

Volume 2**Preface** *xix***Part V Novel Applications of LIBS** *531*

- 24 Application of LIBS to the Analysis of Metals** *533*
Francesco Poggialini, Asia Botto, Beatrice Campanella, Vincenzo Palleschi, Simona Raneri and Stefano Legnaioli
- 24.1 Introduction *533*
- 24.2 Laser-Induced Ablation on Metal Targets *534*
- 24.2.1 Wavelength and Pulse Duration Dependence *534*
- 24.2.2 Laser Pulse Energy Dependence *535*
- 24.3 LIBS Application to the Analysis of Metals *536*
- 24.3.1 Steel Analysis *536*
- 24.3.2 Aluminum Analysis *538*
- 24.3.3 Copper-Based Alloy Analysis *539*
- 24.3.4 Precious Alloys *541*
- 24.4 Innovative Experimental Setups for the Analysis of Metals *541*
- 24.5 Conclusions *543*
- References *543*
- 25 LIBS Analysis of Metals Under Extreme Conditions** *551*
Mohamed Abdel-Harith and Raghda Hosny El-Saeid
- 25.1 Introduction *551*
- 25.2 LIBS Analysis of Metals Under Extreme Conditions *552*
- 25.2.1 Effects of Ambient Gas and Its Pressure on LIBS Signal Intensity and Plasma Parameters *552*

- 25.2.2 Effects of Sample Temperature on LIBS Analysis of Metals 552
- 25.3 Under water LIBS Analysis 554
- 25.4 Conclusion 555
References 556
- 26 LIBS Applications to Liquids and Solids in Liquids 559**
Chet R. Bhatt, Daniel Hartzler, Jinesh Jain and Dustin L. McIntyre
- 26.1 Introduction 559
- 26.2 LIBS Instrumentation for Liquid Analysis 560
- 26.3 LIBS Measurements 561
- 26.3.1 Bulk Liquids 562
- 26.3.2 Submerged Solids 563
- 26.3.3 Surface Measurements 566
- 26.3.4 Measurements on Pretreated Samples (Concentrated Liquids) 568
- 26.4 Field-Deployable LIBS Sensor 569
- 26.4.1 Prototype Design 570
- 26.4.2 Performance 571
- 26.4.3 Subsurface Testing 571
- 26.5 Conclusions 572
Disclaimer 573
References 573
- 27 Coal Analysis by Laser-Induced Breakdown Spectroscopy 581**
Shunchun Yao
- 27.1 Introduction 581
- 27.2 Key Role of LIBS in the Analysis of Coal 581
- 27.3 Challenges to Coal Analysis by LIBS 582
- 27.3.1 Signal Uncertainty 582
- 27.3.2 Matrix Effect 582
- 27.3.3 Establishing Quantitative Analysis Model of Coal Property 583
- 27.4 Optimization Methods 584
- 27.4.1 Signal Stabilization Methods 584
- 27.4.2 Matrix Effect Correction 585
- 27.4.3 Chemometrics Methods 586
- 27.4.4 LIBS Combined with Infrared Spectroscopy 588
References 588
- 28 Application of LIBS to Terrestrial Geological Research 593**
Giorgio S. Senesi and Russell S. Harmon
- 28.1 Introduction: Why Is Laser-Induced Breakdown Spectroscopy Important for the Geosciences? 593
- 28.1.1 Attributes of LIBS for Geomaterial Analysis 593
- 28.2 Applications of LIBS Across Geosciences 594
- 28.2.1 Minerals 594
- 28.2.1.1 Gem Minerals 594
- 28.2.1.2 Precious Metals 596
- 28.2.1.3 Copper Ores 598
- 28.2.1.4 Garnets, Obsidians, and Zeolites 598
- 28.2.1.5 Other Applications 599
- 28.2.2 Rocks–Chemical Composition 600
- 28.2.2.1 Igneous Rocks 600
- 28.2.2.2 Sedimentary and Metamorphic Rocks 601
- 28.2.2.3 Classification/Discrimination Studies 603
- 28.2.3 Rocks –Physical Properties 604
- 28.2.4 Rare-Earth Elements 606
- 28.3 Future Prospects of Geo-LIBS 608
References 609
- 29 Plastic Waste Identification Using Laser-Induced Breakdown Spectroscopy 615**
Rajendhar Junjuri and Manoj Kumar Gundawar
- 29.1 Introduction 615
- 29.2 Experimental Details 616
- 29.3 Results and Discussion 617
- 29.3.1 Principal Component Analysis 618
- 29.3.2 Partial Least Squares Discriminant Analysis (PLS-DA) 619
- 29.4 Conclusions 620
References 621
- 30 Cultural Heritage Applications of Laser-Induced Breakdown Spectroscopy 623**
Duixiong Sun and Yaopeng Ying
- 30.1 Introduction 623
- 30.2 Case Studies of LIBS in Cultural Heritage 623
- 30.2.1 Pottery, Stone, Glass 623
- 30.2.2 Metals 625
- 30.2.3 Biomaterials 627
- 30.2.4 Laser-Cleaning Control 628
- 30.2.5 Pigments in Paintings 628
- 30.3 Summary 636
References 636
- 31 Nuclear Applications of Laser-Induced Breakdown Spectroscopy 643**
Gábor Galbács and Éva Kovács-Széles
- 31.1 Introduction 643
- 31.2 Analytical Potential of LIBS in the Nuclear Field 644
- 31.3 Applications Related to Nuclear Fission Facilities 645
- 31.3.1 Quantitative Elemental Analysis 646
- 31.3.1.1 Nuclear Materials 646
- 31.3.1.2 Structural and Engineering Materials 648

