

# Contents

<i>Preface</i>	vii
1. Introduction	1
1.1 Accurate Numbers . . . . .	1
1.2 Fundamental Constants . . . . .	4
1.3 Overview of Chapter Contents . . . . .	7
1.4 Miscellaneous Remarks . . . . .	14
1.5 Further Thoughts . . . . .	14
2. From Unit Systems for the Microworld to Field Quantization	17
2.1 Overview . . . . .	17
2.2 Atoms and Field Quantization . . . . .	17
2.2.1 Matter Waves and Hamilton–Jacobi Formalism . . . . .	17
2.2.2 Field Quantization as Second Quantization . . . . .	19
2.3 Unit Systems Scaled to the Microworld . . . . .	21
2.3.1 Unit Systems and Observation Scales . . . . .	21
2.3.2 Natural Unit System . . . . .	23
2.3.3 Atomic Unit System . . . . .	27
2.4 Field Quantization for the Electromagnetic Field . . . . .	29
2.4.1 Quantization of the Free Electromagnetic Field . . . . .	29
2.4.2 Field Operators and Quantized Hamiltonian . . . . .	36
2.4.3 Discretized Formulation of the Field Operators . . . . .	40
2.5 Interaction Picture and Phase Conventions . . . . .	42
2.5.1 Field Operators in the Schrödinger and Interaction Pictures	42
2.5.2 Integration Measure and Phase Conventions . . . . .	45
2.6 Further Thoughts . . . . .	46
3. Time-Ordered Perturbations	49
3.1 Overview . . . . .	49
3.2 Time-Ordered Perturbations and Fermi’s Golden Rule . . . . .	49

3.2.1	Derivation of Fermi's Golden Rule . . . . .	49	4.7.1	Electric Dipole Decay and Imaginary Part of Self-Energy . . . . .	140
3.2.2	Fermi's Golden Rule and Nuclear Beta Decay . . . . .	53	4.7.2	Magnetic Interactions and Decay Rates . . . . .	142
3.2.3	Fermi's Golden Rule and Atomic Decay Rates . . . . .	55	4.7.3	Higher-Order Terms . . . . .	144
3.3	Dynamic Stark Effect . . . . .	57	4.8	Further Thoughts . . . . .	146
3.3.1	Way 1: Time-Dependent Perturbation Theory . . . . .	57	5.	Interatomic and Atom-Surface Interactions . . . . .	149
3.3.2	Way 2: Quantized Fields . . . . .	62	5.1	Overview . . . . .	149
3.3.3	Way 3: Gell-Mann–Low–Sucher Theorem . . . . .	64	5.2	Wigner–Brioullin Perturbation Theory . . . . .	149
3.4	Static Stark Effect and Level Width . . . . .	65	5.2.1	Spectral Representation of the Green Function . . . . .	149
3.4.1	Stark Shift and Large-Order Perturbation Theory . . . . .	65	5.2.2	First-Order and Second-Order Perturbation Theory . . . . .	150
3.4.2	Quantum Electrodynamics and Large-Order Perturbations . . . . .	70	5.2.3	Higher-Order Perturbation Theory (Wigner–Brioullin) . . . . .	152
3.5	Further Thoughts . . . . .	73	5.3	Application to the Finite-Size Effect . . . . .	155
4.	Bound-Electron Self-Energy and Bethe Logarithm . . . . .	75	5.3.1	Master Integrals . . . . .	155
4.1	Overview . . . . .	75	5.3.2	First-Order and Second-Order Finite-Size Effect . . . . .	157
4.2	Schrödinger–Coulomb Hamiltonian and Wave Functions . . . . .	76	5.4	Interatomic Interactions . . . . .	159
4.2.1	Spectrum of the Hydrogen Atom and $SO(4)$ Symmetry . . . . .	76	5.4.1	Origin of van der Waals and Casimir–Polder Interactions . . . . .	159
4.2.2	Differential Equations and the Hydrogen Atom . . . . .	79	5.4.2	Calculation of Interatomic Interactions . . . . .	160
