Volume 1

Preface *xix*

Part I Fundamental Aspects of LIBS and Laser-Induced Plasma 1

- 1 Nanosecond and Femtosecond Laser-Induced Breakdown Spectroscopy: Fundamentals and Applications 3**
K. M. Muhammed Shameem, Swetapuspa Soumyashree, P. Madhusudhan, Vinitha Nimma, Rituparna Das, Pranav Bhardwaj, Prashant Kumar and Rajesh K. Kushawaha
 - 1.1 Introduction 3
 - 1.2 LIBS: ns-LIBS and fs-LIBS 5
 - 1.3 Plasma-Plume Dynamics 10
 - 1.4 Filamentation 14
 - 1.5 Signal-Enhancing Strategies in LIBS 17
 - 1.6 Applications 20
 - 1.7 Summary 21
 - References 22
- 2 Elementary Processes and Emission Spectra in Laser-Induced Plasma 33**
V. Gardette, Z. Salajkova, M. Dell'Aglia and A. De Giacomo
 - 2.1 Introduction 33
 - 2.2 Laser-Ablation Mechanism 33
 - 2.3 Plasma Characteristics and Elementary Processes 35
 - 2.4 Plasma in Thermodynamic Equilibrium 37
 - 2.5 Plasma Emission Features 39
 - 2.6 Conclusion 41
 - References 41
- 3 Diagnostics of Laser-Induced Plasma 45**
Charles Ghany, Kyung-Min Lee, Herve K. Sanghavi and Vivek K. Singh
 - 3.1 Introduction 45

- 3.2 LIBS Plasmas and Its Characteristics 46
 - 3.2.1 Laser-Induced Plasma 46
 - 3.2.2 Plasma Temperature Measurements 46
 - 3.2.3 Electron Density Measurements 47
 - 3.2.3.1 Nonlinear Stark Broadening 47
 - 3.2.3.2 Linear Stark Broadening 48
 - 3.2.4 Additional Comments on the Characteristics of LIBS Plasmas 48
 - 3.2.4.1 Matrix Effect 48
 - 3.2.4.2 McWhirter Criterion 49
- 3.3 Factors Affecting the LIBS Plasma 49
 - 3.3.1 Laser Characteristics 49
 - 3.3.2 Wavelength and Pulse Duration of Laser 50
 - 3.3.3 Properties of Target Material 50
 - 3.3.4 Time Window of Observation 50
 - 3.3.5 Geometric Setup 50
 - 3.3.6 Ambient Gas 50
- 3.4 Methods of Enhancing LIBS Sensitivity 51
- 3.5 LTE Plasmas and Non-LTE Plasmas 52
- 3.6 Laser-Plasma Expansion in Gas and Liquids: Modeling and Validation 54
- 3.7 Chemistry in Laser Plasmas (Biological, Medical, and Isotopic Applications) 57
- 3.8 Conclusion 58
References 59

- 4 Double and Multiple Pulse LIBS Techniques 65**
Francesco Poggialini, Asia Botto, Beatrice Campanella, Simona Raneri, Vincenzo Palleschi and Stefano Legnaioli
 - 4.1 Introduction 65
 - 4.2 Double-Pulse LIBS: Geometries and Configurations 67
 - 4.2.1 Collinear DP-LIBS 67
 - 4.2.2 Orthogonal DP-LIBS 68
 - 4.2.3 Parallel DP-LIBS 70
 - 4.2.4 Variable Pulse Duration in DP-LIBS 72
 - 4.2.5 Variable Pulse Wavelength in DP-LIBS 73
 - 4.2.6 Multiple Pulse LIBS 75
 - 4.3 Signal Enhancement in DP-LIBS: Principles and Theory 77
 - 4.4 Applications of DP-LIBS 80
 - 4.4.1 DP-LIBS of Archaeological Artifacts 80
 - 4.4.2 DP-LIBS for the Stand-Off Detection of Explosives 81
 - 4.4.3 DP-LIBS for the Analysis of Biological Materials 81
 - 4.4.4 DP- μ -LIBS Mapping 83
 - 4.5 Conclusions 83
References 84

