Contents

1 Introduction to Atomic Physics in Plasmas 1
1.1 Atomic Physics and Plasma Physics 1
1.1.1 General Characteristics of Radiation Processes 3
1.1.2 Interrelation Between Radiation and Matter 5
1.1.3 Radiative Emission and Volume Plasma Radiative Losses 6
1.1.4 Radiation Trapping and Plasma Radiation Losses in the General Case 9
1.1.5 Excited Atoms Under Plasma Perturbations 19
1.2 Structure of Atoms and Ions 22
1.2.1 Symmetry Properties of the Coulomb Field 22
1.2.2 Allowed and Forbidden Transitions 25
1.2.3 Properties of Highly Charged Ion Spectra 27
1.3 Autoionizing Atomic States 32
1.3.1 Excitation of Core Hole States 32
1.3.2 The Interaction of Discrete States with a Continuum: Fano resonances 33
1.4 Rydberg Atomic Autoionizing and Non-Autoionizing States in Plasmas 36
1.4.1 Rydberg Atomic States 36
1.4.2 Autoionizing Rydberg Atomic States 37
1.4.3 Dielectronic Satellite Accumulation in ns-Laser-Produced Plasmas 38
1.4.4 Transient Three-body Recombination of Dielectronic Satellite Emission 39
1.5 Plasma Spectroscopy 42
1.5.1 Spatial Properties of Dielectronic Satellite Emission . . . 43
1.5.2 Stark Broadening Analysis of Rydberg Dielectronic Satellites 47

1.5.3 Nonlinear Interference Effects in Stark Broadening of Multi-electron Configurations . . . 48
1.5.4 Hollow Ion X-Ray Emission in Dense Plasmas . . . 50
References . . . 54

2 Radiative Characteristics of Polarized Atoms and Ions . . . 59
2.1 Oscillator Strengths . . . 59
2.2 Classical and Quantum Expressions for Einstein Coefficients . . . 66
2.3 Dynamic Polarizability of Atoms . . . 69
2.4 General Relations of Atomic Polarizability . . . 72
2.5 Static Polarizability of Atoms and Ions . . . 75
2.6 Local Plasma Frequency Model of Polarizability of Many Electron Systems . . . 76
2.7 Dynamic Polarizability of Nanoparticles . . . 80
References . . . 84

3 Probabilities of Radiative Transitions . . . 85
3.1 Radiative Transition Cross Sections . . . 85
3.2 Spectral Line Shapes of Atomic Radiative Transitions . . . 89
3.3 Quasi-classical and Quantum Radiative Transition Probabilities . . . 97
3.3.1 Kramers Electrodynamics . . . 97
3.3.2 Discrete Energy Spectrum . . . 102
3.4 Radiative Recombination . . . 107
3.4.1 Kramers Photorecombination Cross Section . . . 107
3.4.2 Radiative Recombination Rates . . . 108
3.4.3 Radiative Losses . . . 110
3.4.4 Generalized Scaled Empirical Formulas for Radiative Recombination Rates . . . 111
3.4.5 Enhanced Radiative Recombination in Storage Rings . . . 116
3.5 Two-Channel Bremsstrahlung in Electron–Atom Collisions . . . 117
3.6 Bremsstrahlung in Many Electron–Atom Collisions and Mass-Independent Radiation . . . 121
3.7 Photoionization . . . 126
3.7.1 General Relations . . . 126
3.7.2 Hydrogen-like Approximation . . . 128
3.7.3 Photoeffect Cross Section in the Born Approximation . . . 132
3.7.4 Local Plasma Frequency Model . . . 133
3.7.5 Approximate Quantum Methods of Calculation of Photoabsorption Cross Sections . . . 136

3.7.6 Rost Hybrid Method . . . 137
3.7.7 Generalized Scaled Empirical Photoionization Cross Sections from K-, L-, M-, N- and O-Shell . . . 139
3.8 Photodetachment from Negative Ions . . . 141
3.9 Phase Control of Photoprocesses by Ultrashort Laser Pulses . . . 143
References . . . 146