4.2.3	Schrödinger–Coulomb Bound States . . . . .	83	5.4.3	Limit of Large Separation of the Two Atoms . . . . .	166
4.2.4	Schrödinger–Coulomb Virial Theorem . . . . .	85	5.4.4	Nonretarded (van der Waals) Interatomic Interaction . . . . .	169
4.2.5	Schrödinger–Coulomb Continuum States . . . . .	86	5.4.5	Interpolating Formula . . . . .	171
4.2.6	Continuum States for a Repulsive Potential . . . . .	89	5.5	Atom-Surface Interactions . . . . .	176
4.3	Schrödinger–Coulomb Green Function in Coordinate Space . . . . .	90	5.5.1	Perfectly Conducting Wall, Long Range . . . . .	176
4.3.1	Green Function and Radial Equation . . . . .	90	5.5.2	Dipole Interaction . . . . .	177
4.3.2	Solution using Whittaker Functions . . . . .	92	5.5.3	Multipole Interactions . . . . .	183
4.3.3	Solution using Laguerre Polynomials . . . . .	94	5.5.4	Interactions with a Dielectric Surface . . . . .	187
4.3.4	Green Function and Dynamic Polarizability . . . . .	96	5.6	Further Thoughts . . . . .	188
4.4	Schrödinger–Coulomb Green Function in Momentum Space . . . . .	102	6.	Racah–Wigner Algebra . . . . .	191
4.4.1	Free Green Function in Momentum Space . . . . .	102	6.1	Overview . . . . .	191
4.4.2	Toward the $SO(4)$ Symmetry . . . . .	104	6.2	Clebsch–Gordan Coefficients . . . . .	191
4.4.3	Four-Dimensional Spherical Harmonics . . . . .	109	6.2.1	Expansions and Clebsch–Gordan Coefficients . . . . .	191
4.4.4	Wave Functions in Momentum Space . . . . .	112	6.2.2	Matrix Elements and Clebsch–Gordan Coefficients . . . . .	196
4.4.5	Integral Representation . . . . .	113	6.3	Coefficients and Rotations . . . . .	198
4.5	Modern Ideas and Bound-State Self-Energy . . . . .	116	6.3.1	Vector Addition or Clebsch–Gordan Coefficients . . . . .	198
4.5.1	Essence of Renormalization . . . . .	116	6.3.2	Wigner $3j$ , $6j$ and $9j$ Symbols . . . . .	200
4.5.2	Overlapping Parameter . . . . .	118	6.3.3	Gaunt Coefficients . . . . .	203
4.6	Bound-State Self-Energy: Low-Energy Part . . . . .	121	6.3.4	Representation of Finite Rotations . . . . .	204
4.6.1	Length Gauge . . . . .	121	6.4	Composed Tensors of Higher Order . . . . .	206
4.6.2	Velocity Gauge . . . . .	126	6.4.1	Construction of the Spin-Angular Function . . . . .	206
4.6.3	Calculation of the Bethe Logarithm . . . . .	129	6.4.2	Construction of the Vector Spherical Harmonic . . . . .	209
4.6.4	Numerical Values of Bethe Logarithms . . . . .	133	6.4.3	Spherical Biharmonic . . . . .	211
4.6.5	Outline of the High-Energy Part . . . . .	136	6.5	Applications of Racah–Wigner Algebra . . . . .	212
4.7	Applications of the Developed Formalism . . . . .	140			

6.5.1	Tensor Decomposition of the Light Shift . . . . .	212	8.4.6	Spin Connection . . . . .	305
6.5.2	Tensorial Decomposition of a Dipole Transition . . . . .	218	8.4.7	Transformation Properties of Rotation Coefficients . . . . .	306
6.6	Rydberg Electron and Hydrogenlike Core . . . . .	219	8.5	Applications of Gravitational Coupling . . . . .	308
6.6.1	Physical Foundation . . . . .	219	8.5.1	Dirac–Schwarzschild Hamiltonian . . . . .	308
6.6.2	Angular Algebra . . . . .	221	8.5.2	Dirac Adjoint for Curved Space-Times . . . . .	310
6.7	Further Thoughts . . . . .	225	8.5.3	Lagrangian and Charge Conjugation . . . . .	311
