dynamics . . . . .	144
3.3.3	Drift wave eigenmodes in toroidal geometry . . . . .	68	6.	Turbulence in Helical Magnetic Fields . . . . .	149
3.3.4	Effect of magnetic shear and $E_r$ shear on drift waves . . . . .	73	6.1	Helimak Geometry and Plasma Dynamics . . . . .	150
3.4	Weak Turbulence Theory for Drift Waves . . . . .	76	6.1.1	Turbulence data in Argon plasmas . . . . .	152
3.5	Ion Temperature Gradient Driven Turbulence . . . . .	80	6.1.2	Varicose and sinuous M-modes in the Helimak . . . . .	153
3.6	First Experiments for Drift Waves . . . . .	84	6.1.3	Unstable magnetized flows in the Helimak . . . . .	155
3.7	Drift Waves Paradigms: Hasegawa-Mima and Hasegawa-Wakatani Models . . . . .	86	6.1.4	Stability analysis for the Helimak . . . . .	157
3.8	Rotational Instabilities and Momentum Transport . . . . .	92	6.1.5	Linearized resistive-viscous magnetohydrodynamic equations . . . . .	158
3.9	Rotation in Cylindrical Plasmas . . . . .	94	6.1.6	Sinuous, varicose and resistive varicose modes . . . . .	162
3.9.1	Shear Alfvén wave stabilization of the rotational instabilities . . . . .	99	6.1.7	A magnetohydrodynamic Squire Theorem . . . . .	163
4.	Two-Component Magnetohydrodynamics . . . . .	103	6.2	Turbulence in Toroidal Geometry with Helical Magnetic Fields . . . . .	163
4.1	Collisional Transport Equations . . . . .	103	6.3	Density of Rational Surfaces and the KAM Tori . . . . .	166
4.2	Current, Density and Temperature Gradient Driven Drift Modes . . . . .	107	6.3.1	Overlapping radial eigenmodes . . . . .	167
4.2.1	Ion acoustic waves and the thermal mode . . . . .	108	6.3.2	Limitations of the MHD model and the fluid moments closure problem . . . . .	170
4.2.2	Ion temperature gradient instability . . . . .	108	6.4	Reduction of the Toroidal Electric Field Driven Dynamics . . . . .	172
4.3	Closure Models for Coupled Chain of Fluid Moments . . . . .	109	6.5	Effect of Dust on Drift Instability in Edge Fusion Plasmas . . . . .	175
4.4	Pressure Gradient Driven Instabilities . . . . .	109	7.	Turbulence Theory for Drift and Alfvén Waves . . . . .	179
4.4.1	Scale invariance properties arising from Ohm's law with electron inertia . . . . .	115	7.1	General Considerations: Analogs with Geophysical Fluids . . . . .	179
4.4.2	Scaling of correlation length and time . . . . .	117	7.2	Consequences of Sheared Flows on the Drift Wave Spectrum . . . . .	184
4.4.3	Magnetic flutter thermal transport . . . . .	118	7.3	Ion Temperature Gradient Induced Transport . . . . .	184
4.4.4	Electron inertia replacing Ohm's law . . . . .	118	7.4	Drift-Wave Turbulence in Edge Plasma . . . . .	187
4.5	Momentum Stress Tensor Stability Analysis . . . . .	119	7.5	Inertial Spectral Ranges in 2D and 3D Turbulence . . . . .	188
4.6	Kinetic Ballooning Mode Instability . . . . .	119	8.	Impurity Transport Studies . . . . .	193
5.	Magnetohydrodynamics and Magnetic Confinement Geometries . . . . .	123	8.1	Drift Waves with Impurity Ions . . . . .	194
5.1	The MHD-Magnetohydrodynamic Model . . . . .	123	8.2	Drift Wave Eigenmodes with Active Impurity Components . . . . .	197
5.1.1	MHD equations . . . . .	124	8.2.1	Eigenmodes and the quasilinear fluxes with impurities . . . . .	198

8.3	Three-Component Fluid Equations . . . . .	202	10.2.2	Electromagnetic dispersion relation for cross-field beam injected plasma . . . . .	266
8.3.1	Reduction of three-component fluid equations . . . . .	203	10.3	Quasilinear Fluctuation Diffusion Tensor . . . . .	267
8.3.2	Impurity transport from trapped electron modes inside the SOL . . . . .	205	10.4	Electron Transport from Magnetic Flutter . . . . .	268
8.3.3	Spectral expansion of the nonlinear fields for turbulent impurity transport . . . . .	206	10.4.1	Polarization and transport for low-frequency electromagnetic fluctuations . . . . .	268
