

CONTENTS OF PART A

| | |
|--|-----|
| Preface, <i>M.A. Abdou</i> | v |
| ISFNT-4 Committee Members | vii |
| I. ITER, Burning Plasmas, Large Devices, and other National Programs | |
| Design and issues of the ITER in-vessel components: ITER Joint Central Team and Home Teams, <i>R.R. Parker</i> | 1 |
| ITER safety and operational scenario, <i>ITER Joint Central Team, Y. Shimomura and G. Saji</i> | 17 |
| Status of ITER technology R&D in Japan, <i>S. Matsuda</i> | 33 |
| Status of ITER research and development in the USA, <i>C.C. Baker and US Home Team</i> | 43 |
| Status of ITER R&D in the Russian Federation, <i>O.G. Filatov and RF Home Team</i> | 55 |
| Site requirements for ITER, <i>K. Tomabechi</i> | 67 |
| Recent results and engineering experiences from JT-60, <i>H. Kishimoto, M. Nagami and M. Kikuchi</i> | 73 |
| Results of DIII-D operation with new enabling technologies, <i>DIII-D Team and T.C. Simonen</i> | 83 |
| Present status of LHD construction and experimental program, <i>O. Motojima</i> | 91 |
| Fusion research activities in China, <i>X. Deng</i> | 99 |
| Control of the vertical instability in advanced tokamak, <i>F.Z. Li, Q.D. Gao and J.H. Zhang</i> | 109 |
| Operation of the negative-ion based NBI for JT-60U, <i>M. Kuriyama, N. Akino, T. Aoyagi, N. Ebisawa, N. Isozaki, A. Honda, T. Inoue, T. Itoh, M. Kawai, M. Kazawa, J. Koizumi, K. Mogaki, Y. Ohara, T. Ohga, Y. Okumura, H. Oohara, K. Ohshima, F. Satoh, T. Takenouchi, Y. Toyokawa, K. Usui, K. Watanabe, M. Yamamoto, T. Yamazaki and C. Zhou</i> | 115 |
| Beamline performance of 500 keV negative ion-based NBI system for JT-60U, <i>T. Itoh, N. Akino, T. Aoyagi, N. Ebisawa, A. Honda, T. Inoue, N. Isozaki, M. Kawai, M. Kazawa, J. Koizumi, M. Kuriyama, K. Mogaki, Y. Ohara, T. Ohga, Y. Okumura, H. Oohara, K. Ooshima, F. Satoh, H. Seki, R. Toyokawa, T. Takenouchi, K. Usui, K. Watanabe, T. Yamazaki and M. Yamamoto</i> | 123 |
| IRCH system for HT-7 superconducting Tokamak, <i>X.K. Yang, Z.S. Wang, Y.P. Zhao, Y.G. Shao, D.Z. Xu, D.Y. Xue, X. Deng and J.Y. Ding</i> | 129 |
| All metal support for a central conductor of the ITER ICRF antenna system, <i>S. Moriyama, H. Kimura, M. Saigusa, T. Fujii, H. Arai, H. Ueda, K. Ohta and K. Kamakura</i> | 135 |
| Effect of the poloidal field coil system on the ramp-up scenario with L/H transition, <i>T. Yamamoto, Y. Ogawa and N. Inoue</i> | 143 |
| Laser application in the current profile control and pressure distribution in tokamaks and stellarators, <i>I.N. Morozov, A.F. Nastoyashchii, S.Y. Gus'kov, N.N. Demchenko, V.B. Rozanov and L.M. Kovrizhnykh</i> | 151 |

| | |
|--|-----|
| Pellet-injection in tokamaks and stellarators based on high-power long-wave lasers, <i>A.F. Nastoyashchii, I.N. Morozov and N.N. Demchenko</i> | 157 |
| Feedback control of radiation region in radiative divertor plasma on JT-60U tokamak, <i>H. Tamai, S. Konoshima, N. Hosogane, N. Asakura, S. Sakata, N. Saito, K. Akiba, H. Akasaka, Y. Kawamata and K. Kurihara</i> | 163 |
| Real-time plasma control system for LHD, <i>K. Nishimura, K. Yamazaki, M. Shoji, H. Chikaraiishi, H. Yamada, K. Watanabe and O. Motojima</i> | 169 |