- 5 Calibration-Free Laser-Induced Breakdown Spectroscopy 89**
Jörg Hermann
 - 5.1 Introduction 89
 - 5.2 Validity Conditions of the Physical Model 90
 - 5.2.1 Congruent Mass Transfer from the Solid Sample Toward Plasma 90
 - 5.2.2 Local Thermodynamic Equilibrium 92
 - 5.2.3 Spatial Distribution of Plasma 93
 - 5.2.4 Self-Absorption 94
 - 5.2.5 Chemical Reactions 95
 - 5.3 Methods of Calibration-Free Measurements 98
 - 5.3.1 The Mathematical Problem of a Multielemental Equilibrium Plasma 98
 - 5.3.2 First CF-LIBS Method for Ideal Plasma 99
 - 5.3.3 Amended Methods 100
 - 5.3.4 Methods Based on Spectra Simulation 101
 - 5.3.4.1 Calculation of Spectral Radiance 101
 - 5.3.4.2 Implementation in Measurement Algorithm 104
 - 5.3.4.3 Illustration for Alloy 105
 - 5.4 Critical Review of Analytical Performance 107
 - 5.4.1 Model Validity 107
 - 5.4.2 Error Evaluation 107
 - 5.4.2.1 Minor and Trace Element Quantification 107
 - 5.4.2.2 Error due to Self-Absorption 109
 - 5.4.3 Recommendations 111
 - 5.4.3.1 Apparatus Requirements 111
 - 5.4.3.2 Setting the Experimental Conditions 111
 - 5.4.3.3 Selection of Spectral Lines 113
 - 5.4.4 Expected Improvements 114
 - 5.4.4.1 Evolution of the Spectroscopic Database 114
 - 5.4.4.2 Advanced Instrumentation 114
 - 5.4.4.3 Improved Knowledge of Laser-Induced Plasma 114
 - 5.5 Conclusion 115
References 115

- Part II Molecular LIBS and Instrumentation Developments 123**

- 6 Molecular Species Formation in Laser-Produced Plasma 125**
K. M. Muhammed Shameem, Swetapuspa Soumyashree, P. Madhusudhan, Vinitha Nimma, Rituparna Das, Pranav Bhardwaj and Rajesh K. Kushawaha
 - 6.1 Introduction 125
 - 6.2 Atmospheric Contribution in LIBS Spectra 127
 - 6.3 CN and C₂ Molecular Formation in LIP 127
 - 6.4 Summary 134
References 134

7 Recent Developments in Standoff Laser-Induced Breakdown Spectroscopy 137

Linga Murthy Narlagiri and Venugopal Rao Soma

- 7.1 Introduction 137
 - 7.2 Laser Systems Used 137
 - 7.3 Instrumentation in Standoff LIBS 138
 - 7.4 Gated and Non-Gated CCDs/Spectrometers 139
 - 7.5 Experimental Setup 139
 - 7.6 Reviews on Standoff LIBS 140
 - 7.7 Studies in Standoff LIBS 140
 - 7.8 Variants in Standoff LIBS 146
 - 7.9 Machine-Learning for Data Analysis in Standoff Mode 149
 - 7.10 Advancements in Standoff LIBS Methods 150
 - 7.11 Ongoing Study at ACRHEM, University of Hyderabad 153
 - 7.12 Conclusions and Outlook 158
- Acknowledgments 159
References 159

8 Nanoparticle-Enhanced Laser-Induced Breakdown Spectroscopy 165

Zita Salajková, Marcella Dell'Aglio, Vincent Gardette and Alessandro De Giacomo

- 8.1 Introduction 165
 - 8.2 Fundamentals 166
 - 8.2.1 Plasmon Excitation in NPs During NELIBS 166
 - 8.2.2 Broadening of the Plasmon Frequency due to Plasmon Coupling 167
 - 8.2.3 Local Field Enhancement 168
 - 8.2.4 Influence of Sample Properties on Laser Ablation Mechanism During NELIBS 170
 - 8.2.5 Nanoparticles Under a Strong Electromagnetic Field and Consequently in the Plasma Phase 171
 - 8.2.6 Origin of Plasma Emission Enhancement 173
 - 8.3 Applications 174
 - 8.3.1 Sample Preparation and Setup 174
 - 8.3.2 Application in the Field of Analytical Chemistry 175
 - 8.4 Conclusion 179
- References 179