7.	Free Dirac Equation	227	8.6	Further Thoughts . . . . .	313
7.1	Overview . . . . .	227	9.	Electromagnetic Field and Photon Propagators	321
7.2	Properties of the Free Dirac Equation . . . . .	227	9.1	Overview . . . . .	321
7.2.1	Dirac Equation as the Linearized Klein–Gordon Equation	227	9.2	Time Orderings, Field Commutators and Green Functions . . . . .	323
7.2.2	Spinor Lorentz Transformation . . . . .	231	9.2.1	Miscellaneous Fundamental Relations for Green Functions	323
7.2.3	Discrete Symmetries . . . . .	233	9.2.2	Distributions and Fourier Transforms . . . . .	325
7.2.4	Overview of the Symmetry Properties . . . . .	237	9.3	Photon Propagator in Coulomb Gauge . . . . .	328
7.3	Solutions of the Free Dirac Equation . . . . .	238	9.3.1	Legendre Transformation and Hamiltonian . . . . .	328
7.3.1	Plane-Wave Solutions of the Dirac Equation . . . . .	238	9.3.2	Matching and Photon Propagator . . . . .	331
7.3.2	Dirac Angular Quantum Number . . . . .	241	9.4	Photon Propagator in Lorenz Gauge . . . . .	334
7.3.3	Angular Momenta and Massless Dirac Equation . . . . .	243	9.4.1	Gauge Invariance and Mass of Photon . . . . .	334
7.3.4	Angular Momenta and Free Dirac Equation . . . . .	246	9.4.2	Gauge-Fixing Term and Quantization . . . . .	335
7.4	Quantized Dirac Field and Propagators . . . . .	248	9.4.3	Representations of the Photon Propagator . . . . .	340
7.4.1	Free Dirac Progator in Feynman’s Formulation . . . . .	248	9.5	Photon Propagator in General Gauges . . . . .	342
7.4.2	Feynman Propagator and Green Function . . . . .	253	9.5.1	Construction Principle . . . . .	342
7.4.3	Free Dirac Propagator in the Angular Momentum Basis .	257	9.5.2	Most General Form and Weyl Gauge . . . . .	343
7.5	Further Thoughts . . . . .	261	9.5.3	Gupta–Bleuler Condition . . . . .	344
8.	Dirac Equation for Bound States, Lasers and Gravity	265	9.6	Wick Theorem and Applications . . . . .	346
8.1	Overview . . . . .	265	9.6.1	Time Ordering and Wick Theorem . . . . .	346
8.2	Dirac Equation and Coulomb Field . . . . .	265	9.6.2	Field Commutators and Current Distributions . . . . .	350
8.2.1	Electromagnetic Covariant Derivative . . . . .	265	9.7	Further Thoughts . . . . .	356
8.2.2	Dirac–Coulomb Bound-State Wave Functions . . . . .	266			
8.2.3	Dirac–Coulomb Continuum-State Wave Functions . . . . .	274			
8.2.4	Dirac–Coulomb Virial Theorem . . . . .	279			
8.2.5	Dirac–Coulomb Propagator . . . . .	281			
8.3	Dirac–Volkov Equation for Laser Fields . . . . .	284			
8.3.1	Dirac–Volkov Solutions for Laser Fields . . . . .	284			
8.3.2	Dirac–Volkov Propagator . . . . .	289			
8.4	Dirac Equation with Coupling to Gravitational Fields . . . . .	293			
8.4.1	Metric and Covariant Derivative . . . . .	293			
8.4.2	Tetrad Basis and Affine Connection Matrix . . . . .	297			
8.4.3	Ricci Rotation Coefficients . . . . .	300			
8.4.4	Covariant Derivative of a Spinor . . . . .	301			
8.4.5	Covariant Derivative of the Dirac Matrices . . . . .	304			
10.	Tree-Level and Loop Diagrams, and Renormalization	359			
10.1	Overview . . . . .	359			
10.2	Tree-Level . . . . .	361			
10.2.1	Rutherford Scattering . . . . .	361			
10.2.2	Feynman Rules . . . . .	367			