II. First Wall Technology and High Heat Flux components

| | |
|--|-----|
| Divertor development for ITER, <i>G. Janeschitz, T. Ando, A. Antipenkov, V. Barabash, S. Chiochio, G. Federici, C. Ibbott, R. Jakeman, R. Matera, E. Martin, H.D. Pacher, R. Parker and R. Tivey</i> | 173 |
| Overview of advanced techniques for fabrication and testing of ITER multilayer plasma facing walls, <i>A.-A.F. Tavassoli</i> | 189 |
| Materials effects and design implications of disruptions and off-normal events in ITER, <i>A. Hassanein, G. Federici, I. Konkashbaev, A. Zhitlukhin and V. Litunovsky</i> | 201 |
| Overview of the EU small scale mock-up tests for ITER high heat flux components, <i>G. Vieider, V. Barabash, A. Cardella, P. Chappuis, R. Duwe, H. Falter, M. Febvre, L. Giancarli, C. Ibbott, D.M. Jacobson, R. Jakeman, G. LeMarois, A. Lind, M. Merola, H.D. Pacher, A. Peacock, A. Pizzuto, L. Plöchl, B. Riccardi, M. Rödig, S.P.S. Sangha, Y. Severi and E. Visca</i> | 211 |
| Overview of the Japanese mock-up tests for ITER high heat flux components, <i>M. Akiba and S. Suzuki</i> | 219 |
| Hydrogen retention properties of polycrystalline tungsten and helium irradiated tungsten, <i>T. Hino, K. Koyama, Y. Yamauchi and Y. Hirohata</i> | 227 |
| Design, fabrication and testing of an improved high heat flux element, experience feedback on steady state plasma facing components in Tore Supra, <i>J. Schlosser, P. Chappuis, M. Chatelier, A. Durocher, D. Guilheim, M. Lipa, R. Mitteau, L. Ploch, G. Tonon and E. Tsitrone</i> | 235 |
| Local island divertor for the new edge control scenario, <i>A. Komori, N. Ohyabu, A.C. England, D.E. Greenwood, N. Inoue, C.C. Klepper, S. Kubo, D.K. Lee, J.F. Lyon, S. Masuzaki, T. Minami, T. Morisaki, S. Morita, K. Nishimura, S. Ohdachi, S. Okamura, D.R. Overbey, J.A. Rome, S. Sakakibara, D.E. Schechter, H. Suzuki, C. Takahashi, K. Tanaka, K. Watanabe, T. Watanabe, C.T. Wilson, H. Yamada, A. Yonezu, K. Matsuoka, O. Motojima, M. Fujiwara and A. Iiyoshi</i> | 241 |
| Developments and high heat flux tests of divertor components for LHD, <i>Y. Kubota, N. Noda, A. Sagara, R. Sakamoto, O. Motojima, I. Fujita, T. Hino, T. Yamashina, K. Tokunaga and N. Yoshida</i> | 247 |
| Structural materials joints for ITER in-vessel components, <i>G. Le Marois, H. Burlet, R. Solomon, B. Marini, J.M. Gentzbittel and L. Briottet</i> | 253 |
| EU results on neutron effects on PFC materials, <i>C.H. Wu, J.P. Bonal, H. Kwast, F. Moons, G. Pott, H. Werle and G. Vieider</i> | 263 |
| On the utilization of high Z materials as a plasma facing component, <i>T. Tanabe, M. Akiba, Y. Ueda, K. Ohya, M. Wada and V. Philipps</i> | 275 |
| Response of plasma-facing materials to high transient heat loads in a tokamak, <i>H. Bolt, T. Scholz, J. Boedo, K.H. Finken, A. Hassanein and J. Linke</i> | 287 |

