

Contents

1	Symmetry and Supersymmetry in Quantal Many-Body Systems	1
1.1	Symmetry in Quantum Mechanics	2
1.1.1	Some Definitions	2
1.1.2	Symmetry Transformations	4
1.1.3	Symmetry	6
1.1.4	Degeneracy and State Labeling	6
1.1.5	Dynamical-Symmetry Breaking	8
1.1.6	Isospin in Nuclei	9
1.1.7	Selection Rules	17
1.2	Dynamical Symmetries in Quantal Many-Body Systems	20
1.2.1	Many-Particle States in Second Quantization	20
1.2.2	Particle-Number Conserving Dynamical Algebras	21
1.2.3	Particle-Number Non-conserving Dynamical Algebras	25
1.2.4	Superalgebras	26
1.3	The Algebraic Approach	28
2	Symmetry in Nuclear Physics: The Shell Model	31
2.1	The Nuclear Shell Model	31
2.2	The SU(2) Pairing Model	33
2.3	Seniority in a Single- j Shell	41
2.4	The SU(3) Rotation Model	51
2.5	A Symmetry Triangle for the Shell Model	63
2.6	A Case Study: Seniority and Transition Rates in the Semi-magic Nucleus ^{211}At	63
3	Symmetry in Nuclear Physics: The Interacting Boson Model	71
3.1	The Interacting Boson Model	71
3.2	Dynamical Symmetries	74
3.3	Geometry	78
3.4	Partial Dynamical Symmetries	84
3.5	Core Excitations	93

3.6	A Case Study: ^{112}Cd	95
3.6.1	Early Evidence for Vibrational Structures and Intruder Configurations	95
3.6.2	The $^{110}\text{Pd}(\alpha,2n\gamma)^{112}\text{Cd}$ Reaction and Its Interpretation	95
3.6.3	Studies of ^{112}Cd Using the $(n,n'\gamma)$ Reaction	99
4	Supersymmetry in Nuclear Physics	103
4.1	The Interacting Boson–Fermion Model	104
4.2	Bose–Fermi Symmetries	106
4.3	Examples of Bose–Fermi Symmetries	108
4.4	Nuclear Supersymmetry	111
4.5	A Case Study: Detailed Spectroscopy of ^{195}Pt	114
4.5.1	Early Studies of ^{195}Pt	114
4.5.2	High-Resolution Transfer Studies Using (p,d) and (d,t) Reactions	117
4.6	Supersymmetry Without Dynamical Symmetry	123
5	Symmetries with Neutrons and Protons	129
5.1	Pairing Models with Neutrons and Protons	130
5.2	Interacting Boson Models with Neutrons and Protons	136
5.2.1	s Bosons Only	136
5.2.2	s and d Bosons	139
5.3	The Interacting Boson Model-2	142
5.4	A Case Study: Mixed-Symmetry States in ^{94}Mo	148
5.4.1	The Discovery of Mixed-Symmetry States in Deformed Nuclei	149
5.4.2	Mixed-Symmetry States in Near-Spherical Nuclei	149
5.4.3	Mixed-Symmetry States in ^{94}Mo	150
6	Supersymmetries with Neutrons and Protons	157
6.1	Combination of F Spin and Supersymmetry	157
6.2	Examples of Extended Supersymmetries	160
6.3	One-Nucleon Transfer in Extended Supersymmetry	162
6.4	A Case Study: Structure of ^{196}Au	165
6.4.1	First Transfer-Reaction Experiments	165
6.4.2	New Experiments at the PSI, the Bonn Cyclotron, and the Munchen Q3D Spectrometer	167
6.4.3	Recent High-Resolution and Polarized-Transfer Experiments	171
6.4.4	Comparison with Theory	171
6.4.5	Two-Nucleon Transfer Reactions	174
7	Supersymmetry and Supersymmetric Quantum Mechanics	179
7.1	The Supersymmetric Standard Model	179
7.2	Strings and Superstrings	180

7.3	Supersymmetric Quantum Mechanics	182
7.3.1	Potentials Related by Supersymmetry	183
7.3.2	The Infinite Square-Well Potential	185
7.3.3	Scattering Off Supersymmetric Partner Potentials	186
7.3.4	Long-Range Nucleon–Nucleon Forces and Supersymmetry	188
7.3.5	Matrix Approach to Supersymmetric Quantum Mechanics	191
7.3.6	Three-Dimensional Supersymmetric Quantum Mechanics in Atoms	192
8	Conclusion	195
