<i>Preface</i>	<i>vii</i>
<i>Abbreviations and acronyms</i>	<i>ix</i>
1. Introduction to space weather	1
1.0 Introduction	1
1.1 Sunspots and solar wind	1
1.2 Geomagnetic field	12
1.3 Atmosphere	19
2. Disturbed space weather	31
2.1 Solar flares	31
2.2 Coronal mass ejections	35
2.3 Solar energetic particles	39
2.4 Geomagnetic disturbances (GMD)	45
2.5 Radiation belts	56
3. Technological vulnerability and statistics	65
3.1 Effects of solar flares	65
3.2 Effects of geomagnetic disturbances (GMD)	67
3.3 Effects of energetic particles	76
3.4 Statistics of extreme events	80
3.5 Outstanding space weather events	87
3.5.1 September 1–2, 1859: The Carrington event	87
3.5.2 May 14, 1921: The New York Railroad event	88
3.5.3 February 23, 1956: The greatest GLE event	88
3.5.4 February 11, 1958: The Tokyo aurora event	88
3.5.5 August 4, 1972: The high-speed and worst SEP event	89
3.5.6 March 13–14, 1989: The Hydro-Quebec blackout event	89
3.5.7 September–October, 1989: The MIR event	89
3.5.8 March 24, 1991: The super SC event	90
3.5.9 July 15, 2000: The Bastille Day event	90
3.5.10 October–November, 2003: The Halloween event	90
3.5.11 January 20, 2005: The second largest GLE event	91
3.5.12 July 23, 2012: The STEREO event	92
3.5.13 September 10, 2017: The Mars event	92

4. Forecasting space hazards	93
4.1 Forecasting solar flares	93
4.2 Arrival of coronal mass ejections	96
4.3 Forecasting substorms	99
4.4 Forecasting magnetic storms	102
4.5 Forecasting radiation belts	106
4.6 Forecasting ground level enhancements	111
4.7 Metrics for evaluating different forecast models	113
5. Toward the Moon and Mars	115
5.1 Predicting galactic cosmic rays (GCR)	115
5.2 Predicting solar energetic particles (SEP)	120
5.3 The Moon	125
5.4 Mars	131