8.4	Impurity Transport in High-Density Regimes . . . . .	208	10.4.2	Anomalous transport due to magnetic fluctuations . . . . .	269
8.5	Trace Impurity Transport Studies . . . . .	208	10.4.3	Transport from static magnetic fluctuations . . . . .	274
8.6	Thermalization of Impurities and their Collisional Fluxes . . . . .	212	10.5	RF wave propagation and scattering in turbulent plasmas . . . . .	278
8.7	Scandium and Titanium Transport with Ionization and Recombination . . . . .	214	11.	Toroidal Confinement Systems . . . . .	281
8.8	Divertor Designs for Impurity Control . . . . .	215	11.1	Alternative Toroidal System with High-Temperature Plasmas . . . . .	281
8.9	Impurity Fluxes in JET and ASDEX-U Divertor Plasmas . . . . .	216	11.2	Helical Toroidal Systems . . . . .	284
8.9.1	Tungsten transport in JET with ITER-like walls . . . . .	220	11.3	Neoclassical Dynamics and Transport in Toroidal Systems . . . . .	286
8.10	ICRH Control of Turbulent Impurity Pinch in Divertor Tokamaks . . . . .	220	11.4	Large Helical System Fields and Transport . . . . .	287
8.11	Dust Transport from Vessel Wall Erosion . . . . .	221	11.4.1	Fluctuations in the ballooning mode representation . . . . .	287
8.12	Plasma-Wall Interactions in Long-Pulse Fusion Plasmas . . . . .	225	11.4.2	Drift waves in the ballooning representation . . . . .	289
8.13	Heat Load Limits on the Metal Surfaces of the Confinement Vessel . . . . .	227	11.5	Wendelstein 7-X Stellarator . . . . .	291
9.	Coherent Structures in Plasmas . . . . .	229	11.5.1	Toroidal Alfvén Eigenmodes . . . . .	292
9.1	Kelvin–Helmholtz Instability and Vortices in Magnetized Plasma . . . . .	229	11.6	Gyrokinetic Simulation of Zonal Flows and Ion Temperature Gradient Turbulence in Helical Systems . . . . .	295
9.2	Drift Wave Models for LAPD . . . . .	231	12.	Temperature Gradient Driven Instabilities . . . . .	297
9.2.1	The vorticity probe . . . . .	237	12.1	Ion Temperature Gradient Instabilities . . . . .	298
9.2.2	Vorticity probe measurements in the Kelvin–Helmholtz instability . . . . .	239	12.2	Mechanism of the Ion Temperature Gradient Instabilities . . . . .	300
9.2.3	Kelvin–Helmholtz turbulence with drift waves . . . . .	243	12.2.1	Nyquist analysis . . . . .	305
9.3	Experimental Measurement of Vorticity Dynamics and the Reynolds Stress . . . . .	244	12.2.2	Full $3 \times 3$ electromagnetic ion temperature gradient modes . . . . .	307
9.4	Electromagnetic Plasma Vortices . . . . .	246	12.2.3	Limiting cases of the electromagnetic ITG dispersion relation . . . . .	308
9.4.1	Large-scale Alfvén vortex structures . . . . .	247	12.2.4	Ion temperature gradient and trapped electron transport . . . . .	308
9.4.2	Emission of plasma filaments and vortices in the scrape-off layer . . . . .	250	12.3	Analytical TEM-ITG Drift-Wave Model . . . . .	309
9.5	Formation of Blobs from a Pure Interchange Process . . . . .	255	12.3.1	Nonadiabatic electron response functions . . . . .	310
9.6	Further Comments on Alfvén-Drift Wave Vortices . . . . .	258	12.4	Internal Transport Barriers for ITG/TEM Models . . . . .	314
10.	Fluctuating Magnetic Fields and Transport . . . . .	259	12.5	The Weiland ITG/TEM Transport Model . . . . .	320
10.1	Kinetic Theory Formulas for the Fluctuating Electromagnetic Fields . . . . .	260	12.6	Zonal flows and ion temperature gradient instabilities in multiple- helicity magnetic fields . . . . .	324
10.2	Requirements for Self-Consistent Fluctuating Fields . . . . .	263	12.6.1	Formation of ITB in gyrokinetic ITG turbulence . . . . .	325
10.2.1	Dispersion relation for two-temperature Maxwellian distribution . . . . .	264	13.	Electron Temperature Gradient Driven Turbulence . . . . .	327
			13.1	Electron Transport and the Critical Temperature Gradient . . . . .	327