- 31.3.2 Isotope Analysis 650
- 31.4 Applications Related to Nuclear Fusion Facilities 650
 - 31.4.1 Plasma-Facing Components 651
 - 31.4.2 Fuel Retention 653
- 31.5 Applications to Deter or Investigate Malicious Acts Involving Nuclear Materials 655
- 31.6 Outlook 658
 - Acknowledgments 659
 - References 659
- 32 Applications of Laser-Induced Breakdown Spectroscopy for Trace Detection in Explosives 667**
Qianqian Wang and Geer Teng
 - 32.1 Introduction 667
 - 32.2 Fundamentals 668
 - 32.3 Instruments 671
 - 32.3.1 Indoor Inspection System 672
 - 32.3.2 Telemetry System 672
 - 32.4 Algorithms 673
 - 32.4.1 Feature Analysis and Selection 673
 - 32.4.2 Spectral Identification Methods 676
 - 32.5 Conclusions and Outlooks 678
 - References 679
- 33 Geochemical Fingerprinting Using Laser-Induced Breakdown Spectroscopy 683**
Pengju Xing and Zhenli Zhu
 - 33.1 Introduction 683
 - 33.2 Geochemical Fingerprints and LIBS 683
 - 33.3 LIBS for Geochemical Fingerprinting 685
 - 33.3.1 Qualitative and Quantitative Elemental Analysis of Geological Samples Using LIBS 685
 - 33.3.2 Identification and Classification of Geological Samples by LIBS 687
 - 33.3.3 Imaging of Geological Samples Using LIBS 688
 - 33.4 Prospect of LIBS for Geochemical Fingerprints 689
 - References 690
- 34 Laser-Induced Breakdown Spectroscopy for the Analysis of Chemical and Biological Hazards 701**
Lianbo Guo
 - 34.1 Introduction 701
 - 34.2 LIBS for Chemical Hazards Analysis 701
 - 34.2.1 Introduction to Chemical Hazards 701
 - 34.2.2 Detection of Inorganic Chemical Hazards by LIBS 701
 - 34.2.2.1 Detection of Metallic Elements 702
 - 34.2.2.2 Detection of Nonmetallic Elements 702
 - 34.2.3 Detection of Organic Chemical Hazards by LIBS 703
 - 34.3 LIBS for Biological Hazards Analysis 705
 - 34.3.1 Introduction to Biological Hazards 705
 - 34.3.2 Detection of Bacteria by LIBS 705
 - 34.3.2.1 Discrimination and Classification of Bacteria by LIBS 705
 - 34.3.2.2 Quantification of Bacteria by LIBS 708
 - 34.3.3 Detection of Virus by LIBS 710
 - 34.4 Conclusion 711
 - References 711
- 35 Development of a Simple, Low-Cost, and On-Site Deployable LIBS Instrument for the Quantitative Analysis of Edible Salts 715**
Sandeep Kumar, Hyang Kim, Jeong Park, Kyung-Sik Ham, Song-Hee Han, Sang-Ho Nam and Yonghoon Lee
 - 35.1 Chemical Composition of Salts: Introduction 715
 - 35.2 Laser-Induced Breakdown Spectroscopy for Salt Analysis 717
 - 35.3 Quantitative Analysis Using LIBS 719
 - 35.3.1 Sample Preparation Method and the Related Effects 719
 - 35.3.2 An Inexpensive Medium-Performance LIBS Instrument for Analysis of Mg, Ca, and K in Edible Salts 723
 - 35.3.3 A Compact On-Site Deployable LIBS Instrument for Analysis of Mg, Ca, and K in Edible Salts 725
 - 35.4 Conclusion 727
 - References 727
- 36 Bioimaging in Laser-Induced Breakdown Spectroscopy 729**
Pavlina Modlitbová, Pavel Pořízka and Jozef Kaiser
 - 36.1 Introduction 729
 - 36.2 Plants 730
 - 36.3 Animal and Human Soft Tissues 733
 - 36.4 Animal and Human Calcified Tissues 737
 - 36.5 Food Analysis 738
 - 36.6 Tag-LIBS 738
 - 36.7 Summary and Future Prospects 739
 - References 740
- 37 Laser-Induced Breakdown Spectroscopy for the Identification of Bacterial Pathogens 745**
Somenath Ghatak, Gaurav Sharma, Prashant Kumar Rai, Suman Yadav and Geeta Watal
 - 37.1 Introduction 745
 - 37.2 Standard Methodologies for Identifying Bacterial Species 745
 - 37.3 Identifying Bacterial Strains Using Laser-Induced Breakdown Spectroscopy 747

