

### Part III Cathodic Arc. Theory

<b>15 Cathode Spot Theories. History and Evolution of the Mechanisms</b>	545
15.1 Primary Studies	545
15.1.1 First Hypotheses	545
15.1.2 Cathode Positive Space Charge and Electron Emission by Electric Field	546
15.1.3 Mechanism of Thermal Plasma and Ion Current Formation	547
15.1.4 Mechanism of “Hot Electrons” in a Metallic Cathode	548
15.1.5 Mechanism of Local Explosion of a Site at the Cathode Surface	551
15.1.6 Emission Mechanism Due to Cathode Surface Interaction with Excited Atoms	552
15.2 Mathematical Description Using Systematical Approaches	554
15.2.1 The First Models Using System of Equations	555
15.2.2 Models Based on Double-Valued Current Density in a Structured Spot	562
15.3 Further Spot Modeling Using Cathode Surface Morphology and Near-Cathode Region	566
15.3.1 Modeling Using Cathode Traces and Structured Near-Cathode Plasma	567
15.3.2 Cathode Phenomena in Presence of a Previously Arising Plasma	573
15.4 Explosive Electron Emission and Cathode Spot Model	579
15.4.1 Primary Attempt to Use Explosive Electron Emission for Modeling the Cathode Spot	580
15.4.2 The Possibility of Tip Explosion as a Mechanism of Cathode Spot in a Vacuum Arc	580
15.4.3 Explosive Electron Emission and Cathode Vaporization Modeling the Cathode Spot	582

15.5	Summary	588
15.6	Main Concluding Remarks	591
	References	592