4 Radiation Scattering on Atoms, Plasmas, and Nanoparticles . . . 149
4.1 Photon Scattering by a Free Electron . . . 149
4.2 Radiation Scattering on Atoms . . . 152
4.2.1 Classical Description . . . 152
4.2.2 Quantum Description . . . 156
4.3 High-Frequency Radiation Scattering on Atoms . . . 160
4.3.1 Non-dipole Character of Scattering . . . 160
4.3.2 Dynamic Form Factor of an Atom . . . 161
4.3.3 Impulse Approximation in the Theory of Compton Scattering . . . 162
4.4 Scattering on Plasmas . . . 167
4.4.1 General Expression for the Cross Section of Radiation Scattering in Plasmas . . . 168
4.4.2 Radiation Scattering by Plasma Electrons . . . 170
4.4.3 Transient Scattering of Radiation in Plasmas . . . 172
4.4.4 Radiation Scattering by a Plasmon . . . 173
4.5 Scattering on Nanoparticles . . . 176
4.5.1 Mie Theory of Radiation Scattering and Absorption . . . 176
References . . . 179

5 Electron–Atom Collisions . . . 181
5.1 Fermi Equivalent Photon Method . . . 181
5.1.1 Excitation by Electron Impact as Absorption of Equivalent Photons by an Ion . . . 184
5.1.2 Autoionization Decay and Dielectronic Capture . . . 186
5.2 Ionization by Electron Impact . . . 190
5.2.1 Thomson Formula . . . 190
5.2.2 Similarity Function Method for the Ionization Cross-Section . . . 192
5.2.3 Comparison with Experimental Data . . . 195
5.3 Analytical Empirical Formulas for Ionization, Single, and Total Recombination Rates . . . 199
5.3.1 Ionization . . . 199
5.3.2 Three-Body Recombination in Dense Plasmas . . . 200
5.3.3 Radiative Recombination in Dense Plasmas . . . 202

5.4 Classical Consideration of Collisional Excitation of an Atom . . . 204
5.4.1 Fermi Photon Equivalent Method and Oscillator Strength Method . . . 204
5.4.2 Similarity Function Method for Collisional Excitation of an Atom . . . 209
5.4.3 Analytical Empirical Formulas for Excitation and De-excitation Rates . . . 212
5.5 Excitation of Dipole-Forbidden Transitions in Atoms . . . 215
5.5.1 Intercombination Transitions . . . 215
5.5.2 Intermediate Coupling Effects . . . 217
5.6 Analytical Empirical Formulas for Dielectronic Recombination in Dense Plasmas . . . 222
5.6.1 Autoionization, Dielectronic Capture, and Dielectronic Recombination . . . 222
5.6.2 Total Rates of Dielectronic Recombination and Multichannel Approach . . . 225
5.6.3 Dense Plasma and Electric Field Effects on Dielectronic Recombination . . . 237
References . . . 246

6 Atomic Population Kinetics . . . 249
6.1 Generalized Atomic Kinetics of Non-Equilibrium Plasmas Containing Ions of Various Charge States . . . 249
6.1.1 Principles of Atomic Line Emission: The Two-Level Atom . . . 249
6.1.2 The Principles of Ionic Charge State Distributions in Plasmas . . . 252
6.1.3 Characteristics of the Ionic Charge State Distribution . . . 257
6.1.4 Generalized Atomic Population Kinetics . . . 258
6.1.5 Statistical Charge State Distribution Based on Average Occupation Numbers . . . 260
6.2 Characteristic Time Scales of Atomic and Ionic Systems . . . 261
6.2.1 Characteristic Times to Establish Ionization Balance . . . 261
6.2.2 Characteristic Times of Photon Emission . . . 264
6.2.3 Collisional Mixing of Relaxation Time Scales . . . 266
6.3 Reduced Atomic Kinetics . . . 268
6.3.1 Ground States, Single-Excited and Autoionizing Levels: General Considerations . . . 268
6.3.2 The Virtual Contour Shape Kinetic Theory (VCSKT) . . . 269

6.4 Two-Dimensional Radiative Cascades Between Rydberg Atomic States . . . 279
6.4.1 Classical Kinetic Equation . . . 281
6.4.2 Quantum Kinetic Equation in the Quasi-classical Approximation . . . 283
6.4.3 Relationship of the Quasi-classical Solution to the Quantum Cascade Matrix. The Solution in the General Quantum Case . . . 287
6.4.4 Atomic Level Populations for a Photorecombination Source. Quasi-classical Scaling Laws . . . 290
6.5 Two-Dimensional Collisional–Radiative Model of Highly Excited Atomic States . . . 293
6.5.1 Kinetic Model of Radiative–Collisional Cascades . . . 294
6.5.2 The Classical Collision Operator . . . 296
6.5.3 Numerical Solution for Delta-Function Source . . . 299
6.5.4 Radiation Recombination Population Source . . . 299
6.5.5 Intensities of Rydberg Spectral Lines . . . 301
References . . . 302