9 Nanoparticle-Enhanced Laser-Induced Breakdown Spectroscopy for Sensing Applications 183

Linga Murthy Narlagiri and Venugopal Rao Soma

- 9.1 Introduction 183
- 9.2 Previous Reviews 183
- 9.3 Experimental Setup 184
- 9.4 Enhancement Via Different Conditions 185
- 9.5 Perspectives on the Mechanism(s) of Enhancement 191

- 9.6 Variations in NE-LIBS 199
 - 9.7 Beyond NE-LIBS 200
 - 9.8 Further Application of Nanoparticles in LIBS 202
 - 9.9 Ongoing Study in the Lab 203
 - 9.10 Conclusions 204
- References 205

Part III Data Analysis and Chemometrics in LIBS 211

10 Full-Spectrum Multivariate Analysis of LIBS Data 213

Catherine E. McManus and Nancy J. McMillan

- 10.1 Introduction 213
 - 10.2 Full-Spectrum Multivariate Analysis 215
 - 10.3 Analysis of Geologic Samples 216
 - 10.4 Identification of Pharmaceuticals 218
 - 10.4.1 Methods 218
 - 10.4.2 Acetaminophen 218
 - 10.4.3 Aspirin 222
 - 10.5 Conclusions 224
- References 224

11 Chemometrics for Data Analysis 229

Manoj Kumar Gundawar and Rajendhar Junjuri

- 11.1 Introduction 229
 - 11.2 Data 230
 - 11.3 Machine Learning 231
 - 11.3.1 Principal Component Analysis 234
 - 11.4 Classification of the Data 236
 - 11.4.1 Artificial Neural Network 236
 - 11.5 Conclusion 237
- References 238

12 Chemometric Processing of LIBS Data 241

J. El Haddad, A. Harhira, E. Képeš, J. Vrábel, J. Kaiser and P. Pořízka

- 12.1 Introduction 241
- 12.2 Exploratory Analysis Methods for Visualization 243
 - 12.2.1 Principal Component Analysis 244
- 12.3 Quantitative Analysis Methods 249
 - 12.3.1 Main Steps of Multivariate Calibration Before and After LIBS Measurements 250
 - 12.3.2 Multiple Linear Regression 251
 - 12.3.3 Principal Component Regression 251
 - 12.3.4 Partial Least Squares 252
- 12.4 Classification 254

