List of Contributors	ix
Preface	xi
1. Rare-Earth-Free Permanent Magnets: The Past and Future	1
<i>Jeotikanta Mohapatra and Jia Ping Liu</i>	
1 Introduction	1
2 Fundamental Factors in Permanent Magnets	3
2.1 The Intrinsic Parameters	3
2.2 The Extrinsic Parameters	6
2.3 Nanosize Effects	7
3 Early Rare-Earth-Free Permanent Magnets	10
3.1 Alnico Magnets	10
3.2 Hard Magnetic Ferrites	13
4 Manganese-Based Hard Magnetic Phases	16
4.1 MnBi Hard Magnetic Phase	16
4.2 MnAl and MnAlC Hard Magnetic Phases	19
4.3 MnGa Hard Magnetic Phase	21
5 Tetragonal Chemically Ordered $L1_0$ Hard Magnetic Phases	22
5.1 $L1_0$ -FePt and -CoPt Phases	22
5.2 $L1_0$ -FeNi Phase	24
6 Emergent Rare-Earth-Free Hard Magnetic Materials	27
6.1 Nitride-Based Hard Magnetic Materials	27
6.2 Co-Rich Transition-Metal Alloys	28
6.3 Tetragonal FeCo Alloys	30
6.4 Transition-Metal Silicides	33
6.5 Iron Chalcogenides	35
6.6 Iron Oxide (ϵ -Fe ₂ O ₃)	38
6.7 Magnetic Heusler Compounds	38
6.8 Fe-Co-B Compounds	41
7 High-Aspect-Ratio Nanocrystal-Based Hard Magnetic Structures	43
7.1 Co Nanowires	43
7.2 Co-Carbide Nanorods	47
8 Conclusion and Future Perspectives	49
Acknowledgment	50
References	50

2. Magnetic Imaging of Nanostructures Using Off-Axis Electron Holography	59
<i>András Kovács and Rafał E. Dunin-Borkowski</i>	
1 Introduction	60
2 Basis of Off-Axis Electron Holography	60
2.1 Studies of Magnetic Samples in the Transmission Electron Microscope	60
2.2 Historical Background and Basis of Off-Axis Electron Holography	62
2.3 Quantitative Measurements of Magnetic Properties	69
3 Off-Axis Electron Holography of Nanocrystalline Soft Magnetic Alloys and Hard Magnets	72
3.1 Magnetic Domains in Fe-Based Ferromagnetic Alloys	74
3.2 Magnetic Domain Structure in Hard Magnetic Materials	77
4 Off-Axis Electron Holography of Magnetic Nanostructures	79
4.1 Magnetic Interactions in Nanoparticle Assemblies	79
4.2 Lithographically Patterned Nanostructures	87
4.3 One-Dimensional Magnetic Nanowires	92
5 Off-Axis Electron Holography of Naturally Occurring Magnetic Materials	95
5.1 Biominerals at the Nanoscale	95
5.2 Magnetic Interactions in Minerals	100
5.3 Extraterrestrial Magnetic Minerals	104
5.4 Oxidation and Thermomagnetic Properties of Pseudo-Single-Domain Magnetite Particles	107
6 Off-Axis Electron Holography of Magnetic Skyrmions	112
6.1 Bloch-Type Skyrmions in Cubic Chiral Magnets	115
6.2 Sample Preparation for Magnetic Imaging of Bloch-Type Skyrmions in FeGe	117
6.3 Temperature and Magnetic Field Dependence of the Spin Structures of Bloch-Type Skyrmions in FeGe	118
6.4 Skyrmion Formation at Lattice Defects and Grain Boundaries	123
6.5 Stacked Spin Spiral States	127
6.6 Control of Morphology and Formation of Skyrmions in Confined Geometries	127
6.7 Multiple Spin Rotation States in Bloch-Type Skyrmions	132
6.8 The Chiral Bobber—A New Particle-Like State in Chiral Magnets	136
6.9 Quantitative In-Plane Magnetization Measurements of Skyrmions	138
7 Conclusions and Future Prospects	141
Acknowledgments	143
References	143

3. Magnetic Nanowires and Nanotubes	155
<i>Michal Staňo and Olivier Fruchart</i>	
1 Preamble	155
2 Fabrication	157
2.1 Templates	158
2.2 Common Deposition Techniques	161
2.3 Engineered Structures	169
2.4 Summary of Wire/Tube Fabrication	174
3 Magnetic Properties	174
3.1 Micromagnetism in the Cylindrical Geometry	175
3.2 Dipolar Interactions in Dense Arrays of Wires	180
3.3 Magnetic Domains	186
3.4 Magnetic Domain Walls	194
3.5 Ferromagnetic Resonance and Spin Waves	212
3.6 Techniques	217
4 Applications	231
4.1 Biomedical Applications and Catalysis	232
4.2 Hard Magnetic Materials	233
4.3 Magnetic Force Microscopy Tips	234
4.4 Sensors of Magnetic Field Based on Magneto-Impedance	234
4.5 Microwave Applications and Magnonics	234
4.6 Data Storage	235
5 Conclusion and Perspective	236
Acknowledgments	238
Appendix	238
A.1 Symbols	238
A.2 Acronyms	240
References	241
4. Advances in Nd-Fe-B Based Permanent Magnets	269
<i>Hossein Sepehri-Amin, Satoshi Hirosawa, and Kazuhiro Hono</i>	
Nomenclatures and Unit Conversion	270
1 Introduction	270
2 Historical Review of the Development of Nd-Fe-B Permanent Magnets	272
2.1 Invention of Nd-Fe-B Permanent Magnets	272
2.2 Development of Anisotropic Nd-Fe-B Sintered Magnet	274
2.3 Rapidly Solidified Nd-Fe-B Powders and Development of Anisotropic Nd-Fe-B Hot-Deformed Magnets	276
2.4 Development of HDDR-Processed Magnets	279

3	Intrinsic Properties of $R_2Fe_{14}B$ and Their Temperature Dependence	281
3.1	Magnetization and Magnetocrystalline Anisotropy	281
3.2	Effects of Alloying Elements: Partial Fe Replacement	288
3.3	Effects of Alloying 4f Elements	292
4	Thermodynamic Properties of RE-Fe-B Systems	293
5	Microstructure and Magnetic Properties of Nd-Fe-B Based Permanent Magnets	301
5.1	Coercivity Enhancement of Nd-Fe-B Sintered Magnets by Dy Addition	301
5.2	Heavy-Rare-Earth Diffusion Processed Nd-Fe-B Sintered Magnets	302
5.3	Dy-Free Nd-Fe-B Sintered Magnets: General Microstructure and Magnetism of Grain Boundary Phase	303
5.4	Development of Anisotropic Nd-Fe-B Sintered Magnets With Non-Ferromagnetic Grain Boundary Phase	312
5.5	Coercivity Enhancement of Nd-Fe-B Sintered Magnets by Grain Size Reduction	315
5.6	Anisotropic Hot-Deformed Nd-Fe-B Magnets	318
6	Microstructure and Coercivity Relationships	332
6.1	Micromagnetic Parameters	332
6.2	Micromagnetic Simulations	340
7	Summary and Outlook	358
	References	363
	Further Reading	370
	Author Index	373
	Subject Index	405
	Material Index	409
