TABLE OF CONTENTS

Preface v

Acknowledgments vii

1 Introductory Remarks 1
- 1.1 Necessity of Turbulence Modeling . . . 1
- 1.2 Basic Stance on Turbulence Modeling . . . 3
- 1.3 Outline of Book and Guide for Readers . . . 5

2 Hydrodynamic Equations 7
- 2.1 General Conservation Form . . . 7
- 2.2 Mass Equation . . . 9
- 2.3 Momentum Equation . . . 10
  - 2.3.1 Concept of Stress . . . 10
  - 2.3.2 Modeling of Stress . . . 11
  - 2.3.3 Resulting Equations . . . 13
- 2.4 Energy Equation . . . 14
  - 2.4.1 Loss of Kinetic Energy . . . 14
  - 2.4.2 Internal Energy . . . 14
- 2.5 Fundamental Hydrodynamic Concepts . . . 17
  - 2.5.1 Velocity-Strain and Vorticity Tensors . . . 17
  - 2.5.2 Noninertial Frames . . . 21
  - 2.5.3 Helicity . . . 23
  - 2.5.4 Buoyancy Effects . . . 24
- 2.6 Equations for Turbulent Motion . . . 26
  - 2.6.1 Mean Equations . . . 26
  - 2.6.2 Turbulence Equations . . . 27

3 Small-Scale Turbulence 33
- 3.1 Fundamental Concepts . . . 33
  - 3.1.1 Homogeneity . . . 33
  - 3.1.2 Fourier Representation . . . 35
  - 3.1.3 Isotropy and Energy Spectrum . . . 37
- 3.2 Kolmogorov's Power Law . . . 40

3.2.1 Inertial Range 40
3.2.2 Indications of the Inertial Range 42
3.3 Passive-Scalar Spectrum 44
3.4 Breakage of Kolmogorov's Scaling 46
3.4.1 Intermittency Effects 46
3.4.2 Nonequilibrium Effects 49
3.5 Homogeneous Turbulence Theory 51
3.5.1 Historical Development 51
3.5.2 Formulation of DIA 52
3.5.3 Application to Isotropic Turbulence 63
3.5.4 Passive-Scalar Diffusion 71
3.5.5 Paths towards Rectifying Infra-Red Divergence . . . 73

4 Conventional Turbulence Modeling 83
4.1 Algebraic and Second-Order Modeling 83
4.2 Linear Algebraic Modeling 84
4.2.1 Turbulent Viscosity 84
4.2.2 Modeling of Turbulent Transport Equations 86
4.2.3 Model Constants and Logarithmic-Velocity Law . . 92
4.2.4 Asymptotic Solution of K-ε Model 98
4.2.5 Shortfalls of Turbulent-Viscosity Modeling 102
4.3 Higher-Order Algebraic Modeling 106
4.3.1 Lowest-Order Nonlinear Model 106
4.3.2 Higher-Order Nonlinear Models 110
4.3.3 Nonequilibrium Effects on Turbulent Viscosity . . . 115
4.4 Second-Order Modeling 116
4.4.1 Pressure-Velocity-Strain Correlation 117
4.4.2 Destruction and Transport Effects 124
4.5 Relationship between Algebraic and Second-Order Models . 126
4.5.1 Derivation of Lowest-Order Nonlinear Model 127
4.5.2 Consolidation of Infinite Perturbational Solution . . 128
4.6 Modeling of Scalar Diffusion 132
4.6.1 Passive-Scalar Diffusion 132
4.6.2 Second-Order Scalar Modeling 136
4.7 Low-Reynolds-Number Effects 138
4.7.1 Local Reynolds Number 139
4.7.2 Near-Wall Asymptotic Behaviors 140

5 Subgrid-Scale Modeling 145
5.1 Large Eddy Simulation and Subgrid-Scale Modeling 145
5.2 Filtering Procedures 146
5.2.1 Introduction of Filtering 146

5.2.2 Fundamental Properties of Filtering 147
5.2.3 Filtered Equations 149
5.3 Classical Subgrid-Scale Modeling 152
5.3.1 Subgrid-Scale Modeling of One-Equation Type . . . 152
5.3.2 Smagorinsky Model 154
5.3.3 Improvement of Model 157
5.4 Dynamic Subgrid-Scale Modeling 162
5.4.1 Smagorinsky-Type Model 162
5.4.2 Non-Smagorinsky-Type Model 168

