

Contents

1 Forecasting and Chaos	1
1.1 Historical Introduction	1
1.1.1 The Scientific Method.....	1
1.1.2 Forecasting and Determinism.....	3
1.1.3 Human Knowledge and Decision-Making	9
1.2 Chaotic Dynamics	10
1.3 Computer Numerical Explorations	14
1.3.1 Solving ODEs Numerically.....	15
1.3.2 Solving PDEs Numerically	16
1.3.3 Numerical Forecast.....	17
1.3.4 Reliability and Stability of Numerical Schemes	20
1.3.5 Stiffness.....	22
1.3.6 Symplectic Integrators	23
1.4 Shadowing and Predictability	25
1.5 Concluding Remarks	28
References	28
2 Lyapunov Exponents	33
2.1 Lyapunov Exponents	33
2.2 The Lyapunov Spectrum	36
2.3 The Lyapunov Exponents Family	38
2.4 Local and Non-local Timescales: Covariant Vectors.....	42
2.5 Finite-Time Exponents	44
2.6 Distributions of Finite-Time Exponents	45
2.7 The Harmonic Oscillator	47
2.8 The Rössler System.....	48
2.9 The Hénon-Heiles System.....	55
2.10 Concluding Remarks	66
References	66

3	Dynamical Regimes and Timescales	71
3.1	Temporal Evolution.....	71
3.2	Regime Identification	72
3.3	Transient Behaviours, Sticky Orbits and Transient Chaos	74
3.4	The Hénon-Heiles System.....	75
3.5	The Contopoulos System.....	78
3.6	The Rössler System.....	90
3.7	Hyperbolicity Characterisation Through Finite-Time Exponents ...	92
3.8	Concluding Remarks	96
	References	97
4	Predictability	101
4.1	Numerical Predictability	101
4.1.1	Predictability, Attractors and Basins	101
4.1.2	Predictability and Trajectories	104
4.2	The Predictability Index	107
4.2.1	The Hénon-Heiles System	109
4.2.2	The Contopoulos System	117
4.2.3	The Rössler System	120
4.3	Concluding Remarks	125
	References	128
5	Chaos, Predictability and Astronomy	131
5.1	Introduction	131
5.2	Numerical Forecasting in Astronomy	131
5.3	Time Series Analyses.....	135
5.4	Celestial Mechanics	137
5.5	Sitnikov Problem	138
5.6	Predictability and Stability in the Solar System.....	140
5.7	Stellar Systems.....	144
5.8	Concluding Remarks	148
	References	148
6	A Detailed Example: Galactic Dynamics	151
6.1	Introduction	151
6.2	Chaos in Galactic Astronomy	152
6.3	Predictability in a Galactic System	153
6.4	Role of Dark Matter Haloes in Predictability	163
6.4.1	Galactic Orbits.....	164
6.4.2	Role of the Dark Halo Orientation.....	165
6.4.3	Role of the Dark Halo Flattening	174
6.5	Analysis of the Results	179
6.5.1	Dark Halo Orientation.....	181
6.5.2	Flattening	182
6.6	Concluding Remarks	183
	References	186

A	Numerical Calculation of Lyapunov Exponents	189
A.1	The Variational Equation	189
A.2	Selection of Initial Perturbations.....	192
A.3	Other Methods	194
A.4	Practical Implementation for Building the Finite-Time Distributions	195
	References	195
