<i>Preface</i>	<i>ix</i>
1. Phase-field modeling of fracture	1
Jian-Ying Wu, Vinh Phu Nguyen, Chi Thanh Nguyen, Danas Sutula, Sina Sinaie, and Stéphane P.A. Bordas	
1. Introduction	5
2. Overview of phase-field fracture/damage models	13
3. Theoretical aspects	34
4. 1-D analytical solution	67
5. Finite element discretization and solvers	86
6. Computational aspects	98
7. Numerical examples	112
8. Conclusions	148
Acknowledgments	153
Appendix A. A brief recount on variational calculus	153
Appendix B. Positive/negative projection and its application to phase-field fracture models	155
Appendix C. Thermodynamics	157
Appendix D. Comparison with other gradient-damage models	160
Appendix E. Arc-length (path following) methods	162
References	164
2. Material point method after 25 years: Theory, implementation, and applications	185
Alban de Vaucorbeil, Vinh Phu Nguyen, Sina Sinaie, and Jian Ying Wu	
1. Introduction	187
2. A general MPM for solid mechanics	221
3. Various MPM formulations	249
4. Implementation aspects	276
5. Advanced topics	293
6. Numerical examples	321
7. Conclusions	353
Acknowledgments	356
Appendices	356
Appendix A. The method of manufactured solutions (MMS)	356
Appendix B. Constitutive models	361

Appendix C. An alternative CPDI derivation	368
Appendix D. Moving least square approximations	370
Appendix E. Utilities	373
Appendix F. Explicit Lagrangian finite elements	376
References	381
