List of Contributors	xi
Volumes in Series	xiii
Preface	xvii
1. Mn²⁺ EPR spectroscopy for the provenance study of natural carbonates	1
<i>Octavian G. Dului, Vasile Bercu, and Daniel C. Negut</i>	
1.1 Introduction	1
1.2 Provenance and authentication studies of the marble work of arts	3
1.3 EPR spectrum of natural carbonates	6
1.4 EPR in the provenance studies of work of art made of natural carbonates	6
1.5 Conclusions	10
Appendix	10
Acknowledgments	15
References	15
Further reading	19
2. EMR in geology/mineralogy	21
<i>Bernadeta Dobosz and Ryszard Krzyminiewski</i>	
2.1 Introduction	21
2.2 Methodology	23
2.2.1 Samples preparation	23
2.2.2 ESR measurement	23
2.2.3 ESR dating potential	23
2.2.4 Potential problems	25
2.2.5 Additive dose (AD) method	25
2.3 Chosen examples of ESR application in geology, archeology, and mineralogy	27
2.3.1 ESR of corals	27
2.3.2 ESR of mollusk shells	27
2.3.3 Clays and archeological ceramics	28
2.3.4 ESR of flints	30
2.3.5 ESR of quartz	31
2.3.6 ESR of faults activity	31
2.3.7 ESR of foraminifera	32

2.3.8	ESR of cave dripstones	32
2.3.9	ESR of lime mortars	33
2.3.10	ESR of tooth enamel	35
2.3.11	ESR of apatites	37
2.3.12	ESR of marbles	37
	References	39
3.	EPR imaging characterization of the pigment-based organic radicals in plant seeds	47
	<i>Kouichi Nakagawa</i>	
3.1	Introduction	47
3.2	Experimental section	49
3.2.1	Samples	49
3.2.2	Electron paramagnetic resonance (EPR)	50
3.3	EPR results and analyses	50
3.3.1	Apple seeds	50
3.3.2	Soybean seeds	55
3.4	EPR imaging (EPRI) results and analyses	56
3.4.1	Apple seeds	56
3.4.2	Soybean seeds	58
3.5	Summary	59
3.5.1	Apple seeds	59
3.5.2	Soybean seeds	60
	Acknowledgment	60
	References	60
4.	X-band EPR and EPR imaging investigation of sucrose radicals	63
	<i>Kouichi Nakagawa</i>	
4.1	Introduction	63
4.2	Materials and methods	65
4.2.1	Samples	65
4.2.2	Irradiation	65
4.2.3	Electron paramagnetic resonance (EPR)	66
4.2.4	Electron paramagnetic resonance imaging (EPRI)	67
4.3	Results of EPR	69
4.3.1	Sucrose and alanine irradiated with X-rays and particles	69
4.4	Analyses of EPR and EPR imaging (EPRI)	72
4.4.1	Analyses of sucrose radical	72
4.4.2	Irradiation induced radical sites	73
4.4.3	Radical-production cross section	75
4.4.4	Analyses of 2D EPRI	77
4.5	Summary	79
	Acknowledgment	79
	References	80

5.	EPR and double resonances in study of diamonds and nanodiamonds	83
	<i>Boris Yavkin, Marat Gafurov, Mikhail Volodin, Georgy Mamin, and Sergei B. Orlinskii</i>	
5.1	Introduction	83
5.2	Diamonds: Structure, synthesis, and defects	85
5.3	NV centers in macroscopic diamonds	89
5.3.1	Typical EPR spectra	89
5.3.2	Optical spin polarization effect	90
5.3.3	Hyperfine and quadrupole coupling with ^{14}N nucleus	93
5.3.4	Temperature dependence of quadrupole interaction constant	97
5.3.5	Spin relaxation in NV centers	99
5.4	Surface and core centers in nanodiamonds	99
5.4.1	EPR spectroscopy studies	99
5.4.2	ENDOR studies of ND surface functionalization	105
5.5	Conclusion	109
	Acknowledgments	110
	References	110
6.	Aspects of the EPR study on mineralized tissues as related to medicine, dosimetry, and dating	115
	<i>Grzegorz Piotr Guzik, Waclaw Stachowicz, and Jacek Michalik</i>	
6.1	The beginnings	115
6.2	Identity of the stable EPR signal in irradiated bone tissue	117
6.3	Application of stable EPR signal in mineralized tissues exposed to radiation	118
6.4	Application of stable radicals produced in mineralized tissues by ionizing radiation in biomedical research	119
6.5	Remodeling of radiation-sterilized bone grafts	120
6.6	Crystallinity of bone mineral	120
6.7	Bone dosimetry	121
6.8	Archeological application	123
6.9	Detection of irradiated food	123
6.10	Resume	123
	References	124
	Further reading	126
7.	EPR studies of bionanomaterials	129
	<i>Tatyana I. Smirnova and Alex I. Smirnov</i>	
7.1	Introduction	129
7.2	Surface-mediated production of free radicals and radical scavenging properties of nanomaterials	131
7.3	Spin-labeling EPR methods for characterizing ligand-functionalized nanoparticles and hybrid nanostructures	134

7.4 Spin-labeling EPR methods in studies of nanoscale confinements and nanoporous and mesoporous materials	145
7.5 Nanoporous and mesoporous materials as tools to study biomacromolecules by EPR and NMR	147
7.6 Conclusions	151
Acknowledgments	152
References	152
8. EPR in glass ceramics	161
<i>Andris Antuzevics</i>	
8.1 Introduction	161
8.2 Preparation and characterization of glass ceramics	162
8.3 EPR investigations of glass ceramics	166
8.3.1 General aspects of EPR spectroscopy	166
8.3.2 Mn ²⁺	169
8.3.3 Cu ²⁺	170
8.3.4 Cr ³⁺	172
8.3.5 Gd ³⁺	173
8.3.6 Eu ²⁺	178
8.3.7 Er ³⁺	181
8.3.8 Yb ³⁺	182
8.3.9 Other paramagnetic centers	183
Acknowledgments	185
References	185
9. Applications of the spin-trapping technique in the study of the formation of free radicals in the biodiesel degradation process	191
<i>Ana Carolina Gomes Mantovani, Bruno Luiz Santana Vicentin, Daniel Farinha Valezi, and Eduardo Di Mauro</i>	
9.1 Introduction	191
9.1.1 Biodiesel	192
9.2 Materials and methods	195
9.2.1 Biodiesel samples	195
9.2.2 Spin-trapping incubation	195
9.2.3 Species quantification	195
9.2.4 Oxidative stability	195
9.2.5 EMR analysis	195
9.3 Results and discussion	195
9.3.1 Experiments at room temperature	195
9.3.2 Experiments at 70°C	197
9.4 Conclusions	200
References	201

10. Applications of electron magnetic resonance in the study of soils, minerals, and iron oxides	203
<i>Daniel Farinha Valezi, Bruno Luiz Santana Vicentin, Ana Carolina Gomes Mantovani, and Eduardo Di Mauro</i>	
10.1 Introduction	203
10.2 Samples and experimental details	204
10.3 Characterization of soils, minerals, and iron oxides using EMR	205
10.3.1 EMR applied in soil samples fractionated by size and color	205
10.3.2 EMR applied in limestone samples	209
10.3.3 EMR applied on the study of magnetic transition of goethite	211
10.4 Conclusions	215
References	215
Index	219
