Preface to the Third Edition	xiii
Preface to the Revised Edition	xvii
Preface to the First Edition	xix
1 Introduction	1
1.1 Definition of a Plasma	2
1.1.1 Debye Shielding	2
1.1.2 The Plasma Parameter	4
1.1.3 The Plasma Frequency	4
1.2 The Geophysical Plasmas	5
1.2.1 The Solar Wind	6
1.2.2 The Magnetosphere	7
1.2.3 The Ionosphere	9
1.3 Magnetospheric Currents	10
1.4 Theoretical Approaches	11
References	13
Problems	13
2 Single Particle Motion	15
2.1 Field Equations	15
2.2 Gyration	16
2.3 Electric Drifts	18
2.3.1 $E \times B$ - Drift	18
2.3.2 Polarization Drift	20
2.3.3 Electric Drift Corrections	21
2.4 Magnetic Drifts	22
2.4.1 Gradient Drift	22
2.4.2 General Force Drift	24
2.4.3 Curvature Drift	25
2.5 Adiabatic Invariants	26
2.5.1 Magnetic Moment	26
2.5.2 Magnetic Mirror	29
2.5.3 Adiabatic Heating	30
2.5.4 Longitudinal Invariant	31
2.5.5 Energy Anisotropy	32
2.5.6 Drift Invariant	33
2.5.7 Violation of Invariance	33
2.5.8 Summary of Guiding Center Drifts	34
2.6 Concluding Remarks	34
References	35
Problems	35

3 Trapped Particles	37
3.1 Dipole Field	37
3.2 Bounce Motion	40
3.2.1 Equatorial Pitch Angle	41
3.2.2 Bounce Period	42
3.2.3 Loss Cone	43
3.3 Drift Motion	44
3.3.1 Magnetic Drift Velocity	45
3.3.2 Electric Drift	46
3.4 Sources and Sinks	47
3.4.1 Adiabatic Heating	48
3.4.2 Loss Processes	49
3.5 Radiation Belts	50
3.6 Ring Current	51
3.6.1 Magnetic Disturbance	52
3.6.2 Magnetic Storms	54
3.7 Concluding Remarks	56
References	56
Problems	57
4 Collisions and Conductivity	58
4.1 Collisions	59
4.1.1 Partially Ionized Plasmas	59
4.1.2 Fully Ionized Plasmas	60
4.2 Plasma Conductivity	64
4.2.1 Unmagnetized Plasma	64
4.2.2 Magnetized Plasma	65
4.3 Ionosphere Formation: The Chapman Layer	69
4.3.1 Solar Ultraviolet Ionization	69
4.3.2 Ionization by Energetic Particles	72
4.3.3 Recombination and Attachment	75
4.3.4 Ionospheric Layers	75
4.4 Ionospheric Conductivity	77
4.4.1 Conductivity Tensor	77
4.4.2 Conductivity Profile	78
4.5 Ionospheric Currents	80
4.5.1 Sq Current	81
4.5.2 Equatorial Electrojet	82
4.6 Auroral Emissions	83
4.7 Concluding Remarks	85
References	86
Problems	86
5 Convection and Substorms	88
5.1 Diffusion and Frozen Flux	88
5.1.1 Magnetic Diffusion	89
5.1.2 Hydromagnetic Theorem	91
5.1.3 Magnetic Reynolds Number	93

5.1.4 Magnetic Merging	94
5.2 The Convection Electric Field	96
5.2.1 Merging and Reconnection	96
5.2.2 Convection Electric Field	98
5.2.3 Shielding	99
5.3 Corotation and Plasmasphere	100
5.3.1 The Corotation Electric Field	101
5.3.2 The Plasmasphere	101
5.4 High-Latitude Electrodynamics	104
5.4.1 Ionospheric Convection	104
5.4.2 Height-Integrated Ohm's Law	105
5.4.3 Polarization Electric Fields	106
5.4.4 Joule Heating	107
5.5 Auroral Electrojets	107
5.5.1 Conductances and Electric Fields	107
5.5.2 Ionospheric and Field-Aligned Currents	109
5.5.3 Joule Heating and AE Index	109
5.6 Magnetospheric Substorms	110
5.6.1 Substorm Growth	111
5.6.2 Substorm Onset and Expansion	112
5.6.3 Substorm Recovery	113
5.7 Substorm Currents	115
5.7.1 Substorm Electrojet	116
5.7.2 Substorm Current Wedge	117
5.8 Concluding Remarks	118
References	120
Problems	120
6 Elements of Kinetic Theory	123
6.1 Exact Phase Space Density	124
6.1.1 Exact Particle Density	124
6.1.2 Equation of Motion	125
6.1.3 Klimontovich-Dupree Equation	127
6.2 Average Distribution Function	128
6.2.1 Kinetic Equation	128
6.2.2 Boltzmann Equation	129
6.2.3 Vlasov Equation	131
6.2.4 Approximations to the Vlasov Equation	132
6.3 Velocity Distributions	136
6.3.1 Maxwellian Distributions	136
6.3.2 Anisotropic Distributions	138
6.3.3 Jüttner Distribution	139
6.3.4 Loss Cone Distributions	141
6.3.5 Energy Distributions	142
6.3.6 Kappa and Power Law Distributions	143
6.4 Measured Distribution Functions	145
6.4.1 Differential Particle Flux	145
6.4.2 Particle Fluxes in Near-Earth Space	146