- 37.4 Future Prospects and Application of LIBS 751
 Acknowledgment 751
 References 751
- 38 Phase-Selective Laser-Induced Breakdown Spectroscopy of Metal-Oxide Nanoaerosols 755**
Gang Xiong and Stephen D. Tse
- 38.1 Introduction 755
 38.2 Experimental Setups 756
 38.3 Nanoparticle-Only Breakdown and Nanoplasma Formation by Low-Intensity Laser Excitation 757
 38.4 Breakdown and Resonant Excitation of Formed Plasma with a Single Pulse 759
 38.5 Tuning Primary Excitation Wavelength for Secondary Resonance 761
 38.6 Concluding Remarks 762
 Acknowledgments 763
 References 763
- 39 Laser-Induced Breakdown Spectroscopy for the Analysis of Cultivated Soil 767**
R. K. Aldakheel, M. A. Gondal and M. A. Almessiere
- 39.1 Introduction 767
 39.2 Soil Characteristics 768
 39.2.1 Chemical Traits 768
 39.2.2 Physical Characteristics (Soil Texture Class) 769
 39.3 LIBS System for Soil Classification 770
 39.4 LIBS Elemental Analysis for Cultivated Soil 772
 39.5 Conclusions 777
 Acknowledgment 778

J. Naozuka and A.P. Oliveira
- 40.1 Introduction 781
 40.1.1 LIBS Applications in Food Sciences 784
 40.1.1.1 Adulterations, Quality Control, and Classification 784
 40.1.1.2 Agricultural Applications 796
 40.1.1.3 Geographical Origin Identification 797
 40.1.1.4 Biological and Microbiological Assessment 797
 40.1.1.5 LIBS: Challenges and Limitations With Regard to Food Analysis 798
 References 799
- 41 Capabilities and Limitations of Laser-Induced Breakdown Spectroscopy for Analyzing Food Products 807**
R. K. Aldakheel, M. A. Gondal and M. A. Almessiere
- 41.1 Introduction 807
 41.2 Abilities and Limitations of the Analytical LIBS Method in Food and Herbal Products 808
- 41.3 The Multielemental Analytical LIBS Tool for Food-Analysis Applications 809
 41.3.1 Meat 809
 41.3.2 Milk and Its Products 810
 41.3.3 Vegetables and Fruits 811
 41.3.4 Other Food 813
 41.3.5 Teas 815
 41.3.6 Grains and Some of Their Products 816
 41.4 Conclusion 818
 Acknowledgments 818
 References 818
- 42 Laser-Induced Breakdown Spectroscopy and Its Application Perspectives in Industry and Recycling 823**
Reinhard Noll
- 42.1 Introduction 823
 42.2 Examples of Applications 824
 42.2.1 Fast, Spatially Resolved Material Analysis 824
 42.2.2 Mix-Up Inspection in a Rolling Mill 827
 42.2.3 Sorting of Refractories 829
 42.2.4 Sorting of Alloyed Metal Scrap 832
 42.2.5 LIBS as Key Methodology for Inverse Production of End-of-Life Electronics 834
 42.2.6 Compact LIBS Analyzers 843
 Acknowledgment 846

45 Application of LIBS for the Failure Characteristics Prediction of Heat-Resistant Steel 883

Meirong Dong, Junbin Cai, Shunchun Yao and Jidong Lu

- 45.1 Introduction 883
- 45.2 Properties and Failure Mechanism of Heat-Resistant Steel 884
- 45.3 Sample Preparation for LIBS Measurement 886
- 45.3.1 20G with Different Microstructure 887
- 45.3.2 12Cr1MoV with Different Structure Changes 888
- 45.3.2.1 Metallographic Structure 888
- 45.3.2.2 Pearlite Spheroidization 889
- 45.3.2.3 Grain Size Grade 889
- 45.3.3 T91 Steel with Different Aging Grade 890
- 45.4 Spectral Characteristics of Heat-Resistant Steel with Different Properties 893
- 45.4.1 Microstructure 893
- 45.4.2 Grade of Pearlite Spheroidization 894
- 45.4.3 Aging Grade 895
- 45.4.3.1 Correlation Between Emission Ratios and Aging Grade 895
- 45.4.3.2 Spatial and Temporal Characteristics 896
- 45.5 Application and Optimization of Multivariate Methods in the Failure Characteristics Prediction 902
- 45.5.1 Classification Analysis of 20G with Different Microstructures 902
- 45.5.2 Classification of 12Cr1MoV with Different Grades of Pearlite Spheroidization 904
- 45.5.3 Estimation of the Aging Grade of T91 907
- 45.5.4 Estimation of the Hardness of T91 Steel 910
- 45.5.5 Improvement of Feature Selection Methods 914
- 45.5.6 Combination of Spectral Pretreatment with Feature Selection Methods and Multi-Feature Coupling Modeling 919
- 45.6 Practical Application of Aging Grade Assessment in Industry 927
- 45.7 Conclusion and Outlook 932