7 Quantum Atomic Population Kinetics in Dense Plasmas . . . 305
7.1 Rate Equation and Quantum Populations . . . 305
7.2 Schrödinger Picture . . . 307
7.3 Atomic Density Matrix: Open and Closed Systems . . . 308
7.4 The Electron Collisional Operator $\hat{\Phi}$ . . . 311
7.4.1 Scattering Matrix Representation . . . 311
7.4.2 Electron Collisional Operator in Second-Order Perturbation Theory . . . 313
7.4.3 Reduced Matrix Element Representation . . . 325
7.4.4 Symmetry Properties . . . 330
7.5 Matrix Elements and Atomic Physics Processes . . . 332
7.5.1 Line Strengths and Oscillator Strengths . . . 332
7.5.2 Reduced Matrix Elements and Cross Sections . . . 335
7.6 Magnetic Quantum Number Averages . . . 337
7.6.1 The Rate Equation Case . . . 337
7.6.2 Formal Solution for the Density Matrix Equations . . . 339
7.6.3 The Failure of the Rate Equation Approach for Quantum Averages . . . 342
7.6.4 The Cross Section Method for Quantum Averages . . . 346
7.7 About the Boltzmann Limit in Quantum Kinetics . . . 351
7.7.1 The Two-Level *M*-Quantum-Number-Averaged Level System . . . 351
7.7.2 The Principle of Detailed Balance and Microreversibility . . . 354

7.7.3 Comments to a Two-Level Quantum Kinetics Resolved in M-Quantum Number . . . 358
7.8 The Field Perturbation Operator $\hat{V}$ . . . 359
7.8.1 The Quasi-classical Electric Field Perturbation . . . 359
7.8.2 The Ionic Field Mixing . . . 360
7.8.3 Magnetic Quantum Number Averages and Symmetry Properties . . . 366
7.9 The Quantum Mechanical F-Matrix Theory QFMT . . . 368
7.9.1 Rate Equation and Quantum Populations . . . 368
7.9.2 The Open Two-Level System . . . 369
7.9.3 The Exact QFMT Solution for a Two-Level System . . . 372
7.9.4 Successive Pair Coupling of Quantum Effects . . . 375
7.9.5 QFMT and Statistical Boltzmann Populations . . . 377
7.10 Application to Autoionizing Levels of Highly Charged Ions . . . 382
7.10.1 Dielectronic Satellites Near H-like Lyman-Alpha . . . 382
7.10.2 The Low-Frequency Plasma Microfield . . . 385
7.10.3 The Screened Effective Pair Potential Method in Strongly Coupled Plasmas . . . 386
7.10.4 The Relaxation Rate Approximation of QFMT: QFMT-W . . . 395
References . . . 398

8 Ionization Potential Depression . . . 401
8.1 The Atomic-Solid-Plasma ASP Model . . . 401
8.2 Approximate Solid-State Core Hole Configuration Energies . . . 405
8.3 Ionization Potential Depression Formulas . . . 408
8.4 Optical Electron Finite Temperature Ion Sphere Model OEFTIS . . . 410
8.4.1 Plasma Polarization Shift and Level Disappearance in Dense Hot Plasmas . . . 410
8.4.2 Scaled Ion Sphere Radii and Lattice Structure . . . 414
8.5 Strongly Compressed Matter and Fermi Surface-Rising . . . 416
8.6 Discussion of Different Regimes of Ionization Potential Depression . . . 418
References . . . 421

9 The Plasma Atom . . . 425
9.1 The Thomas–Fermi Statistical Approach . . . 425
9.2 The Local Plasma Frequency Approximation . . . 429
9.2.1 Oscillator Strengths Distribution and Photoabsorption . . . 429
9.2.2 Fermi Equivalent Photon Method and Local Plasma Oscillator Strength . . . 430

9.3 Radiative Losses . . . 433
9.3.1 General Relations . . . 433
9.3.2 Density Effects . . . 435
9.4 Statistical Ionization Cross Sections and Rates . . . 442
9.5 Statistical Dielectronic Recombination Rates . . . 445
9.5.1 General Formula . . . 445
9.5.2 Orbital Quantum Number Averaged Dielectronic Recombination Rates . . . 448
9.5.3 Statistical Burgess Formula . . . 449
9.5.4 Statistical Vainshtein Formula . . . 450
9.5.5 Numerical Comparison of Different Dielectronic Recombination Models . . . 452
References . . . 456

