Preface	xvii
CHAPTER 1 ■ Fundamentals	1
1.1 INTRODUCTION	1
1.2 GAS SIMULATION APPROACHES	1
1.2.1 Direct Method	2
1.2.2 Boltzmann Equation	3
1.2.3 Maxwell-Boltzmann Distribution Function	5
1.2.4 Fluid and Kinetic Methods	6
1.2.5 Lagrangian and Eulerian Descriptions	8
1.2.6 Comparison of Fluid and Kinetic Approaches	9
1.3 ELECTROSTATIC PARTICLE IN CELL METHOD	11
1.3.1 Lorentz Force	11
1.3.2 Maxwell's Equations	12
1.3.3 Poisson's Equation	13
1.3.4 Simulation Main Loop	13
1.4 SINGLE PARTICLE MOTION	14
1.4.1 Domain Discretization	15
1.4.2 Finite Difference Method	19
1.4.3 Potential Solver	20
1.4.3.1 Tridiagonal Algorithm	21
1.4.3.2 Jacobi Iteration	23
1.4.3.3 Gauss-Seidel Scheme	24
1.4.3.4 Successive Over Relaxation	24
1.4.3.5 Convergence Check	25
1.4.4 Electric Field	27
1.4.5 Particle Motion	29

1.4.5.1	Forward Euler Method	30	2.7.3	Node Volumes	77
1.4.5.2	Backward Euler	31	2.7.4	Scatter: Particle to Mesh Interpolation	78
1.4.5.3	Leapfrog Method	31	2.7.5	Number Density	81
1.4.5.4	Alternative Approaches	33	2.8 CHARGE DENSITY		81
1.4.6	Interpolation	34	2.8.1	Numerical Noise	82
1.4.7	Diagnostics	36	2.8.2	Quiet Start	83
1.5 SUMMARY		41	2.9 PARTICLE PUSH		85
CHAPTER 2 ■ Grounded Box		45	2.9.1	Gather: Mesh to Particle Interpolation	86
2.1 INTRODUCTION		45	2.9.2	Velocity and Position Update	87
2.2 SIMULATION SETUP		45	2.9.3	Particle Boundary Check	88
2.2.1	Pseudocode	46	2.9.4	Velocity Rewind	89
2.3 WORLD OBJECT		47	2.9.5	Time Step	91
2.3.1	Constructor	48	2.10 DIAGNOSTICS		92
2.3.2	Declaration and Implementation	49	2.10.1	Elapsed Time	94
2.3.3	Multiple Files	50	2.10.2	Particle Counts, Momentum, and Energy	94
2.3.4	Header Guards	52	2.10.3	Animation	95
2.3.5	Implementation	52	2.11 MAIN LOOP		96
2.3.6	Mesh Resolution	53	2.12 RESULTS		97
2.4 FIELD OBJECT		54	2.12.1	Convergence Check	98
2.4.1	Memory Allocation	55	2.13 SUMMARY		98
2.4.2	Operator Overloading	56	CHAPTER 3 ■ Flow Around a Sphere		103
2.4.3	Templates	58	3.1 INTRODUCTION		103
2.4.4	Move and Copy Constructors	59	3.2 SIMULATION DOMAIN		103
2.4.5	Additional Operators	60	3.3 POTENTIAL SOLVER		105
2.4.6	Output	61	3.3.1	Sugarcubing	105
2.4.7	Three-Component Vectors	61	3.3.2	Neumann Boundaries	107
2.4.8	Adding Fields to World	63	3.3.3	Boltzmann Electron Model	108
2.4.9	Initial Output	63	3.3.4	Non-Linear Poisson Solver	109
2.4.10	Visualization	65	3.4 PARTICLE INJECTION AND REMOVAL		112
2.5 POTENTIAL SOLVER		66	3.4.1	Cold Beam Source	113
2.6 ELECTRIC FIELD		70	3.4.2	Particle Removal	115
2.7 PARTICLES		72	3.4.3	Alternate Storage Schemes	117
2.7.1	Particle Loading	73	3.5 STEADY STATE AND DATA AVERAGING		118
2.7.2	Random Numbers	74	3.6 POTENTIAL SOLVER REVISITED		121

3.6.1	Matrix Representation	122	4.10	DISCRETIZED SURFACES	176
3.6.2	Sparse Matrix	124	4.10.1	Line Triangle Intersection	177
3.6.3	Preconditioned Conjugate Gradient Solver	127	4.10.2	Particle Impacts	178
3.6.4	Newton-Raphson Linearization	129	4.10.3	Caveats	179
3.6.5	Quasi-Neutral Approximation	132	4.11	SUMMARY	180
3.7	SUMMARY	134	CHAPTER 5	■ Symmetry	183
CHAPTER 4	■ Material Interactions	137	5.1	INTRODUCTION	183
4.1	INTRODUCTION	137	5.2	SYMMETRY	183
4.2	MULTIPLE SPECIES	137	5.2.1	Domain Boundary Condition	183
4.3	SURFACE INTERACTIONS	138	5.2.2	Particles	184
4.3.1	Rebound Algorithm	138	5.2.3	Results	185
4.3.2	Diffuse Reflection	141	5.3	PERIODIC SYSTEMS	185
4.3.3	Reflection Velocity	143	5.3.1	Domain Boundary	186
4.3.4	Species Change	144	5.3.2	Particles	188
4.3.5	Sputtering and Surface Emission	145	5.3.3	Density Synchronization	188
4.4	WARM BEAM	146	5.3.4	Results	189
4.4.1	Velocity Sampling	149	5.4	TWO-DIMENSIONAL CODES	189
4.4.2	Particle Merge	153	5.5	PLANAR (XY) CODES	190
4.5	DIAGNOSTICS	154	5.5.1	Node Volumes	191
4.5.1	Macroscopic Properties	154	5.5.2	Data Containers	192
4.5.2	Macroparticle Count	158	5.5.3	Scatter and Gather	193
4.5.3	Particle Plots	159	5.5.4	Output	194
4.6	COLLISIONS	162	5.6	AXISYMMETRIC (RZ) CODES	194
4.6.1	Collision Cross Section	163	5.6.1	Node Volumes	194
4.6.2	Collision Modeling	164	5.6.2	Finite Volume Method	195
4.6.3	Chemistry	164	5.6.3	Particle Source	198
4.6.4	Monte Carlo Collisions (MCC)	166	5.6.4	Scatter and Gather	199
4.7	DSMC	168	5.6.5	Particle Rotation	200
4.7.1	Particle Sorting	169	5.6.6	Results	202
4.7.2	Collision Groups	169	5.7	SUMMARY	202
4.7.3	Collision Probability	170	CHAPTER 6	■ Unstructured Meshes	205
4.7.4	Momentum Exchange Collision Handler	171	6.1	INTRODUCTION	205
4.8	SUBCYCLING	173			
4.9	DIELECTRIC BOUNDARIES	174			

