|   |              |
|---|--------------|
| <b>Preface</b>  | <b>xviii</b> |
| <b>Acknowledgments</b>  | <b>xix</b>   |
| <b>Author biography</b>   | <b>xx</b>    |
| <b>1 Introduction</b>   | <b>1-1</b>   |
| References  | 1-4          |
| <b>Part I Plasma basics</b>   |              |
| <b>2 Basic concepts of the motion of charged particles</b>              | <b>2-1</b>   |
| 2.1 Single particle orbits  | 2-1          |
| 2.1.1 $B \neq 0$ and $E = 0$  | 2-2          |
| 2.1.2 $E \parallel B$   | 2-3          |
| 2.1.3 $E \perp B$   | 2-3          |
| 2.1.4 Curvature drifts  | 2-4          |
| 2.1.5 Polarization drifts, $dE/dt \neq 0$                               | 2-5          |
| 2.1.6 Finite Larmor radius corrections                                  | 2-7          |
| 2.1.7 Particle drifts when $\nabla B \perp B$                           | 2-9          |
| 2.1.8 Particle motion when $\nabla B \parallel B$                       | 2-14         |
| 2.2 Adiabatic invariants  | 2-16         |
| 2.3 Plasma instabilities explained by single particle motions           | 2-18         |
| 2.3.1 Gravitational or Rayleigh–Taylor instability                      | 2-19         |
| 2.3.2 Polarization by magnetic field gradient flows                     | 2-20         |
| 2.3.3 Temperature gradient instability in inhomogeneous magnetic fields | 2-21         |
| References  | 2-22         |
| <b>3 Collisions in magnetized plasmas</b>                               | <b>3-1</b>   |
| 3.1 Basic physics   | 3-1          |
| 3.1.1 Particle collisions in magnetic fields                            | 3-2          |
| 3.1.2 Collisions in electric and magnetic fields with $E \perp B$       | 3-3          |
| 3.1.3 Collisions with neutrals  | 3-8          |
| 3.2 Auroral arcs  | 3-9          |
| 3.2.1 A simple model for an auroral arc                                 | 3-12         |

|       |  |      |
|-------|--|------|
| 3.3   | Quasi-neutrality                       | 3-15 |
| 3.4   | Plasma diamagnetism                    | 3-16 |
| 3.5   | Diffusion in fully ionized plasmas     | 3-18 |
| 3.5.1 | Diffusion as a random walk             | 3-21 |
| 3.6   | Diffusion in partially ionized plasmas | 3-22 |
| 3.6.1 | Short-circuited electric fields        | 3-23 |
| 3.6.2 | Self-consistent electric fields        | 3-24 |
| 3.6.3 | Unmagnetized plasmas                   | 3-26 |
|       | References                             | 3-27 |

## Part II Electrostatic fluid models

|          |  |            |
|----------|--|------------|
| <b>4</b> | <b>The basic model for drift waves</b>                   | <b>4-1</b> |
| 4.1      | Physical picture   | 4-6        |
| 4.2      | Instability of small amplitude drift waves               | 4-7        |
| 4.3      | Spatially varying magnetic fields                        | 4-8        |
|          | References   | 4-9        |
| <b>5</b> | <b>Simplified linear wave analysis</b>                   | <b>5-1</b> |
| 5.1      | Linear dispersion relation                               | 5-2        |
| 5.2      | Physical picture   | 5-5        |
| 5.2.1    | The electron velocity                                    | 5-6        |
| 5.2.2    | Divergence-free currents                                 | 5-7        |
| 5.3      | Waves in rotating systems: Rossby waves                  | 5-8        |
| 5.3.1    | The $\beta$ -plane approximation                         | 5-9        |
| 5.3.2    | Alternative model for the Rossby waves                   | 5-10       |
|          | References   | 5-12       |
| <b>6</b> | <b>Resistive drift waves with cold ions</b>              | <b>6-1</b> |
| 6.1      | Instability of small amplitude electrostatic drift waves | 6-1        |
| 6.2      | Basic equations  | 6-2        |
| 6.3      | Equilibrium  | 6-5        |
| 6.4      | Perturbations  | 6-6        |
| 6.4.1    | Electron dynamics  | 6-6        |
| 6.4.2    | Ion dynamics   | 6-8        |
| 6.5      | Dispersion relation                                      | 6-10       |
| 6.6      | Amplitude and phase relations                            | 6-12       |

