## **PART I Basic Concept of Nonequilibrium Atmospheric Pressure Plasma Jets (N-APPJs)**

<b>CHAPTER 1 Introduction.....</b>	<b>3</b>
1.1 Atmospheric Pressure Plasma—Equilibrium and Nonequilibrium Plasma.....	3
1.1.1 Definition of Plasma.....	3
1.1.2 Equilibrium and Nonequilibrium Atmospheric Pressure Plasma.....	5
1.2 Atmospheric Pressure Plasma Jets—Equilibrium and Nonequilibrium Plasma Jets.....	6
1.3 Applications of Nonequilibrium Atmospheric Pressure Plasma Jets (N-APPJs) in Medicine.....	7
<b>CHAPTER 2 Nonequilibrium Atmospheric Pressure Plasma                  (N-APP).....</b>	<b>9</b>
2.1 Nonequilibrium Atmospheric Pressure Plasma (N-APP) Sources.....	9
2.1.1 Corona Discharge.....	9
2.1.2 Dielectric Barrier Discharge.....	10
Operation of the Dielectric Barrier Discharge (DBD).....	12
Pulsed Excitation.....	14

2.1.3	Resistive Barrier Discharge.....	15
2.1.4	Resistor-Capacitor Barrier Discharge .....	16
2.2	Nonequilibrium Atmospheric Pressure Plasma Jets (N-APPJs) .....	18
2.2.1	N-APPJ Sources .....	18
	Dielectric-Free Electrode (DFE) Jets .....	20
	DBD Jets.....	20
	DBD-Like Jets .....	21
	Single Electrode (SE) Jets.....	22
	N <sub>2</sub> Plasma Jets .....	23
	Air Plasma Jets.....	23
	Brief Summary.....	25
2.2.2	Dynamics of N-APPJs.....	25
<b>References for Part I .....</b>		<b>27</b>

**PART II Physics of Nonequilibrium Atmospheric Pressure Plasma Jets (N-APPJs)**

<b>CHAPTER 3</b>	<b>Basic Physical Phenomena and Theoretical Models of N-APPJs.....</b>	<b>37</b>
3.1	Overview of Theoretical Descriptions of N-APPJs.....	37
3.2	Approaches to Modelling the Dynamics and Structure of Guided Streamers.....	39
3.2.1	Plasma Governing Equations.....	39
	Species Continuity.....	39
	Drift-Diffusion .....	40
	Electrostatic Potential .....	40
	Electron Energy Transport .....	40
3.2.2	Plasma Chemistry .....	41
3.2.3	Photoionization Model .....	41
<b>CHAPTER 4</b>	<b>Recent Advances in the Physics of N-APPJs.....</b>	<b>49</b>
4.1	Study of Basic Phenomena .....	49
4.1.1	Conductivity of the Dark Channel ...	49
4.1.2	Photoionization and Seed Electrons .....	55

4.1.3	Penning Ionization and Donut Shape .....	75
4.1.4	Repeatability of Plasma Bullet.....	99
4.2	Effect of Discharge Parameters.....	113
4.2.1	Pulse Repetition Rate.....	113
4.2.2	Rise Time of Pulse Voltage .....	117
4.2.3	Pulse Width.....	122
4.2.4	Voltage Polarity.....	128
4.2.5	Diameter, Dielectric Constant, and Shape of the Tube .....	133
4.2.6	Gas Flow Rate .....	149
4.2.7	Applied Voltage Amplitude .....	152
4.2.8	Plasma-Forming Gas .....	152
4.2.9	Surrounding Gas .....	156
4.2.10	Operation Under Variable Pressure .....	162
4.3	Other Physical Effects .....	167
4.3.1	Plasma Plume Propagation .....	167
4.3.2	Plasma Plume Interaction.....	180
4.3.3	Plasma Transfer through a Dielectric.....	183
4.3.4	Manipulation of Plasma Jets .....	186
4.3.5	Media Activated by N-APPJs: Reactive Species and Biological Effects .....	208
<b>References for Part II .....</b>		<b>229</b>

**PART III Diagnostics of Atmospheric Pressure Plasmas**

<b>CHAPTER 5</b>	<b>Introduction to Plasma Diagnostics .....</b>	<b>241</b>
5.1	Fundamental Properties of Plasmas Relevant for Diagnostics.....	241
5.2	Fundamentals of Plasma Spectroscopy.....	243
5.2.1	Interaction of Light and Particles .....	243
5.2.2	Quenching.....	246
5.2.3	Spectral Line Shapes and Their Broadening .....	247
	Natural Line Broadening .....	247
	Collisional Broadening.....	247
	Doppler Broadening .....	249
	Stark Broadening.....	250

