

# Contents

<b>1</b>	<b>Introduction</b> .....	1
1.1	Basic Thermodynamic Concepts .....	3
1.2	Ensembles .....	9
1.3	The Microcanonical Ensemble .....	10
1.4	The Level Density .....	10
1.5	Temperature and Boltzmann Factor .....	14
1.6	The Canonical Ensemble .....	19
1.7	Mean Values in the Canonical Ensemble .....	23
1.8	The Grand Canonical Ensemble .....	24
	Exercises .....	27
<b>2</b>	<b>The Relation Between Classical and Quantum Statistics</b> .....	31
2.1	Fermi and Bose Statistics of Independent Particles .....	34
2.2	Classical Phase Space .....	37
2.3	A Few Elementary and Useful Results from Classical Statistical Mechanics .....	39
2.4	Semiclassical Calculations of Spectra .....	41
2.5	Quantum Corrections to Interatomic Potentials .....	42
2.6	Classical Limits, Example 1: The Harmonic Oscillator .....	45
2.7	Classical Limits, Example 2: A Free Particle .....	47
2.8	Classical Limits, Example 3: A Particle in the Earth Gravitational Field .....	49
	Exercises .....	51
<b>3</b>	<b>Microcanonical Temperature</b> .....	53
3.1	Definition .....	53
3.2	Finite Size Heat Bath .....	56
3.3	Level Densities and Canonical Partition Functions .....	63
	Exercises .....	68

<b>4</b>	<b>Thermal Properties of Vibrations</b>	71
4.1	Normal Modes	71
4.2	Thermal Properties of Harmonic Oscillators	78
4.3	Debye Particles	81
4.4	Degenerate Oscillators	86
4.5	The Beyer-Swinehart Algorithm	89
4.6	Vibrational Level Densities from Canonical Quantities	91
4.7	Other Computational Schemes	92
4.8	Level Densities from Bulk Properties	93
	Exercises	94
<b>5</b>	<b>Rate Constants for Emission of Atoms and Electrons</b>	97
5.1	Atomic Evaporation	100
5.2	Rate Constants with Microcanonical Temperatures	104
5.3	Large Fragments	107
5.4	RRKM Theory	114
5.5	Electron Emission	116
5.6	Kinetic Energy Release in Unimolecular Reactions	118
5.7	Kinetic Energy Release in RRKM Theory	126
	Exercises	127
<b>6</b>	<b>Radiation</b>	131
6.1	Photon Level Density	131
6.2	The Photon Emission Rate Constants	133
6.3	IR Emission	137
6.4	Photon Emission from a Metal Particle	141
6.5	Recurrent Fluorescence	142
	Exercises	145
<b>7</b>	<b>The Evaporative Ensemble</b>	147
7.1	Decay of Isolated Particles	148
7.2	Abundances, Small Particles	158
7.3	Evaporation of Large Standard Particles	168
7.4	Rates for Large Particles; General Case	172
7.5	Large Particle Abundances	182
7.6	Kinetic Energy Release Revisited	183
7.7	Metastable Decay Fractions	186
7.8	Radiative Cooling	190
7.9	Action Spectroscopy	198
	Exercises	201
<b>8</b>	<b>Abundance Distributions; Large Scale Features</b>	205
8.1	Liquid Drop Energies	205
8.2	The Partition Functions	213
8.3	Thermal and Chemical Equilibrium	218

8.4	Polymerization	221
8.5	The Smoluchowski Equation	225
8.6	Conditions for Irreversible Aggregation	229
8.7	The Break-up Terms	233
8.8	Solution of the Aggregation Equation	234
8.9	Supersaturated Gases and the Critical Size	241
8.10	Nucleation	245
	Exercises	249
<b>9</b>	<b>Molecular Dynamics and Monte Carlo Simulations</b>	253
9.1	Basics of Molecular Dynamics Simulations	255
9.2	Thermostats in MD Simulations	258
9.3	Measuring Temperature in MD Simulations	260
9.4	Monte Carlo Simulations	268
9.5	Microcanonical MC	273
9.6	Random Number Generation	273
9.7	Optimization: Simulated Annealing	278
9.8	Optimization: Genetic Algorithms	282
	Exercises	284
<b>10</b>	<b>Thermal Excitation of Valence Electrons</b>	287
10.1	Electron Number Fluctuations in the Grand Canonical Ensemble	292
10.2	Thermal Electronic Properties in the Microcanonical Ensemble	295
10.3	The Odd-Even Effect	296
10.4	Canonical Properties of the Equidistant Spectrum	299
10.5	High Energy Level Density of the Equidistant Spectrum	306
10.6	Magnetism: The Superparamagnetic Cluster	310
10.7	Numerical Methods	317
10.8	Electronic Shell Structure	322
10.9	An Excursion into Bose-Einstein Statistics	325
	Exercises	328
<b>11</b>	<b>Hot Electron Reactions</b>	331
11.1	The Initial Excitation	332
11.2	Decay of the Hot Electron Phase	334
11.3	Hot Electron Spectra	339
11.4	Ionization Yields	343
11.5	Single Photon Excitation	346
	Exercises	347
<b>12</b>	<b>He Droplets</b>	349
12.1	The Excitation Spectrum	353
12.2	Ripplon Thermal Properties	357

12.3	Molecular Beam Temperatures . . . . .	363
12.4	Phonon Level Density . . . . .	365
12.5	Thermal Properties of the Combined Excitation Spectrum . . . . .	368
	Exercises . . . . .	369
<b>13</b>	<b>Phase Transitions . . . . .</b>	<b>371</b>
13.1	Surface Melting . . . . .	373
13.2	Melting Point Depression . . . . .	376
13.3	Measurements of Heat Capacities as Signatures of Melting . . . . .	378
13.4	The Lindemann Index . . . . .	379
13.5	A Simple Model of Melting . . . . .	382
13.6	Solid-to-Solid Phase Transitions . . . . .	390
	Exercises . . . . .	392
	<b>Appendix A: Additional Reading . . . . .</b>	<b>395</b>
	<b>Appendix B: Constants of Nature and Conversion Factors . . . . .</b>	<b>399</b>
	<b>Appendix C: Mathematical Help . . . . .</b>	<b>401</b>
	<b>Index . . . . .</b>	<b>407</b>