10 Applications to Plasma Spectroscopy . . . 459
10.1 The Emission of Light and Plasma Spectroscopy . . . 459
10.2 Dielectronic Satellite Emission . . . 465
10.2.1 Electron Temperature . . . 465
10.2.2 Ionization Temperature . . . 471
10.2.3 Relaxation Times . . . 473
10.2.4 Spatially Confined Emission . . . 474
10.2.5 Electron Density . . . 475
10.3 Magnetic Fusion . . . 483
10.3.1 Neutral Particle Background and Self-consistent Charge Exchange Coupling to Excited States . . . 483
10.3.2 Natural Neutral Background and Neutral Beam Injection: Perturbation of X-ray Impurity Emission . . . 491
10.3.3 Transient Phenomena in the Start-up Phase . . . 501
10.3.4 Impurity Diffusion and τ-Approximation . . . 504
10.3.5 Non-equilibrium Radiative Properties During Sawtooth Oscillations . . . 509
10.4 Suprathermal Electrons . . . 521
10.4.1 Non-Maxwellian Elementary Atomic Physics Processes . . . 521
10.4.2 Pathological Line Ratios . . . 526
10.4.3 Bulk Electron Temperature . . . 530
10.4.4 Hot Electron Fraction . . . 536
10.5 Space-Resolved Measurements of Fast Ions . . . 542
10.5.1 Spatial Resolution of Plasma Jets . . . 542
10.5.2 Energy Distribution of Fast Ions . . . 546
10.6 Atomic Physics in Dense Plasmas with X-ray Free Electron Lasers . . . 547
10.6.1 Scaling Laws to Move Atomic Populations with XFEL . . . 548

10.6.2 Atomic Kinetics Driven by Intense Short Pulse Radiation . . . 552
10.6.3 Interaction of XFEL with Dense Plasmas . . . 555
10.6.4 Beating the Auger Clock . . . 561
10.6.5 Generalized Atomic Physics Processes . . . 577
References . . . 586

Annexes . . . 593
A.1 Summary of Simple General Formulae of Some Elementary Atomic Physics Processes . . . 593
A.1.1 Transition Energies and Radiative Decay Rates . . . 593
A.1.2 Electron Collisional Excitation and De-excitation . . . 594
A.1.3 Electron Collisional Ionization and Three-Body Recombination . . . 595
A.1.4 Radiative Recombination . . . 595
A.1.5 Dielectronic Recombination . . . 596
A.1.6 Charge Exchange . . . 597
A.1.6.1 Single-electron Charge Exchange . . . 597
A.1.6.2 Multiple-electron Charge Exchange . . . 598
A.2 Simple General Formulae for Collisional-Radiative Processes in Hydrogen . . . 599
A.2.1 Energies . . . 599
A.2.2 Spontaneous Transition Probabilities . . . 599
A.2.3 Radiative Recombination . . . 600
A.2.4 Electron Collisional Excitation and De-excitation . . . 601
A.2.5 Ionization and Three-Body Recombination . . . 604
A.2.6 Matrix Elements Including Phase Sign, Oscillator Strengths, and Energies of nlj-Split Levels . . . 605
A.3 Simple General Formulae for Collisional-Radiative Processes in He^{0+} and He^{1+} . . . 611
A.3.1 Energies . . . 611
A.3.2 Spontaneous Transition Probabilities . . . 612
A.3.3 Radiative Recombination . . . 616
A.3.4 Dielectronic Recombination . . . 618
A.3.5 Electron Collisional Excitation and De-excitation . . . 619
A.3.6 Ionization and Three-Body Recombination . . . 625
A.3.7 Matrix Elements Including Phase Sign, Oscillator Strengths, and Energies of nlj-Split Levels . . . 629
A.4 Ionization Potential Depression: Level Delocalization and Line Shifts . . . 634
A.4.1 The Analytical b-potential Method . . . 635
A.4.2 Simple Analytical Formulas for Line Shifts . . . 637

A.4.3 Quantum Number Dependent Line Shift and Level Delocalization: High Precision 4th-order Analytical Formulas . . . 638
A.5 Atomic Units and Constants . . . 642
References . . . 643
