<i>Contributors</i>	<i>vii</i>
<i>Preface</i>	<i>ix</i>
<b>1. Simulation of atomically resolved elemental maps with a multislice algorithm for relativistic electrons</b>	<b>1</b>
Stephan Majert, Helmut Kohl	
1. Introduction	2
2. Image formation in the transmission electron microscope	7
3. The multislice method	17
4. Implementation	47
5. Results and discussion	63
6. Summary and outlook	98
7. Supplementary material	101
References	117
<b>2. Reviewing the revised International System of Units (SI)</b>	<b>121</b>
Joaquín Valdés	
1. The revised International System of Units (SI)	121
2. Constants and units since the origins of the Metre Convention	126
3. Defining constants in the revised SI	131
4. Electric kilogram versus atomic kilogram	137
5. The decade that followed the 2005 decision	146
6. Open questions after evidences of unknown systematic effects just before the redefinition of the SI	163
7. Imagining the future	171
8. Conclusions	180
Glossary of acronyms	181
Acknowledgment	182
References	182
<b>3. Electron energy loss spectroscopy in the electron microscope</b>	<b>187</b>
Christian Colliex	
1. Introduction	188
2. Fundamentals of inelastic scattering	190
3. The low-energy loss region: plasmons and interband transitions	205
4. High-energy loss region: inner shell excitations	218
5. Developments in instrumentation	255
6. EELS as a microanalytical tool	271

7. Miscellaneous	293
Acknowledgements	297
Post scriptum	297
References	298
Further reading	304
<i>Index</i>	305