|           |   |             |
|-----------|---|-------------|
| 6.7       | Physical picture  | 6-13        |
| 6.7.1     | Model consistency   | 6-15        |
|           | References  | 6-17        |
| <b>7</b>  | <b>Resistive drift waves with warm ions</b>                               | <b>7-1</b>  |
| 7.1       | Basic equations   | 7-1         |
| 7.2       | Equilibrium   | 7-3         |
| 7.3       | Perturbation  | 7-4         |
| 7.4       | Dispersion relation   | 7-7         |
| 7.4.1     | Pure drift wave   | 7-8         |
| 7.4.2     | Resistive-g mode  | 7-8         |
| 7.4.3     | Finite Larmor radius stabilization of flute modes                         | 7-14        |
|           | References  | 7-15        |
| <b>8</b>  | <b>Electrostatic drift waves with viscosity due to ion-ion collisions</b> | <b>8-1</b>  |
| 8.1       | Dispersion relation   | 8-2         |
| 8.1.1     | Long- $\lambda_{\parallel}$ limit   | 8-3         |
| 8.1.2     | Amplitude and phase relations   | 8-5         |
| 8.1.3     | Short- $\lambda_{\parallel}$ limit  | 8-6         |
| 8.1.4     | An apparent paradox   | 8-7         |
|           | References  | 8-7         |
| <b>9</b>  | <b>Experimental results</b>   | <b>9-1</b>  |
| 9.1       | The Q-machine   | 9-1         |
| 9.2       | Langmuir probes   | 9-7         |
| 9.2.1     | Plane probes  | 9-7         |
| 9.2.2     | Time varying conditions   | 9-10        |
| 9.2.3     | Emissive probes   | 9-14        |
| 9.3       | Experimental observations of drift waves                                  | 9-15        |
|           | References  | 9-18        |
| <b>10</b> | <b>Velocity shear driven instabilities</b>                                | <b>10-1</b> |
| 10.1      | Shear in ion velocities with $u_i \perp B$                                | 10-1        |
| 10.1.1    | Velocity shear instabilities without electron shielding                   | 10-2        |
| 10.1.2    | Velocity shear instabilities with electron shielding                      | 10-6        |
| 10.2      | Shear in ion velocities with $u_i \parallel B$                            | 10-7        |
|           | References  | 10-11       |

|   |             |
|---|-------------|
| <b>11 Ionospheric conditions</b>  | <b>11-1</b> |
| 11.1 Collisions with neutrals   | 11-1        |
| 11.2 Basic equations  | 11-2        |
| 11.3 Equilibrium  | 11-4        |
| 11.4 Perturbations  | 11-5        |
| 11.4.1 Wave propagation perpendicular to both $\nabla n_0$ and $\mathbf{B}$ | 11-6        |
| 11.4.2 Propagation in arbitrary directions                                  | 11-9        |
| 11.5 Gradient instability   | 11-11       |
| 11.5.1 Model equations  | 11-13       |
| 11.6 Sound waves for stable conditions                                      | 11-14       |
| References  | 11-16       |
| <br>  |             |
| <b>12 Inhomogeneous plasma temperatures</b>                                 | <b>12-1</b> |
| 12.1 Gradients in electron temperature                                      | 12-1        |
| 12.2 The low frequency case, $\omega < \Omega_{ci}$                         | 12-2        |
| 12.2.1 Monotonic electron temperature variation                             | 12-5        |
| 12.2.2 Compact electron temperature variations                              | 12-6        |
| 12.3 The high frequency case, $\omega > \Omega_{ci}$                        | 12-7        |
| 12.4 Generalizations for $T_i \neq 0$                                       | 12-8        |
| 12.5 Linear drift waves with inhomogeneous electron temperatures            | 12-9        |
| 12.6 Ion temperature gradient modes   | 12-11       |
| References  | 12-14       |
| <br>  |             |
| <b>13 Waves in a gravitational plasma ionosphere</b>                        | <b>13-1</b> |
| 13.1 Stable and unstable stratifications                                    | 13-1        |
| 13.2 Wave propagation   | 13-4        |
| References  | 13-9        |
| <br>  |             |
| <b>Part III Linear kinetic models</b>                                       |             |
| <br>  |             |
| <b>14 Kinetic models for electrostatic drift waves</b>                      | <b>14-1</b> |
| 14.1 Drift kinetic equation   | 14-1        |
| 14.2 Dispersion relations   | 14-3        |
| 14.2.1 Simple model with $T_i = 0$  | 14-3        |
| 14.2.2 Finite ion inertia   | 14-4        |
| 14.2.3 Warm ions with $(k_y r_L)^2 \ll 1$                                   | 14-5        |

|   |      |
|---|------|
| 14.2.4 Kinetic ion model for $(k_y r_L)^2 \leq 1$ | 14-6 |
| 14.2.5 High frequencies, $\omega > \Omega_{ci}$   | 14-8 |
| 14.2.6 Ion cyclotron drift instability            | 14-9 |
| References  | 14-9 |