	Resonance Broadening in Emission Spectra .....	250
	Instrumental and Saturation Broadening in Absorption Spectra .....	251
5.3	Optical Emission Spectroscopy .....	252
5.3.1	Molecular Spectroscopy .....	252
5.4	Absorption Spectroscopy .....	254
5.4.1	Atomic and Molecular Absorption ..	254
5.4.2	Beer–Lambert Law .....	255
5.4.3	Oscillator Strength: Atomic Density.....	255
5.4.4	Line Strength: Molecular Density ....	257
5.4.5	Effective Absorption Cross-Section: Molecular Density ....	258
5.5	Scattering Techniques .....	259
5.5.1	Rayleigh Scattering.....	260
5.5.2	Thomson and Raman Scattering .....	261
5.6	Fluorescence Techniques .....	263
5.6.1	Single Photon Absorption Laser-Induced Fluorescence .....	264
5.6.2	Two-Photon Absorption Laser-Induced Fluorescence .....	267

## CHAPTER 6 Diagnostics of the Core Plasma..... 271

6.1	Electrical Diagnostics.....	271
6.1.1	Measurement in kHz Discharges .....	271
6.1.2	RF Discharges.....	274
6.1.3	Short Pulsed Discharges.....	276
6.2	Plasma Dynamics—Fast Imaging.....	277
6.3	Electron Properties .....	280
6.3.1	Scattering Techniques.....	281
	Thomson Scattering.....	281
	Scattering of Microwave Radiation ....	283
6.3.2	Electron Properties through Optical Emission Spectroscopy.....	285
	Stark Broadening.....	285
	Bremsstrahlung Continuum.....	286
	Teaming Optical Emission Spectroscopy with Modelling .....	288
6.3.3	Electron Density Measurement Techniques Based on the Refractive Index of Plasma .....	290

6.4	Excited and Ground State Atomic, Molecular, and Ion Species .....	295
6.4.1	Absorption .....	295
6.4.2	Laser Fluorescence and Scattering Methods .....	298
6.4.3	Atomic and Molecular Densities from Optical Emission Spectroscopy .....	300
6.5	Energy Dissipation in the Core Plasma Region .....	302

## CHAPTER 7 Diagnostics of the Plasma Effluent (in Jets)—From Near Field to Far Field..... 307

7.1	Flow Field Diagnostics .....	307
7.1.1	Particle Imaging Velocimetry.....	310
7.2	Short-Living Atoms and Molecules.....	311
7.2.1	Absorption Spectroscopy .....	311
7.2.2	Multi-Pass Absorption and Cavity Enhanced Techniques.....	314
7.2.3	Molecular Beam Mass Spectrometry.....	317
7.2.4	Laser Induced Fluorescence Spectroscopy.....	319
7.2.5	Calibrated Optical Emission Spectroscopy.....	325
7.3	Gas Temperature .....	326
7.3.1	Schlieren .....	326
7.3.2	Laser Schlieren Deflectometry .....	327
7.3.3	Molecule Spectroscopy for Temperature Determination .....	329
7.3.4	Rayleigh Scattering .....	330
7.4	Charged Species.....	331
7.4.1	Molecular Beam Mass Spectrometry.....	331
7.4.2	Surface Charges .....	334
7.5	Electric Field Measurements .....	336
7.6	Energy Dissipation in the Plasma Jet Effluent and Energy Transport to the Far Field Gas Phase.....	339
7.6.1	Multi-Pass Absorption Spectroscopy.....	344

<b>CHAPTER 8 From Plasma to Liquid</b> .....	349
<b>8.1</b> Diagnostics of Liquids.....	349
<b>8.1.1</b> Dye-Based Techniques.....	349
<b>8.1.2</b> Radicals in Gas and Liquid.....	352
<b>8.1.3</b> Plasma Liquid Interface Diagnostics .....	354
<b>8.2</b> Interaction with Liquids .....	355
<b>8.2.1</b> (V)UV Radiation.....	356
<b>8.2.2</b> Flow Effects .....	358
<b>8.2.3</b> Reactive Species .....	359
<b>References for Part III</b> .....	367
<b>PART IV Application of N-APPJs in Medicine – Cancer Applications</b>	
<b>CHAPTER 9 N-APPJs for Cancer Applications</b> .....	393
<b>9.1</b> Introduction .....	393
<b>9.1.1</b> Uses of N-APPJs in Plasma Medicine .....	394
<b>9.1.2</b> Cell Death: Apoptosis and Necrosis....	395
<b>9.2</b> Cancer, Cancer Progression, and Present Therapies.....	395
<b>9.2.1</b> Types of Cancer .....	396
<b>9.2.2</b> Current Treatment Methods .....	396
<b>9.3</b> Destruction of Cancer Cells by N-APPJs .....	397
<b>9.3.1</b> Plasma Activated Media .....	400
<b>9.4</b> Mechanisms of N-APPJs against Cancer Cells ...	403
<b>9.5</b> Selectivity Studies .....	404
<b>9.6</b> Attachment/Reattachment Studies.....	409
<b>9.7</b> <i>In vivo</i> Studies.....	411
<b>9.8</b> RONS Penetration into Tissues.....	412
<b>9.9</b> Conclusions.....	414
<b>References for Part IV</b> .....	415
<b>Index</b> .....	421