			13.2	Electron Temperature Gradient Transport . . . . .	338

13.2.1	Two-space scales for electron transport . . . . .	339	14.9	High- $\beta$ Disruptions in Tokamaks from Explosive Instabilities . . . .	409
13.2.2	Nonadiabatic ion response . . . . .	340	15.	Fusion Power in Multiscale Plasma Turbulence . . . . .	411
13.3	Electron Thermal Transport in TCV . . . . .	341	15.1	Confinement for Compact High-Field Tokamaks . . . . .	411
13.3.1	I-mode for improved confinement regimes . . . . .	343	15.1.1	Central solenoid and plasma current densities . . . . .	412
13.3.2	Average relative variance . . . . .	344	15.1.2	Simulations for IGNITOR . . . . .	415
13.4	ECRH Driven Plasmas . . . . .	345	15.1.3	Transition to a burning D-T plasma . . . . .	417
13.5	Electron Temperature Gradient Turbulence Modeling . . . . .	350	15.2	Single X-point Divertor Tokamaks . . . . .	419
13.6	Validation Analysis of the Electron Transport Modeling . . . . .	353	15.3	Tokamak Confinement Time Based on the L-mode Database . . . .	421
13.7	LHCD Driven Plasmas with Anisotropic Electron Phase-Space Distribution Functions . . . . .	355	15.4	Improved Confinement Regimes with Peaked Density Profiles: LOC, SOC and IOC Regimes . . . . .	422
13.7.1	Comparison of $T_e$ and $q_{  e}$ gradients . . . . .	357	15.5	Dynamics of Reversed Magnetic Shear Confinement in Fast Current Ramp Discharges . . . . .	426
13.7.2	Kinetic dispersion relation for LHCD plasma . . . . .	358	15.5.1	High-confinement H-modes . . . . .	427
13.7.3	Hydrodynamic-FLR limit of $P^{\text{LHCD}}$ -function . . . . .	358	15.5.2	Turbulent heat diffusivity in transport codes . . . . .	428
13.7.4	Analytic quasilinear RF velocity diffusivity . . . . .	360	15.6	Toroidal Simulations with Transport Codes . . . . .	429
13.7.5	High-power LHCD plateau $F_e$ -distributions . . . . .	361	15.7	Lower-Hybrid and Electron Cyclotron RF Drivers . . . . .	432
13.7.6	RF current drive in WEST . . . . .	362	15.8	RF Control of Fusion Plasmas . . . . .	433
13.7.7	Self-consistent calculation of LH wave damping and the steady-state electron distribution function . . . . .	365	15.8.1	Plasma confinement in TORPEX . . . . .	433
13.7.8	Steady-state RF heating and current drive plasmas in EAST . . . . .	366	15.8.2	Steady-state operation . . . . .	434
15.8.3			15.8.3	Ion cyclotron RF plasma control . . . . .	435
15.8.4			15.8.4	Single null and double null divertors . . . . .	436
14.	Magnetic Reconnection Turbulence . . . . .	375	15.9	Mirror Confinement Fusion Systems . . . . .	437
14.1	Introduction to Magnetic Reconnection (MRC) . . . . .	375	15.10	JET Record Fusion Power Experiments and Future Directions . . .	441
14.1.1	Nonlinear dynamics of the sawtooth events . . . . .	379			
14.1.2	Electron inertia and hyper-resistivity . . . . .	382			
14.2	Explosive Reconnection in Reversed Magnetic Shear Profiles . . . .	384			
14.3	Effects of Drift Wave Turbulence on Magnetic Reconnection . . . .	385			
14.3.1	Two-component reconnection simulations with 5-fields . . . .	386			
14.3.2	Magnetic islands caused by turbulence . . . . .	388			
14.3.3	Formation process for magnetic islands from ITG turbulence . . . . .	389			
14.3.4	Mixing of the eigenmode parities . . . . .	390			
14.3.5	Electron viscosity or hyper-resistivity . . . . .	392			
14.4	Double Tearing Mode in Plasmas with Anomalous Electron Viscosity . . . . .	392			
14.5	Magnetic Reconnection . . . . .	395			
14.6	Internal and Edge Zones of Reduced Transport . . . . .	396			
14.7	Turbulent Impulsive Magnetic Energy Release from Electron Scale Reconnection . . . . .	397			
14.7.1	Electron scale magnetic reconnection model . . . . .	400			
14.8	Rotating Magnetic Island and Locked Modes . . . . .	407			
14.8.1	Shielded 3D magnetic perturbations . . . . .	408