- 12.4.1 Soft Independent Modeling of Class Analogy 255
- 12.4.2 Partial Least Squares-Discriminant Analysis 256
- 12.5 Data Preprocessing 257
 - 12.5.1 Baseline Correction 257
 - 12.5.2 Normalization 258
 - 12.5.2.1 Normalization to the Background 258
 - 12.5.2.2 Normalization to the Total Area 258
 - 12.5.2.3 Normalization to an Internal Standard 259
 - 12.5.2.4 Standard Normal Variate 259
 - 12.5.3 Scaling 259
- 12.6 Validation and Generalization 261
 - 12.6.1 Validation 261
 - 12.6.2 Generalization 264
 - 12.6.3 Figure of Merit 264
 - 12.6.3.1 Figures of Merit for Quantitative Models 265
 - 12.6.3.2 Figures of Merit for Classification Models 267
- 12.7 Conclusions 268
 - Acknowledgments 269
 - References 269
- 13 How Chemometrics Allowed the Development of LIBS in the Quantification and Detection of Isotopes: A Case Study of Uranium 277**
Carlos A. Rinaldi, Norberto Boggio and Juan Vorobioff
 - 13.1 Introduction 277
 - 13.2 The LIBS Method 278
 - 13.3 Detection and Quantification 279
 - 13.4 Chemometrics Solution 279
 - 13.4.1 LIBS Spectrum Processing 279
 - 13.4.2 Spectra Preprocessing 280
 - 13.4.3 Identification and Classification of Samples 281
 - 13.4.4 Concentration Measurement 281
 - 13.4.4.1 Subsets of Data and Cross-Validation 282
 - 13.4.5 PLS Algorithm 283
 - 13.4.6 Results Using Orange Software 283
 - 13.5 Conclusions 285
 - References 285
- 14 Application of Multivariate Analysis to the Problem of the Provenance of Gem Stones (Ruby, Sapphire, Emerald, Diamond) 287**
Nancy J. McMillan and Catherine E. McManus
 - 14.1 Introduction 287
 - 14.1.1 The Problem of Gem Provenance 287
 - 14.1.2 Analytical Methods Employed in the Determination of Gem Provenance 288
 - 14.2 Gem Mineral Genesis 289
 - 14.2.1 Corundum: Ruby and Sapphire Genesis 289
 - 14.2.2 Diamond Genesis 291
 - 14.2.3 Emerald Genesis 292
 - 14.2.4 Characteristics of a System to Determine Gem Provenance 292
 - 14.3 Laser-Induced Breakdown Spectroscopy and Multivariate Analysis 293
 - 14.3.1 Laser-Induced Breakdown Spectroscopy 293
 - 14.3.2 Multivariate Data Analysis 293
 - 14.4 Gem Provenance Studies 294
 - 14.4.1 Ruby and Sapphire 294
 - 14.4.2 Diamond 297
 - 14.4.3 Emerald 298
 - 14.5 Conclusions 300
 - References 300
- 15 Machine Learning in the Context of Laser-Induced Breakdown Spectroscopy 305**
E. Képeš, J. Vrábel, J. El Haddad, A. Harhira, P. Pořízka and J. Kaiser
 - 15.1 Introduction 305
 - 15.2 Fundamental Concepts of Machine Learning 306
 - 15.3 Decision Trees and Related Ensemble Methods 307
 - 15.3.1 Decision Trees 307
 - 15.3.2 Ensemble Models 309
 - 15.4 Support Vector Machines 311
 - 15.5 Artificial Neural Networks 314
 - 15.5.1 Artificial Neuron 314
 - 15.5.2 Fully Connected Multilayer Perceptrons 314
 - 15.5.3 Convolutional Neural Networks 316
 - 15.5.4 Training of Artificial Neural Networks 317
 - 15.6 Unsupervised Learning 318
 - 15.6.1 K-Means Clustering 318
 - 15.6.2 Autoencoder 319
 - 15.7 Self-Organizing Maps 319
 - 15.8 Concluding Remarks 320
 - Acknowledgement 321
 - References 321
- 16 Analysis of LIBS Data from Coal and Biomass Using Artificial Intelligence Techniques 331**
Carlos E. Romero and Robert De Saro
 - 16.1 Introduction 331
 - 16.2 LIBS Coal and Biomass Laboratory Experimental Results 334
 - 16.3 Application of Artificial Intelligence Techniques to LIBS Spectral Data 337
 - 16.3.1 LIBS Biomass Spectral Analysis Using Back-Propagation Neural Networks and Self-Organizing Map Networks 338
 - 16.3.1.1 Model Inputs 342