6.2	MESH GEOMETRY	205
6.2.1	Mesh Generation	206
6.2.2	Mesh Formats	207
6.2.3	Mesh Import	210
6.2.4	Cell Volumes	212
6.2.5	Field Object	212
6.2.6	Node Volumes	213
6.2.7	Output	213
6.3	PARTICLE INJECTION	215
6.4	MESH INTERPOLATION	217
6.4.1	Shape Factors	218
6.4.2	Cell Search	220
6.4.3	Cell Neighbors	222
6.4.4	Scatter and Gather	223
6.5	PARTICLE MOTION	224
6.5.1	Number Density	224
6.5.2	Neutral Results	225
6.6	FINITE ELEMENT METHOD	225
6.6.1	Strong Form	226
6.6.2	Weak Form	226
6.6.3	Galerkin Form	227
6.6.4	Formulation with Shape Functions	228
6.6.5	Matrix Form	228
6.6.6	Element View	230
6.6.7	Matrix Assembly	231
6.6.8	Quadrature	231
6.6.9	Shape Functions	233
6.6.10	Coordinate Transformation	234
6.6.11	Single Element Algorithm	235
6.6.12	Derivatives	236
6.6.13	Tetrahedral Element	236
6.7	PUTTING IT ALL TOGETHER	237
6.7.1	Initialization	237
6.7.2	Matrix Assembly	238
6.7.3	Shape Function Derivatives	240
6.7.4	Nonlinear Solver	242

6.7.5	Solution Assembly	244
6.7.6	Electric Field	245
6.7.7	Results	245
6.8	SUMMARY	245
CHAPTER 7	Electromagnetics	249
7.1	INTRODUCTION	249
7.2	CLASSIFICATION	249
7.3	MAGNETIZATION	249
7.3.1	Boris Push	250
7.4	MAGNETOSTATICS	253
7.4.1	Vector Potential	254
7.4.2	Scalar Potential	254
7.4.3	Magnetized Sphere	255
7.5	ELECTROMAGNETIC PIC	258
7.5.1	Curl	259
7.5.2	Staggered Grid	260
7.5.3	Time Integration	261
7.5.4	Boundary Conditions	262
7.5.5	Gauss' Law	262
7.5.6	Putting It All Together	263
7.5.7	Approximations	264
7.5.8	Relativistic Push	264
7.5.9	Example	265
7.6	SUMMARY	269
CHAPTER 8	Eulerian Methods	273
8.1	INTRODUCTION	273
8.2	MAGNETOHYDRODYNAMICS	273
8.2.1	Conservation Equations	273
8.2.2	Single Fluid MHD Equations	276
8.3	ADVECTION-DIFFUSION EQUATION	278
8.3.1	Steady State Form	279
8.3.2	Unsteady Problem	283

8.3.3	Stability Analysis	286
8.3.4	Alternative Time Integration Methods	287
8.3.5	Example	289
8.4	ELECTRON MODELS	293
8.4.1	Polytropic Relationship	294
8.4.2	Detailed Electron Model	295
8.5	VLASOV SOLVERS	296
8.5.1	Two-Stream Instability Example	297
8.6	SUMMARY	302
CHAPTER 9	Parallel Programming	305
9.1	INTRODUCTION	305
9.2	ARCHITECTURES	305
9.2.1	Multithreading	307
9.2.2	MPI	308
9.2.3	CUDA	310
9.3	CAVEATS	311
9.3.1	Race Condition	311
9.3.2	Locks	312
9.3.3	Deadlock	313
9.3.4	Overhead	314
9.4	PROFILING	317
9.5	PARALLELIZATION STRATEGIES	318
9.5.1	Domain Decomposition	318
9.5.2	Ensemble Averaging	319
9.5.3	GPU Concurrent Computing	319
9.6	EXAMPLES	320
9.6.1	Multithreaded Particle Push	320
9.6.1.1	Number of Threads	321
9.6.1.2	Density Calculation	321
9.6.1.3	Parallel Efficiency	323
9.6.2	MPI Domain Decomposition	323
9.6.2.1	Subdomains	324
9.6.2.2	Particle Transfer	326
9.6.2.3	Boundary Update	329

9.6.2.4	Potential Solve	331
9.6.3	CUDA Potential Solve	333
9.7	SUMMARY	336
