<i>Introduction</i>	v
<i>About the Author</i>	xxxiii
<b>1 Boltzmann equation</b>	<b>1</b>
1.1. Heuristic derivation of Boltzmann equation . . . . .	1
1.2. Collision term $(\frac{\delta f}{\delta t})_c$ . . . . .	4
1.3. Chapman–Enskog solution of Boltzmann equation . . . . .	7
1.4. Simple relaxation model of the collision term . . . . .	10
1.5. Moment equations . . . . .	10
1.6. Ideal two-fluid equations . . . . .	14
1.7. Fokker–Planck equation, Landau collision integral . . . . .	16
1.8. Braginskii’s two-fluid equations . . . . .	24
<b>2 Magnetohydrodynamics</b>	<b>33</b>
2.1. Equations of plasma as a lumped single fluid . . . . .	33
2.2. Generalized Ohm’s law . . . . .	35
2.3. Kinematics of continuum mechanics . . . . .	36
2.4. MHD: Dynamics of electrically conducting fluid . . . . .	39
2.5. Magnetohydrodynamic momentum equation . . . . .	41
2.6. Ohm’s law . . . . .	43
2.7. Magnetic pressure and magnetic tension . . . . .	44
2.8. Energy equation . . . . .	46
2.9. Kinematics of magnetic field in a conducting fluid . . . . .	48
2.10. Fluid description of collisionless plasma in a strong magnetic field . . . . .	51
2.11. Lagrangian description of fluid motion . . . . .	54
2.12. Lagrangian operator . . . . .	57
2.13. Waves in ideal MHD flow . . . . .	60
2.14. Derivation of MHD waves from two-fluid equations . . . . .	65

<b>3 Single particle motion in electric and magnetic fields</b>	<b>69</b>	6.3. Energy of electromagnetic wave in plasma . . . . .	216
3.1. Radius of curvature vector . . . . .	69	6.4. Kinetic theory of magnetohydrodynamic waves . . . . .	233
3.2. $E \times B$ drift . . . . .	71		
3.3. Equation for guiding center . . . . .	73		
3.4. Magnetic moment and $\nabla B$ drift . . . . .	76		
3.5. Force acting on a charge having a magnetic moment . . . . .	77		
3.6. Curvature drift . . . . .	78		
3.7. Adiabatic invariant . . . . .	79		
3.8. Multiple time perturbation analysis . . . . .	84		
3.9. Adiabatic invariant derived from Hamiltonian . . . . .	88		
<b>4 Basic equations of Vlasov–Maxwell plasma</b>	<b>91</b>		
4.1. Vlasov equation . . . . .	92	7.1. Dispersive waves . . . . .	241
4.2. Maxwell equations . . . . .	93	7.2. Asymptotic evaluation of Fourier integral and group velocity . . . . .	242
4.3. Conductivity, susceptibility, dielectric permittivity . . . . .	95	7.3. Kinematics of wave, group velocity in three-dimension . . . . .	249
4.4. Dispersion relation . . . . .	97	7.4. Wave energy . . . . .	252
4.5. Causality . . . . .	99	7.5. Nonlinear waves; distortion of wave profile . . . . .	253
4.6. Causality and collisionless damping of plasma wave . . . . .	106	7.6. Inclusion of dispersion; steepening vs dispersion . . . . .	255
<b>5 Mathematical theory of Vlasov equation</b>	<b>123</b>	7.7. Inverse scattering method . . . . .	264
5.1. Rudimentary linear analysis . . . . .	123		
5.2. Characteristic method . . . . .	129		
5.3. Laplace transform method . . . . .	137		
5.4. Plasma dispersion function . . . . .	145		
5.5. Evaluation of the dispersion relation . . . . .	147		
5.6. Physics of Landau damping . . . . .	152		
5.7. Operator method 1 . . . . .	160		
5.8. Operator method 2 . . . . .	162		
5.9. Nyquist criterion . . . . .	163		
5.10. Van Kampen modes . . . . .	165		
5.11. BGK (Bernstein–Greene–Kruskal) wave . . . . .	174		
5.12. Nonlinear prediction: what happen after Landau damping time ( $\gamma_L^{-1}$ ) to the plasma wave? . . . . .	184		
<b>6 Kinetic theory of waves in magnetized plasma</b>	<b>191</b>		
6.1. Electrostatic wave in a magnetized plasma . . . . .	191		
6.2. Dielectric tensor for electromagnetic wave in magnetized plasma . . . . .	203		
		<b>7 Wave</b>	<b>241</b>
		7.1. Dispersive waves . . . . .	241
		7.2. Asymptotic evaluation of Fourier integral and group velocity . . . . .	242
		7.3. Kinematics of wave, group velocity in three-dimension . . . . .	249
		7.4. Wave energy . . . . .	252
		7.5. Nonlinear waves; distortion of wave profile . . . . .	253
		7.6. Inclusion of dispersion; steepening vs dispersion . . . . .	255
		7.7. Inverse scattering method . . . . .	264
		<b>8 Two-stream instability</b>	<b>281</b>
		8.1. Analysis of two-stream instability . . . . .	282