- 16.3.1.2 Modeling Results 344
- 16.4 Conclusions 349
References 350
- Part IV Special Topics and Comparison with Other Methods 353**
- 17 Lasing in Optically Pumped Laser-Induced Plasma 355**
Lev Nagli, Michael Gaft and Yosef Raichlin
- 17.1 Introduction 355
- 17.2 Experimental Setups and Samples 357
- 17.3 Lasing Effects in a LIP Plume; 13th Group Elements 360
- 17.3.1 Al; Ground Term $3s^2 3p^2 P_{1,2;3/2}$; $\Delta_{LS} = 0.013$ eV 360
- 17.3.1.1 Plasma Parameters 360
- 17.3.1.2 Stimulated Emission and Lasing, Intensities, and Directionality 360
- 17.3.2 Other 13th Group Elements LIPL 367
- 17.3.2.1 Ga; Ground-State Term $3s^2 4p^2 P_{1,2;3/2}$; $\Delta_{LS} = 0.1$ eV 367
- 17.3.2.2 In; Ground-State Term $3s^2 5p^2 P_{1,2;3/2}$; $\Delta_{LS} \approx 0.27$ eV 368
- 17.3.2.3 Tl; Ground-State Term $3s^2 6p^2 P_{1,2;3/2}$; $\Delta_{LS} \approx 0.94$ eV 368
- 17.4 Polarization of the LIPLs: the UV-VIS Generation 370
- 17.4.1 Al LIPL 370
- 17.4.1.1 Vector E_p Normal to the Generation Direction k_g 373
- 17.4.1.2 Vector E_p Parallel to the Generation Direction k_g 374
- 17.4.2 UV-VIS Generation of Other Elements from the 13th Group 375
- 17.4.2.1 In LIPL $3s^2 5p$ Ground State 375
- 17.4.2.2 Tl LIPL $3s^2 6p$ Ground State 375
- 17.5 External Magnetic Field Effects 376
- 17.6 Fourteenth GROUP Elements LIPL (Ground-State Configuration $4s^2 np^2 3P_0$, $n = 4,5,6$) 377
- 17.7 LIPLs Tunability 379
- 17.8 Conclusions 382
References 382
- 18 LIBS Analysis of Optical Surfaces and Thin Films 387**
Christoph Gerhard and Jörg Hermann
- 18.1 Introduction 387
- 18.2 Sensitivity-Improved Calibration-Free LIBS 389
- 18.3 Analysis of Optical Materials and Surfaces 392
- 18.3.1 Depth-Resolved Analysis of Impurities 392
- 18.3.2 Accuracy of Sensitivity-Improved Calibration-Free LIBS on Glasses 395
- 18.4 Elemental Analysis of Thin Films 395
- 18.4.1 Need of Quality Control in Thin Film Manufacturing Technology 395
- 18.4.2 Monitoring of Thin Film Synthesis 397
- 18.4.3 Probe Volume in LIBS Analysis of Thin Films 400
- 18.4.4 Accurate Analysis of Thin Films via Calibration-Free LIBS 400
- 18.4.4.1 Analyses in Ambient Air 400
- 18.4.4.2 Analyses in Argon Background Gas 404
- 18.5 Conclusion 407
Acknowledgments 408
References 408
- 19 LIBS Detection of Rare-Earth Elements and Comparison with Other Techniques 415**
Yashashchandra Dwivedi
- 19.1 Introduction 415
- 19.2 Importance of Rare Earth 416
- 19.3 Technological Challenges 417
- 19.4 Detection of RE Using LIBS 418
- 19.5 Detection of RE Using Other Techniques 423
References 425
- 20 Marine Biofouling Analysis by Laser-Induced Breakdown Spectroscopy 431**
Della Thomas
- 20.1 Introduction 431
- 20.2 Biofouling Sample Preparation 431
- 20.3 Experimental LIBS Setup 432
- 20.4 Analysis and Discussion 432
- 20.5 Biomineralization and Elemental Mapping Studies 437
- 20.6 LIBS Spectra for Biofouling Sample 437
- 20.7 LIBS Spatial Elemental Mapping 440
- 20.8 Conclusion 444
Acknowledgement 444

- 21 Hyphenated LIBS Techniques 447**
U. K. Adarsh, V. S. Dhanada, Santhosh Chidangil and V. K. Unnikrishnan
- 21.1 Introduction 447
- 21.1.1 Laser-Induced Breakdown Spectroscopy 448
- 21.1.2 Raman Spectroscopy 448
- 21.1.3 NIR Spectroscopy 448
- 21.1.4 Fluorescence Spectroscopy 449
- 21.2 Why Hyphenate Spectroscopic Methods? 449
- 21.2.1 Significance 449
- 21.2.2 Developmental Strategies 451
- 21.2.3 Hyphenated LIBS Systems 452
- 21.3 Conclusion and Future Directions 457
References 457
- 22 Comparison of LIBS with Other Analytical Techniques 461**
Muhammad Aslam Baig, Rizwan Ahmed and Zeshan Adeel Umar
- 22.1 Introduction 461
- 22.2 Quantitative Analysis by LIBS 462

22.2.1	Energy-Dispersive X-ray Spectroscopy	471
22.2.2	Proton-Induced X-ray Emission	473
22.2.3	X-ray Fluorescence Spectroscopy	474
22.2.4	Inductively Coupled Plasma – Optical Emission Spectrometry	475
22.3	Laser-Ablation Time-of-Flight Mass Spectrometry	476
22.4	Conclusion	482
