DETERMINATION OF OPERATIONAL QUANTITIES FOR NEUTRONS

CONTENTS

THE INTERNATIONAL COMMISSION ON RADIATION UNITS AND MEASUREMENTS
CONTENTS
ABSTRACT
EXECUTIVE SUMMARY
INTRODUCTION
QUANTITIES AND THEIR RELATIONS
Radiation quality and dose equivalent 17 Operational quantities. 17
Relation to basic physical quantities
PRINCIPLES OF MEASUREMENT
General characteristics of neutron fields21Response of a measuring instrument22General measurement methods22
Measurements in mixed neutron-photon fields 25 Accuracy requirements 26
NEUTRON FIELD CHARACTERISATION
Introduction. 27 Neutron fluence spectrometry 27 Multi-sphere systems 27 Physical characteristics 27 Response functions 27
Spectrum unfolding 29 Response to photons 29
Other spectrometric methods.29Measurement of the direction distribution of neutron fluence30Dose spectrometry32
METHODS FOR ROUTINE MONITORING

DETERMINATION OF OPERATIONAL QUANTITIES FOR NEUTRONS

	Considerations for selecting a monitoring method
	Nuclear emulsions and photographic film
	Method
	Thermoluminescent detectors
	Method 38
	Performance characteristics
	Application
	Etched-track detectors
	Method
	Performance characteristics
	Application
	$Method \qquad \dots \qquad $
	Application \ldots \ldots \ldots \ldots 4ϵ
	Semiconductor detectors
	Method
	Performance characteristics
	$Application \dots \dots \dots \dots \dots \dots \dots \dots \dots $
	Tissue-equivalent proportional counters
	Method
	$Application \dots \dots \dots \dots \dots \dots \dots \dots \dots $
	Recombination chambers 49
	Method 49
	Performance characteristics
	Application 50
	Moderator-based survey instruments
	Method
	$Performance \ characteristics \ldots \ldots$
	Application
MEASUI	EMENT IN HIGH-ENERGY NEUTRON FIELDS
	Introduction
	Active devices for determining $H^*(10)$
	Passive devices for determining $H^*(10)$ and/or $H_p(10)$
	Neutron spectra
DOSIME	TRY FOR IRRADIATION OF THE EXTREMITIES
CALIBRA	ATION
	Introduction
	$Procedure \dots \dots \dots \dots \dots \dots \dots \dots \dots $
	$Ke ference \ radiations \ and \ reference \ values \ \ldots \ $

$Routine \ checks. \ \ldots \ $		
Field-specific corrections 61 General procedures 61 Simplified procedures for albedo dosemeters 61 Field stability checks 62		
CONCLUSIONS		
APPENDIX 1: ROLE OF COMPUTATIONAL METHODS IN THE DETERMINATION OF OPERATIONAL DOSE EQUIVALENT QUANTITIES FOR NEUTRONS		
Introduction		
Principles of calculation of conversion coefficients 66 Calculated conversion coefficient data 67		
Computational methods for the determination of the fluence response of dosimetric devices 67 Requirements for the fluence response of dosemeters 67 Calculation of response functions 68		
Computational methods for the determination of the energy distribution of neutron fluence 68 Unfolding procedures and associated codes 68 Assessment of uncertainties in unfolding procedures 70		
Computational methods in the analysis of radiation environments 70 Simulated workplace neutron fields for calibration purposes 70 Reconstruction of workplace neutron fields 71 Computational investigation in working environments 71		
APPENDIX 2: CONVERSION COEFFICIENTS FOR OPERATIONAL QUANTITIES		
Introduction.73Conversion coefficients for monoenergetic neutrons73Conversion coefficients for continuous neutron spectra73Conversion coefficients for high-energy neutrons73		
APPENDIX 3: LITERATURE REVIEW OF RESPONSE CALCULATIONS FOR MULTI-SPHERE SPECTROMETERS