		8.2. Absolute instability and convective instability I . . . . .	286
		8.3. Absolute instability and convective instability II . . . . .	290
		<b>9 Parametric instability</b>	<b>299</b>
		9.1. Coupled mode parametric instability . . . . .	300
		9.2. Physical derivation of coupled wave equations . . . . .	313
		9.3. Parametric decay instability and nonlinear Landau damping . . . . .	318
		9.4. More on oscillating two stream instability (OTSI) . . . . .	319
		9.5. Two-time scale analysis of parametric interaction . . . . .	321
		9.6. Various parametric processes . . . . .	323
		9.7. Unified theory of parametric instability . . . . .	327
		9.8. Parametric instability by time-oscillating pump: kinetic theory . . . . .	331
		9.9. Nonlinear Landau damping: kinetic theory of parametric decay instability . . . . .	334
		9.10. Nonlinear dispersion relation for parametric decay instability . . . . .	338
		9.11. Parametric instability due to an oscillating electric field in a magnetized plasma: kinetic theory . . . . .	341
		9.12. Compact form of the dispersion relation of parametric instability in a magnetized plasma . . . . .	344

<b>10 Nonlinear theory of Vlasov equation</b>	<b>355</b>	<b>14 Kinetic theory of surface wave</b>	<b>541</b>
10.1. Quasilinear theory . . . . .	355	14.1. Semi-infinite plasma . . . . .	542
10.2. Nonlinear theory of Vlasov–Poisson plasma . . . . .	367	14.2. Plasma slab . . . . .	550
10.3. Plasma echo . . . . .	386	14.3. Evaluation of the semi-infinite plasma electrostatic surface wave dispersion relation . . . . .	562
<b>11 Discrete charge effects</b>	<b>395</b>	14.4. Surface waves in magnetized Vlasov plasma . . . . .	571
11.1. Potential due to a point charge placed in an isotropic plasma . . . . .	396	14.5. Echoes in a semi-bounded plasma . . . . .	596
11.2. Potential due to an oscillating charge . . . . .	398	14.6. Penetration of electric field into a plasma slab . . . . .	616
11.3. A moving external charge introduced into plasma . . . . .	400		
11.4. Initial value problem formulation . . . . .	401		
11.5. Statistical evaluation of fluctuating variables . . . . .	407		
11.6. Cerenkov radiation . . . . .	411		
11.7. Fluctuation-dissipation theorem . . . . .	414		
11.8. Alternative derivation . . . . .	421		
11.9. Electromagnetic fluctuation . . . . .	425		
11.10. Fluctuation of electrostatic field in a magnetized plasma . . . . .	430		
<b>12 Kinetic theory: Liouville, Klimontovich, Lenard–Balescu</b>	<b>435</b>	<b>15 Dusty plasmas</b>	<b>621</b>
12.1. Klimontovich equation . . . . .	435	15.1. Charging process in dusty plasmas . . . . .	621
12.2. Liouville equation for a many-particle distribution function . . . . .	437	15.2. Moment equations of a dusty plasma . . . . .	624
12.3. BBGKY hierarchy equation . . . . .	442	15.3. Waves in a dusty plasma . . . . .	627
12.4. Klimontovich hierarchy . . . . .	448	15.4. Kinetic theory . . . . .	628
12.5. Lenard–Balescu equation . . . . .	453		
12.6. Alternative derivation of Lenard–Balescu equation . . . . .	464		
12.7. Electric field fluctuation . . . . .	475		
<b>13 Surface wave</b>	<b>479</b>	<b>Appendix A: Fourier transform, delta function, and useful formulas</b>	<b>635</b>
13.1. Surface waves derived from the two-fluid equations . . . . .	480	A.1. Fourier transform, delta function . . . . .	635
13.2. Surface waves in a moving plasma: $v_0 \parallel k$ . . . . .	493	A.2. Convolution integral . . . . .	641
13.3. Surface waves in single fluid . . . . .	514	A.3. Derivation of Plemelj formula . . . . .	643
13.4. Surface waves in MHD fluid . . . . .	524	A.4. First order linear differential equation . . . . .	644
13.5. Theory of shallow water wave . . . . .	530	A.5. Harmonic series . . . . .	645
13.6. Nonlinear surface waves and the operator method . . . . .	536	A.6. Differentiation of an integral: Leibnitz's rule . . . . .	646
		<b>Appendix B: Multiple scale perturbation analysis</b>	<b>649</b>
		<b>Appendix C: Strained coordinate perturbation method</b>	<b>653</b>
		<b>Appendix D: Equation of motion in a rotating frame of reference</b>	<b>657</b>
		<b>Appendix E: Wiener–Hopf method</b>	<b>661</b>
		<b>Bibliography</b>	<b>673</b>
		<b>Index</b>	<b>681</b>
