<i>Contributors</i>	<i>vii</i>
1. Dynamic high-resolution optical trapping of ultracold atoms	1
Guillaume Gauthier, Thomas A. Bell, Alexander B. Stilgoe, Mark Baker, Halina Rubinsztein-Dunlop, and Tyler W. Neely	
1. General considerations	2
2. Beam deflection devices	27
3. Digital micromirror devices	41
4. Liquid crystal devices	65
5. Concluding remarks	83
Acknowledgments	88
References	88
2. High-harmonic generation in solids	103
Lisa Ortmann and Alexandra S. Landsman	
1. Introduction	104
2. Understanding HHG in solids	105
3. Applying HHG in solids	135
4. Conclusion and outlook	144
Acknowledgments	146
References	146
3. Laser-cooled molecules	157
N.J. Fitch and M.R. Tarbutt	
1. Introduction	158
2. Choosing molecules and designing laser cooling schemes	160
3. Models of laser cooling	185
4. Laser slowing	205
5. Magneto-optical trapping	212
6. Sub-Doppler cooling	219
7. Magnetic trapping	223
8. Optical traps	229
9. Applications and future directions	237
10. Concluding remarks	248
Acknowledgments	249
References	249

4. Scattering theory with semiclassical asymptotes	263
John S. Briggs and James M. Feagin	
1. Introduction	264
2. Time-dependent scattering theory with semiclassical asymptotes	271
3. Time-independent scattering theory with semiclassical asymptotes	291
4. Multiparticle fragmentation	304
5. Commentary on the IT	312
6. Conclusions	317
Acknowledgments	318
References	318