10.3	Vertex Correction . . . . .	370			
10.3.1	Vertex and Pauli–Villars Regularization . . . . .	370			
10.3.2	Vertex and Form Factors . . . . .	379			
10.3.3	Vertex and Renormalization . . . . .	383			
10.3.4	Detour on Dimensional Regularization . . . . .	390			
10.3.5	Detour on Feynman Parameterization . . . . .	392			
10.3.6	Vertex and Dimensional Regularization . . . . .	394			
10.4	Vacuum Polarization . . . . .	400			

10.4.1	Initial Considerations . . . . .	400	12.2.1	General Paradigm of the Matching . . . . .	462
10.4.2	Vacuum Polarization and Dimensional Regularization . . . . .	402	12.2.2	Scattering Amplitudes and Interatomic Interactions . . . . .	463
10.4.3	Vacuum Polarization and Coulomb Potential . . . . .	406	12.3	From the One-Body to the Two-Body Hamiltonian . . . . .	468
10.4.4	Vacuum Polarization and Asymptotics . . . . .	409	12.3.1	Relevant Hamiltonians . . . . .	468
10.5	Self-Energy Operator . . . . .	411	12.3.2	Matching the Two-Particle Interaction Hamiltonian . . . . .	469
10.5.1	Self-Energy and Pauli–Villars Regularization . . . . .	411	12.3.3	Photon Exchange and Breit Hamiltonian . . . . .	471
10.5.2	Self-Energy and Dimensional Regularization . . . . .	413	12.3.4	Breit Hamiltonian for Unequal Particles . . . . .	475
10.6	Renormalization of QED . . . . .	413	12.4	Applications and Generalizations for Many-Particle Systems . . . . .	477
10.6.1	Bare and Renormalized Lagrangian . . . . .	413	12.4.1	Application to Many-Electron Systems . . . . .	477
10.6.2	Renormalization of Vertex and Self-Energy . . . . .	414	12.4.2	Single-Particle Hamiltonian for Arbitrary Spin . . . . .	479
10.6.3	Renormalization of Vacuum Polarization . . . . .	416	12.4.3	Interaction Hamiltonian for General Spin . . . . .	483
10.6.4	Compilation of Renormalization Constants . . . . .	419	12.5	Application to Two-Body Bound Systems . . . . .	484
10.6.5	Forest Formula . . . . .	420	12.5.1	General Aspects . . . . .	484
10.7	Further Thoughts . . . . .	422	12.5.2	Definition of the Lamb Shift . . . . .	486
11.	Foldy–Wouthuysen Transformation and Lamb Shift	425	12.5.3	Application to Hydrogenlike Ions . . . . .	487
11.1	Overview . . . . .	425	12.6	Compound System in a Homogeneous Magnetic Field . . . . .	492
11.2	Leading Relativistic Corrections . . . . .	426	12.6.1	Power–Zienau Transformation for a Magnetic Field . . . . .	492
11.2.1	Unitary Transformation and Hamiltonian . . . . .	426	12.6.2	Reduced-Mass Corrections to the Zeeman Effect . . . . .	497
11.2.2	Free Dirac Particle . . . . .	427	12.6.3	Nuclear Magnetic Shielding . . . . .	499
11.2.3	Transformation in the General Case . . . . .	429	12.7	Further Thoughts . . . . .	502
11.2.4	Radiatively Corrected Dirac Hamiltonian . . . . .	429	13.	Fully Correlated Basis Sets and Helium	507
11.2.5	General Electromagnetic Coupling . . . . .	432	13.1	Overview . . . . .	507
11.2.6	General Particle Hamiltonians . . . . .	434	13.2	Essential Ingredients for Many-Electron Systems . . . . .	507
11.3	Applications . . . . .	436	13.2.1	Spin Wave Functions . . . . .	507
11.3.1	Coulomb Field Coupling . . . . .	436	13.2.2	Two-Body Problem: Center-of-Mass Coordinates . . . . .	510