#### Part IV Linear drift Alfvén waves

|                                 |             |
|---------------------------------|-------------|
| <b>15 Electromagnetic modes</b> | <b>15-1</b> |
| 15.1 Simplified linear theory   | 15-5        |
| References                      | 15-10       |

#### Part V Weakly nonlinear waves

|  |             |
|--|-------------|
| <b>16 Classifications of turbulence conditions</b>                   | <b>16-1</b> |
| References   | 16-6        |
| <br>   |             |
| <b>17 Weakly nonlinear waves in homogeneously magnetized plasmas</b> | <b>17-1</b> |
| 17.1 Flute modes   | 17-1        |
| 17.1.1 Discrete vortex modes   | 17-2        |
| 17.1.2 Electron shielding  | 17-5        |
| 17.1.3 Models with many vortices                                     | 17-7        |
| 17.1.4 Hamiltonian property of vortex systems                        | 17-9        |
| 17.1.5 Collapse of unshielded vortices                               | 17-12       |
| 17.2 Steady state solutions with distributed vorticity               | 17-18       |
| 17.2.1 Rotating modons   | 17-20       |
| 17.2.2 Modons versus solitons  | 17-20       |
| References   | 17-22       |
| <br>   |             |
| <b>18 Weakly nonlinear electrostatic drift waves</b>                 | <b>18-1</b> |
| 18.1 The Hasegawa–Mima equation                                      | 18-1        |
| 18.1.1 Linearized Hasegawa–Mima equation                             | 18-5        |
| 18.1.2 Conservation laws   | 18-5        |
| 18.1.3 Coherent three wave interactions                              | 18-7        |
| 18.1.4 Stationary solutions  | 18-8        |
| 18.1.5 Drift waves with electron temperature gradients               | 18-12       |

|        |   |       |
|--------|---|-------|
| 18.2   | The Hasegawa–Wakatani equations                       | 18-13 |
| 18.2.1 | Electron dynamics                                     | 18-13 |
| 18.2.2 | Ion dynamics  | 18-13 |
| 18.2.3 | Hasegawa–Wakatani equations                           | 18-14 |
| 18.2.4 | Linearized Hasegawa–Wakatani equations                | 18-15 |
| 18.2.5 | Conservation laws for the Hasegawa–Wakatani equations | 18-16 |
| 18.2.6 | Comments on the Hasegawa–Wakatani equations           | 18-19 |
|        | References  | 18-21 |

## Part VI Randomly varying fields and turbulence

### 19 Elements of statistical analysis 19-1

|        |                                      |       |
|--------|--------------------------------------|-------|
| 19.1   | One variable probabilities           | 19-3  |
| 19.1.1 | Generating functions                 | 19-3  |
| 19.1.2 | Characteristic functions             | 19-4  |
| 19.1.3 | Change of variable                   | 19-5  |
| 19.2   | Multi-variable probabilities         | 19-7  |
| 19.2.1 | Correlation                          | 19-8  |
| 19.2.2 | Stochastic processes                 | 19-9  |
| 19.2.3 | Correlation functions                | 19-13 |
| 19.2.4 | Conditional averages                 | 19-14 |
| 19.2.5 | Time-stationary stochastic processes | 19-17 |
| 19.2.6 | Spatial variables                    | 19-27 |
| 19.2.7 | The Wiener–Khinchine theorem         | 19-30 |
| 19.2.8 | Wavenumber spectra                   | 19-35 |
| 19.2.9 | Reduced wavenumber spectra           | 19-37 |
| 19.3   | Intermittency                        | 19-39 |
| 19.3.1 | Spatial intermittency                | 19-40 |
| 19.3.2 | Temporal intermittency               | 19-41 |
| 19.3.3 | The Gaussian limit                   | 19-44 |
|        | References                           | 19-45 |

### 20 A reference model 20-1

|        |                                 |      |
|--------|---------------------------------|------|
| 20.1   | Campbell's theorem              | 20-2 |
| 20.1.1 | Proof of Campbell's theorem     | 20-3 |
| 20.1.2 | Extension of Campbell's theorem | 20-5 |

|        |   |       |
|--------|---|-------|
| 20.2   | Probability densities                                     | 20-9  |
| 20.2.1 | Extended model  | 20-12 |
| 20.2.2 | Limit of low pulse densities                              | 20-12 |
| 20.2.3 | Transition to Gaussian distributions                      | 20-13 |
| 20.3   | Correlation functions                                     | 20-16 |
| 20.3.1 | Cross-correlation functions                               | 20-19 |
| 20.4   | Spectral representation                                   | 20-20 |
| 20.5   | Statistics of integrals                                   | 20-24 |