6.5	Macroscopic Variables	149
6.5.1	Velocity Moments	149
6.5.2	Concept of Temperature	150
6.6	Concluding Remarks	151
	References	154
	Problems	154
7	Plasma Magnetohydrodynamics	156
7.1	Multi-Fluid Theory	157
7.1.1	Continuity Equation	157
7.1.2	Equation of Motion	158
7.1.3	Energy Equation	160
7.2	Equation of State	160
7.2.1	Isotropic Pressure	161
7.2.2	Anisotropic Pressure	162
7.2.3	Double-Adiabatic Invariants	163
7.3	Single-Fluid Theory	165
7.3.1	Continuity Equation	166
7.3.2	Equation of Motion	167
7.3.3	Generalized Ohm's Law	168
7.3.4	Energy Conservation Equation	170
7.3.5	Entropy Equation	171
7.3.6	Magnetic Tension and Plasma Beta	172
7.3.7	Equation of State	173
7.4	Stationarity and Equilibria	173
7.4.1	Boltzmann's Law	174
7.4.2	Diamagnetic Drift	174
7.4.3	Neutral Sheet Current	177
7.4.4	Field-Aligned Currents	179
7.4.5	Polarization Drifts	180
7.4.6	Force-Free Fields	180
7.5	Concluding Remarks	183
7.5.1	Validity of Magnetohydrodynamics in Plasmas	183
7.5.2	Summary of Magnetohydrodynamic Equations	185
	References	186
	Problems	188
8	Flows and Discontinuities	190
8.1	Solar Wind	190
8.1.1	Solar Coronal Outflow	191
8.1.2	Properties of the Solar Wind	193
8.1.3	Interplanetary Magnetic Field	194
8.1.4	Interaction with Obstacles	196
8.2	Fluid Boundaries	197
8.2.1	General Jump Conditions	198
8.2.2	Rankine-Hugoniot Conditions	200
8.3	The MHD Discontinuities	203
8.3.1	Contact and Tangential Discontinuities	203

8.3.2	Rotational Discontinuities	205
8.3.3	Effect of Pressure Anisotropy	207
8.3.4	Entropy Changes	207
8.4	Shocks	208
8.4.1	Intermediate Shocks	208
8.4.2	True Shocks	210
8.4.3	Coplanarity	211
8.4.4	Jump Conditions	211
8.4.5	Fast and Slow Shocks	212
8.4.6	Shock Mach Numbers	214
8.5	Earth's Bow Shock	216
8.5.1	Parallel and Perpendicular Shocks	217
8.5.2	Shock Currents	219
8.6	Earth's Magnetopause	222
8.6.1	The Shape of the Magnetopause	222
8.6.2	The Magnetopause Current System	227
8.6.3	Magnetopause Reconstruction	227
8.6.4	Magnetosheath Flow	229
8.6.5	Reconnection at the Magnetopause	232
8.7	Concluding Remarks	236
	References	238
	Problems	238
9	Waves in Plasma Fluids	240
9.1	Waves in Unmagnetized Fluids	241
9.1.1	Langmuir Oscillations	241
9.1.2	Langmuir Waves	243
9.1.3	Ion-Acoustic Waves	245
9.1.4	Debye Length	249
9.1.5	Ordinary Electromagnetic Waves	251
9.2	General Dispersion Relation	253
9.2.1	General Wave Equation	253
9.2.2	General Wave Dispersion Relation	255
9.2.3	Isotropic Plasma	256
9.2.4	Dielectric Response Function	257
9.3	Plasma Wave Energy	258
9.3.1	Langmuir Plasmons	259
9.3.2	Average Energy	259
9.4	Magnetohydrodynamic Waves	262
9.4.1	Magnetohydrodynamic Dispersion Relation	262
9.4.2	Shear Alfvén Wave	265
9.4.3	Magnetosonic Waves	265
9.5	Cold Electron Plasma Waves	268
9.5.1	The Cold Electron Plasma Dispersion Relation	268
9.5.2	High-Frequency Electromagnetic Waves	270
9.5.3	Parallel Electromagnetic Wave Propagation	271
9.5.4	Perpendicular Electromagnetic Wave Propagation	275
9.6	Two-Fluid Plasma Waves	276