11.3.2	Magnetic Field Coupling and Electron Moment . . . . .	439	13.2.3	Three-Body Problem: Mass Polarization . . . . .	511
11.3.3	Magnetic Fields and Electrostatic Potentials . . . . .	440	13.3	Relativistic and Radiative Corrections . . . . .	513
11.3.4	Transition Current . . . . .	442	13.3.1	Relativistic Corrections . . . . .	513
11.3.5	Nonrelativistic Transition Current and Multipoles . . . . .	447	13.3.2	Derivation of the Helium Lamb Shift . . . . .	515
11.4	Dirac Form Factor and Bound-State Radiative Energy Shifts . . . . .	448	13.4	Numerical Calculation of the Helium Spectrum . . . . .	520
11.4.1	Foldy–Wouthuysen Transformation and Form Factors . . . . .	448	13.4.1	Fully Correlated Basis Sets . . . . .	520
11.4.2	High-Energy Part in Photon Mass Regularization . . . . .	449	13.4.2	Matrix Elements and Nonorthogonal Basis . . . . .	523
11.4.3	High-Energy Part in Photon Energy Regularization . . . . .	453	13.4.3	Numerical Results and Technical Issues . . . . .	525
11.4.4	Self-Energy in Dimensional Regularization . . . . .	454	13.5	Further Thoughts . . . . .	529
11.4.5	Vacuum Polarization . . . . .	456	14.	Relativistic Many-Particle Calculations	531
11.5	Foldy–Wouthuysen Transformation and Gravity . . . . .	457	14.1	Overview . . . . .	531
11.6	Further Thoughts . . . . .	458	14.2	Many-Particle Systems and Hartree–Fock Approximation . . . . .	533
12.	Relativistic Interactions for Many-Particle and Compound Systems	461	14.2.1	Nonrelativistic Hartree–Fock Approximation . . . . .	533
12.1	Overview . . . . .	461	14.2.2	Implementation and Practical Aspects . . . . .	536
12.2	Interatomic Interactions in Covariant Formalism . . . . .	462	14.3	Relativistic Hartree–Fock Methods . . . . .	538

14.3.1 Brown–Ravenhall Disease . . . . .	538	16.3.3 Contribution from the Hard Region . . . . .	631
14.3.2 Relativistic Frequency-Dependent Breit Interaction . . . . .	539	16.3.4 Soft Contribution from Two Transverse Photons . . . . .	636
14.3.3 Relativistic Hartree–Fock Approximation . . . . .	542	16.3.5 Soft Contribution from a Single Transverse Photon . . . . .	637
14.3.4 Relativistic Multi-Configurational Approach . . . . .	543	16.3.6 Ultrasoft Contribution from a Single Transverse Photon . .	641
14.3.5 Relativistic Breit Interaction and Spinors . . . . .	545	16.3.7 Sum of the Contributions . . . . .	647
14.3.6 Subtleties of Nuclear Effects, QED and MCDHF . . . . .	547	16.4 Hyperfine Structure of <i>S</i> States (BSEQ Approach) . . . . .	648
14.3.7 Software Packages and Applications . . . . .	548	16.5 Further Thoughts . . . . .	654
14.4 Systems with a Large Number of Electrons . . . . .	551	17. NRQED: An Effective Field Theory for Atomic Physics	657
14.5 Further Thoughts . . . . .	554	17.1 Overview . . . . .	657
15. Beyond Breit Hamiltonian and On-Shell Form Factors	557	17.2 Basics of NRQED . . . . .	659
15.1 Overview . . . . .	557	17.2.1 NRQED Lagrangian and Feynman Rules . . . . .	659
15.2 Furry Picture, Scattering Amplitude and Self-Energy . . . . .	558	17.2.2 Matching Coefficients . . . . .	662
15.2.1 Furry Picture . . . . .	558	17.2.3 Bethe–Salpeter Equation of NRQED . . . . .	671
