<b>Preface</b>	<b>xi</b>
<b>Acknowledgements</b>	<b>xii</b>
<b>Author biography</b>	<b>xiii</b>
<b>Part I Introduction</b>	
<b>1 Introduction</b>	<b>1-1</b>
1.1 Background for controlled thermonuclear fusion researches	1-1
1.2 From fluid to kinetic descriptions	1-2
1.3 Scope of the book	1-3
References	1-3
<b>Part II General theoretical formalism</b>	
<b>2 Charged particle motion in an electromagnetic field</b>	<b>2-1</b>
2.1 Introduction	2-1
2.2 Guiding center motion of charged particles	2-3
2.3 Energy conversion and adiabatic invariants	2-6
2.3.1 Energy conservation and conversion	2-6
2.3.2 Magnetic moment	2-8
2.3.3 Longitudinal invariant	2-9
2.3.4 The third or flux adiabatic invariant	2-13
2.4 Conclusions and discussion	2-15
References	2-15
<b>3 Lagrangian and Hamiltonian theories of guiding center motion</b>	<b>3-1</b>
3.1 The Lagrangian and Hamiltonian theories	3-1
3.1.1 Canonical Lagrangian and Hamiltonian theories	3-2
3.1.2 Lagrangian and Hamiltonian theories in phase space	3-7
3.2 Guiding center Lagrangian in phase space	3-10
3.3 Noether's theorem, invariants, and adiabatic invariants	3-14
3.4 Lie transform perturbation theory	3-17
3.5 Lie transform theory for guiding center motion	3-24
3.6 Modification of the Lie transform for describing the guiding center motion	3-33
3.7 Conclusions and discussion	3-36
References	3-36

<b>4 Drift kinetic theory</b>	<b>4-1</b>	<b>8 Electrostatic modes</b>	<b>8-1</b>
4.1 The drift kinetic equation and its recursive derivation	4-2	8.1 General theoretical framework	8-1
4.2 Kinetic equations in transport time scale	4-9	8.2 The low frequency regime	8-4
4.3 Conclusions and discussion	4-14	8.3 The intermediate frequency regime	8-6
References	4-14	8.3.1 Fluid correspondence	8-8
		8.3.2 Slab-like branch	8-11
		8.3.3 Toroidal branch	8-15
<b>5 Gyrokinetic theory</b>	<b>5-1</b>	8.4 The comparable frequency regime	8-19
5.1 Linear gyrokinetic theory	5-2	8.4.1 Slab-like branch	8-19
5.1.1 Mode representation	5-2	8.4.2 Toroidal branch	8-21
5.1.2 Derivation of linear gyrokinetic equation	5-4	8.5 Conclusions and discussion	8-24
5.1.3 Equilibrium solution	5-10	References	8-24
5.1.4 Solution of linear gyrokinetic equation	5-12		
5.2 Nonlinear gyrokinetic theory	5-13	<b>9 Electromagnetic modes</b>	<b>9-1</b>
5.3 Lie transform perturbation theory for gyrokinetics	5-15	9.1 General framework	9-1
5.4 Conclusions and discussion	5-21	9.1.1 Basic set of equations	9-2
References	5-22	9.1.2 Recovery of ideal MHD from gyrokinetics	9-4
		9.1.3 Global mode formulation	9-12
		9.1.4 High $n$ ballooning mode formulation	9-18
<b>6 Variational theories in the guiding center description</b>	<b>6-1</b>	9.2 Kinetic ballooning modes in the low frequency regime	9-21
6.1 Lagrangian and Euler descriptions of magnetic perturbations	6-1	9.3 Kinetic ballooning modes in the comparable frequency regime	9-27
6.1.1 Lagrangian description	6-3	9.4 Kinetic theory in the intermediate frequency regime	9-30
6.1.2 Eulerian description	6-4	9.4.1 Toroidal Alfvén eigenmodes	9-30
6.2 Energy principle in the guiding center description	6-5	9.4.2 Kinetic toroidal Alfvén eigenmodes	9-38
6.3 Generalized energy principle for energetic particles	6-9	9.5 Collisional effects	9-47
6.4 Conclusions and discussion	6-12	9.6 Conclusions and discussion	9-48
References	6-12	References	9-49
<b>Part III Applications: Stability analyses</b>		<b>10 Energetic particle theory</b>	<b>10-1</b>
<b>7 Fundamentals of kinetic analysis of plasma oscillations</b>	<b>7-1</b>	10.1 Background: from the rigid current model to kinetic description	10-1
7.1 The kinetic theory by L Landau	7-2	10.2 Energetic particle effects on ballooning modes	10-2
7.2 The Case–Van Kampen theory	7-5	10.3 Energetic particle modified Mercier criterion	10-6
7.2.1 Continuum spectrum	7-5	10.4 Energetic particle modes (EPMs)	10-11
7.2.2 The Case–Van Kampen theory	7-7	10.5 Fishbone instabilities	10-16
7.3 Nonlinear effects, BGK theory	7-10	10.6 Nonlinear theory of kinetic instabilities near threshold	10-19
7.4 Conclusions and discussion	7-13	10.7 Conclusions and discussion	10-24
References	7-13	References	10-25

**Part IV Concluding remarks**

<b>11 The beauty and simplicity in controlled fusion research</b>	<b>11-1</b>
References	11-5
<b>Appendix A: Table of integrals and vector formula</b>	<b>A-1</b>
<b>Appendix B: Supplementary derivation of drift kinetic equation</b>	<b>B-1</b>
<b>Appendix C: Acronym list</b>	<b>C-1</b>