6 Two-Scale Direct-Interaction Approximation 173
6.1 Statistical Theory of Turbulent Shear Flow 173
6.2 Multiple-Scale Method 175
6.2.1 Modulation of Frequency 175
6.2.2 Introduction of Multiple Scales 176
6.3 Two-Scale Direct-Interaction Approximation 178
6.3.1 Introduction of Two Scales 178
6.3.2 Fourier Representation 179
6.3.3 Scale-Parameter Expansion 181
6.3.4 Derivation of Turbulent-Viscosity Representation . . 186
6.4 Derivation of Higher-Order Models for Reynolds Stress . . . 197
6.4.1 Second-Order TSDIA Analysis of Reynolds Stress . 197
6.4.2 Relationship between Theoretically-Estimated and Optimized Model Constants 200
6.5 Derivation of Second-Order Models Using Renormalization 202
6.5.1 Renormalization of TSDIA Second-Order Results . . 202
6.5.2 Expansion of Renormalized Model 204
6.6 Modeling of Turbulent Transport Equations 207
6.6.1 Turbulent Energy Equation 207
6.6.2 Energy-Dissipation-Rate Equation 212
6.7 Scalar Transports and Body-Force Effects 215
6.7.1 Scalar Transport 215
6.7.2 Frame-Rotation Effects 224
6.7.3 Buoyancy Effects 237
6.8 Modeling Based on Renormalized Length Scales 243
6.9 Implications in Subgrid-Scale Modeling 246
6.9.1 Nondynamic Subgrid-Scale Modeling 246
6.9.2 Dynamic Subgrid-Scale Modeling 248

7 Markovianized One-Point Approach **255**
7.1 Necessity of Markovianized One-Point Approach 255
7.2 Markovianized Two-Scale Method 256
7.2.1 Scale-Parameter Expansion 256
7.2.2 Markovianization Based on Characteristic Time Scales 257
7.2.3 Derivation of Nonlinear Model for Reynolds Stress . 260

8 Compressible Turbulence Modeling **265**
8.1 Features of Compressible Turbulence 265
8.2 Conventional and Mass-Weighted Ensemble Averaging . . . 267
8.2.1 Basic Properties of Mass-Weighted Averaging 267
8.2.2 Conventional Averaging of Fluid Equations 268
8.2.3 Mass-Weighted Averaging of Fluid Equations 274
8.2.4 Current Compressible Turbulence Modeling 275
8.3 TSDIA Analysis of Compressible Flow 277
8.3.1 Key Mathematical Procedures 278
8.3.2 Mathematical Structures of Correlation Functions . 283
8.4 Markovianized Two-Scale Approach to Compressible Flows 287
8.4.1 Modeling Based on MTS Method 288
8.4.2 Simplified Compressible Model 298

9 Magnetohydrodynamic Turbulence Modeling **305**
9.1 Highly Electrically-Conducting Turbulent Flows 305
9.2 Magnetohydrodynamic Approximation 306
9.2.1 Two-Fluid System of Equations 306
9.2.2 One-Fluid System of Equations 308
9.2.3 Constant-Density One-Fluid System 312
9.3 Cowling's Anti-Dynamo Theorem 317
9.3.1 Incompatibility of Axisymmetric Magnetic Fields with Axisymmetric Fluid Motion 318
9.3.2 Plausibility of Turbulent Dynamo 319
9.4 Ensemble-Mean System of Equations 322
9.4.1 Mean-Field Equations 322
9.4.2 Turbulence Equations 323
9.5 Quasi-Kinematic and Counter-Kinematic Approaches 326
9.5.1 Quasi-Kinematic Approach 327
9.5.2 Counter-Kinematic Approach 333
9.5.3 Summary of Dynamo Effects 339
9.6 TSDIA Approach 340
9.6.1 Formalism Based on Elsasser's Variables 340
9.6.2 Calculation of Correlation Functions 347
9.7 MTS Method and One-Point Dynamo Modeling 353

9.7.1 Application of MTS Method 353
9.7.2 One-Point Dynamo Modeling 363
9.8 Supplementary Remarks 367

10 Global Magnetic Fields in Turbulent Motion **371**
10.1 Introductory Remarks 371
10.2 Helicity Dynamo 372
10.2.1 Features of Helicity Effects 372
10.2.2 Typical Magnetic-Field Generation Processes 377
10.3 Cross-Helicity Dynamo 381
10.3.1 Features of Cross-Helicity Effects 381
10.3.2 Differential Rotation and Turbulent State 383
10.3.3 Relationship with Typical Astrophysical Magnetic Fields 384
10.4 Combined Effects of Cross-Helicity and Helicity Dynamos . 392
10.4.1 Influence of Extent of Flow Region 392
10.4.2 Generation of Poloidal Magnetic Field 394
10.5 Rotation Effects on Turbulence Transport 398
10.5.1 Roles of Frame and Differential Rotation 398
10.5.2 Suppression of Turbulence Due to Plasma Rotation . 399

Index **405**
