<b>1. Frustrated tunneling ionization: building a bridge between the internal and macroscopic states of an atom</b>	<b>1</b>
Ulli Eichmann and Serguei Patchkovskii	
1. Introduction	2
2. The time dependent view on strong-field excitation: frustrated tunneling ionization (FTI)	7
3. The time and frequency view: unifying the picture of MPI and FTI	24
4. Semi-classical treatment of FTI and related phenomena	32
5. Frustrated double ionization (FDI)	45
6. FTI and acceleration in strong focused laser fields	51
7. Outlook	74
Acknowledgments	75
References	75
<b>2. Direct laser cooling of polyatomic molecules</b>	<b>89</b>
Benjamin L. Augenbraun, Loïc Anderegg, Christian Hallas, Zack D. Lasner, Nathaniel B. Vilas, and John M. Doyle	
1. Introduction	90
2. Molecular structure for laser cooling experiments	106
3. Experimental techniques	137
4. Outlook and challenges	163
5. Conclusion	168
Acknowledgments	169
References	169
<b>3. Attosecond electron dynamics in molecular systems</b>	<b>183</b>
Oliver G. Alexander, Jon P. Marangos, Marco Ruberti, and Morgane Vacher	
1. Introduction	184
2. Theory background	187
3. Theory of attosecond charge dynamics	197
4. Observations of attosecond molecular dynamics	212
5. Case studies	219
6. Quantum control and the concept of charge-directed reactivity	226

7. Future directions of the field	231
8. Conclusion	238
References	239
<b>4. Super- and subradiance in dilute disordered cold atomic samples: observations and interpretations</b>	<b>253</b>
William Guerin	
1. Short introduction on super- and subradiance	255
2. Subradiance in dilute samples in the linear-optics regime	260
3. Superradiance in the linear-optics regime	265
4. Atomic interpretation of super- and subradiance: collective modes	268
5. Optical interpretation of super- and subradiance	269
6. Beyond the dilute and linear-optics limits	283
7. Conclusion	288
Acknowledgments	290
References	290
<b>5. Broadband quantum memory in atomic ensembles</b>	<b>297</b>
Kai Shinbrough, Donny R. Pearson Jr., Bin Fang, Elizabeth A. Goldschmidt, and Virginia O. Lorenz	
1. Introduction	298
2. Protocols and hardware	315
3. Theory	334
4. State of the art	346
5. Conclusion	350
Acknowledgments	351
References	351
<b>6. The path to continuous Bose-Einstein condensation</b>	<b>361</b>
Chun-Chia Chen (陳俊嘉), Shayne Bennetts, and Florian Schreck	
1. Introduction	362
2. Early work	364
3. Continuous Bose-Einstein condensation	381
4. Next steps	404
5. Applications	408
6. In summary	413
Acknowledgments	413
References	414