9.6.1	Effect of Ion Dynamics	277
9.6.2	Parallel Wave Propagation	277
9.6.3	Perpendicular Wave Propagation	279
9.6.4	Oblique Propagation	280
9.7	Geomagnetic Pulsations	283
9.7.1	Field Line Resonance	284
9.7.2	Sources of Pc Pulsations	285
9.7.3	Pi2 Pulsations	286
9.8	Concluding Remarks	288
	References	289
	Problems	289
10	Wave Kinetic Theory	292
10.1	Landau-Laplace Procedure	292
10.1.1	Langmuir Waves	294
10.1.2	Landau-Laplace Procedure	295
10.2	Landau Damping	298
10.2.1	Thermal Plasma	298
10.2.2	Damping Rate	300
10.2.3	Physics of Landau-Damping	301
10.3	Unmagnetized Plasma Waves	304
10.3.1	Ion-Acoustic Waves	305
10.3.2	Electron-Acoustic Waves	307
10.3.3	Electromagnetic Waves	310
10.3.4	Plasma Dispersion Function	312
10.4	Magnetized Dispersion Relation	313
10.4.1	Particle Resonance	316
10.5	Electrostatic Plasma Waves	316
10.5.1	Magnetized Langmuir and Ion-Acoustic Waves	317
10.5.2	Electron Bernstein Waves	319
10.5.3	Upper-Hybrid Waves	322
10.5.4	Ion Bernstein Waves	323
10.5.5	Lower-Hybrid Waves	326
10.6	Electromagnetic Plasma Waves	327
10.6.1	Weak Damping	328
10.6.2	Electromagnetic Modes	329
10.6.3	Whistlers	329
10.6.4	Electromagnetic Ion-Cyclotron Waves	331
10.6.5	Kinetic Alfvén Waves	332
10.6.6	Properties of Kinetic Alfvén Waves	336
10.7	Concluding Remarks	339
	References	341
	Problems	342
11	Plasma Instability	343
11.1	Wave Growth Rate	344
11.1.1	Weak Instability	345
11.1.2	Non-oscillatory Instability	345

11.2	High-frequency Kinetic Instabilities	346
11.2.1	Resonant Excitation of Langmuir Waves	347
11.2.2	Resonant Excitation of Ion-acoustic Waves	349
11.2.3	Excitation of Weibel Instability	351
11.3	Fluid Instabilities	352
11.3.1	Electrostatic Two-stream (Buneman) Instability	352
11.3.2	Electromagnetic Beam (Filamentation) Instability	353
11.3.3	Firehose Instability	354
11.3.4	Mirror Instability	355
11.3.5	Kelvin-Helmholtz Instability	357
11.4	Thermal Fluctuations	359
11.4.1	General Expressions for the Fields	360
11.4.2	Fluctuations in Isotropic Plasma	361
11.4.3	Summary	362
	References	363
	Problems	364
12	Collisionless Reconnection	365
12.1	Reconnection Models	366
12.1.1	Sweet-Parker-Petschek-Sonnerup	366
12.1.2	The Ohm's Law Terms	369
12.2	Small-scale Physics of Reconnection	376
12.2.1	Absence of Guide Field	377
12.2.2	Guide Field Reconnection	382
12.2.3	Driven Reconnection	386
12.3	Magnetopause Reconnection	388
12.3.1	Observations	389
12.3.2	Comparison with Simulations	391
12.4	The Reconnecting Magnetotail Current Sheet	394
12.4.1	Observations	395
12.4.2	Magnetotail-relevant Simulations	397
12.5	Summary	399
	References	401
13	Collisionless Shocks	403
13.1	Subcritical Shocks	404
13.1.1	Mechanism of Subcritical Shocks	406
13.1.2	Causes of Anomalous Dissipation	407
13.2	Quasi-perpendicular Shocks	410
13.2.1	Dynamics of Particle Reflection	411
13.2.2	Shock Foot and Reformation	413
13.2.3	Particle Dynamics	418
13.2.4	Waves	422
13.3	Quasi-parallel Shocks	425
13.3.1	The Foreshock	425
13.3.2	Quasi-parallel Shock Reformation	429
13.4	Summary	435
	References	437

14 Final Remarks	439
Appendix	
A — Additions to the Third Edition	441
A.1 Olbert's Kappa Distribution	441
A.2 Mirror Modes	446
A.3 Turbulence	451
A.4 Space Climatology and Space Weather	458
References	466
B — Basic Relations	472
B.1 Useful Constants and Numbers (SI units)	472
B.2 Energy Units	473
B.3 Useful Formulas	473
B.4 Vectors and Tensors	474
B.5 Electrodynamics in a Nutshell	477
B.6 Plasma Entropy	480
B.7 Aspects of Analytic Theory	481
C — Extensions	486
C.1 Coulomb Logarithm	486
C.2 Transport Coefficients	488
C.3 Geomagnetic Indices	490
C.4 Liouville Approach	493
C.5 Clemmow-Mullaly-Allis Diagram	495
C.6 Magnetized Dielectric Tensor	496
Index	501