15.2.2 Matching for the Bound-State Self-Energy . . . . .	559	17.3 Applications of NRQED . . . . .	677
15.3 Binding Correction to the Lamb Shift . . . . .	561	17.3.1 Energy Levels at $\mathcal{O}(Z\alpha)^4$ (NRQED Approach) . . . . .	677
15.3.1 Two-Coulomb-Vertex Scattering Amplitude . . . . .	561	17.3.2 Relativistic Recoil Correction (NRQED Approach) . . . . .	681
15.3.2 Forward Scattering Amplitudes . . . . .	564	17.3.3 Hyperfine Structure of S States (NRQED Approach) . .	688
15.3.3 Dispersion Relation and Subtractions . . . . .	566	17.4 Discussion . . . . .	688
15.3.4 Example Integral . . . . .	568	17.5 Further Thoughts . . . . .	689
15.3.5 Final Integration and $A_{50}$ Coefficient . . . . .	571	18. Fermionic Determinants and Effective Lagrangians	691
15.4 Higher-Order Terms . . . . .	572	18.1 Overview . . . . .	691
15.5 Relativistic Recoil Correction . . . . .	575	18.2 Derivation of the Heisenberg–Euler Effective Lagrangian .	692
15.5.1 Retardation and Salpeter Correction . . . . .	575	18.2.1 Heisenberg–Euler Lagrangian for Electric Fields . . . . .	692
15.5.2 Low-Energy Part and Dipole Approximation . . . . .	577	18.2.2 Heisenberg–Euler Lagrangian for General Fields . . . . .	705
15.5.3 Middle-Energy Part and Araki–Sucher Distribution . .	579	18.3 Application of the Heisenberg–Euler Lagrangian . . . . .	707
15.5.4 Seagull Part . . . . .	584	18.3.1 Modification of the Speed of Light in Background Fields	707
15.5.5 High-Energy Part . . . . .	587	18.3.2 Effective Lagrangian and Wichmann–Kroll Potential . .	711
15.5.6 Final Result . . . . .	590	18.4 Further Thoughts . . . . .	714
15.6 Further Thoughts . . . . .	590	19. Renormalization-Group Equations	715
16. Bethe–Salpeter Equation	593	19.1 Orientation and Motivation . . . . .	715
16.1 Overview . . . . .	593	19.1.1 Renormalization on Different Scales . . . . .	715
16.2 General Ideas . . . . .	594	19.1.2 Renormalization-Group Equations . . . . .	719
16.2.1 Two-Body Bound States and Green Functions . . . . .	594	19.2 Scale Transformations . . . . .	721
16.2.2 Questions of Gauge and Transformations . . . . .	604	19.2.1 From Poor Man’s Scaling to Nontrivial Scaling . . . . .	721
16.2.3 Reference Kernels and Exact Solutions . . . . .	608	19.2.2 Scale Transformation and Schrödinger Hamiltonian . .	722
16.2.4 Bound-State Perturbation Theory . . . . .	614	19.2.3 Scale Transformation of the Dirac Hamiltonian . . . . .	724
16.2.5 Energy Levels at $\mathcal{O}(Z\alpha)^4$ (BSEQ Approach) . . . . .	618	19.3 Renormalization Group Transformations . . . . .	725
16.3 Relativistic Recoil Correction (BSEQ Approach) . . . . .	623	19.3.1 Functional Equations in the Asymptotic Regime . . . . .	725
16.3.1 Exploring Integration Regions . . . . .	623	19.3.2 Renormalization Group of Callan and Symanzik . . . . .	731
16.3.2 Method of Regions . . . . .	627		

19.3.3 Connection of Callan–Symanzik and Gell-Mann–Low . . . . .	734
19.4 RG Equations and Applications . . . . .	736
19.4.1 Effective Action and Renormalization Group . . . . .	736
19.4.2 Brodsky–Lepage–Mackenzie Scale Setting . . . . .	739
19.5 Further Thoughts . . . . .	743
<i>Bibliography</i>	747