| | |
|---|-----|
| Disruption erosions of various kinds of tungsten, <i>K. Nakamura, S. Suzuki, T. Tanabe, M. Dairaku, K. Yokoyama and M. Akiba</i> | 295 |
| Study of material response in disruption simulation experiments with variable irradiation duration, <i>V.N. Litunovsky, A.A. Drozdov, V.E. Kuznetsov, I.B. Ovchinnikov and V.A. Titov</i> | 303 |
| Distribution of ionized carbon during simulated plasma disruption using spectroscopy, <i>T. Sukegawa, K. Okamoto and H. Madarame</i> | 309 |
| BIE analysis of transient heat transfer driven by high heat flux, <i>T. Goto and M. Suzuki</i> | 317 |
| High heat flux thermal–hydraulic analysis of ITER divertor and blanket systems, <i>A.R. Raffray, S. Chiochio, K. Ioki, D. Krassovski, D. Kubik and R. Tivey</i> | 323 |
| A vented pump limiter for the reversed field pinch RFX, <i>P. Sonato</i> | 333 |
| Numerical analysis of radiative heat flux on large helical device, <i>M. Higano, S. Maruyama and T. Takagi</i> | 341 |
| Enhancement of subcooled flow boiling critical heat flux for water in tubes with internal twisted tapes under one-sided-heating conditions, <i>F. Inasaka and H. Nariai</i> | 347 |
| Development of plasma facing component for LHCD antenna, <i>S. Maebara, M. Seki, Y. Ikeda, S. Suzuki, K. Yokoyama, K. Suganuma, K. Kiyono, Y. Suzuki, T. Okuyama, F. Saito and T. Imai</i> | 355 |
| High heat flux testing of a HIP bonded first wall panel with built-in circular cooling tubes, <i>T. Hatano, S. Suzuki, K. Yokoyama, T. Suzuki, I. Tokami, K. Kitamura, T. Kuroda, M. Akiba and H. Takatsu</i> | 363 |
| Development of a compact W-shaped pumped divertor in JT-60U, <i>S. Sakurai, N. Hosogane, K. Masaki, K. Kodama, T. Sasajima, K. Kishiya, S. Takahashi, K. Shimizu, N. Akino, Y. Miyo, H. Hiratsuka, M. Saidoh, M. Inoue, T. Umakoshi, M. Onozuka and M. Morimoto</i> | 371 |
| Design of the ITER EDA plasma facing components, <i>A. Cardella, S. Chiochio, K. Ioki, G. Janeschitz, R.R. Parker, A. Lodato, R. Tivey, L. Bruno, R. Jakeman, K. Mohri, R. Raffray, G. Vieider, P. Lorenzetto, A. Epinatiev and L. Giancarli</i> | 377 |
| High heat flux tests of mock-ups for ITER divertor application, <i>R. Giniatulin, A. Gervash, V.L. Komarov, A. Makhankov, I. Mazul, N. Litunovsky and N. Yablokov</i> | 385 |
| Experimental studies on the behavior of carbon-containing molecules in the boundary plasma, <i>S. Matsuyama, K. Yamaguchi, S. Tanaka and M. Yamawaki</i> | 393 |
| Thermal fluxes due to plasma-wall interactions: Experimental measurements and numerical analyses, <i>P. Sonato and P. Zaccaria</i> | 401 |
| Advanced solutions for beryllium and tungsten plasma-facing components, <i>C. Ibbott, R. Jakeman, T. Ando, P. Chappuis, S. Chiochio, H. Falter, D. Ciric, G. Federici, H. Heidl, M. Merola, L. Plöchl, M. Rödiger, R. Tivey and G. Vieider</i> | 409 |
| Influence of high heat flux loading and irradiation on some promising candidate materials for the divertor structure, <i>G.G. Bondarenko and Y.Y. Udris</i> | 419 |
| Hydrogen and helium retention properties of B ₄ C and SiC converted graphites, <i>Y. Yamauchi, Y. Hirohata and T. Hino</i> | 427 |
| Erosion behaviour of boron carbide under high-power pulsed fluxes of hydrogen plasma, <i>J. Langner, J. Piekoszewski, M. Sadowski, G.P. Glazunov, E.D. Volkov, O.S. Pavlichenko, O. Motojima, V.I. Tereshin and J. Stanislawski</i> | 433 |

| | |
|---|-----|
| Japanese universities' activities for PFC development and PMI studies, <i>T. Hino</i> | 439 |
| Tritium inventory in the ITER PFC's: Predictions, uncertainties, R&D status and priority needs, <i>G. Federici, R. Anderl, J.N. Brooks, R. Causey, J.P. Coad, D. Cowgill, R. Doerner, A.A. Haasz, G. Longhurst, S. Luckhardt, D. Mueller, A. Peacock, M. Pick, C.H. Skinner, W. Wampler, K. Wilson, C. Wong, C. Wu and D. Youchison</i> | 445 |
| Studies of tritium desorption from beryllium and characterization of erosion products under plasma-beryllium interaction, <i>D.V. Andreev, A.Y. Biryukov, L.S. Danelyan, N.G. Elistratov, V.M. Gureev, M.I. Guseva, B.N. Kolbasov, Y.Y. Kurochkin, V.N. Nevzorov, O.V. Stativkina and A.M. Zimin</i> | 465 |
| Collection and analysis of particulate from the DIII-D Tokamak, <i>W.J. Carmack, K.A. McCarthy, D.A. Petti, A.G. Kellman and C.P.C. Wong</i> | 477 |
| Gas desorption properties of low-activation ferritic steel as a blanket or a vacuum vessel material, <i>Y. Hirohata, K. Suzuki and T. Hino</i> | 485 |
| Internal stress control of boron thin film, <i>N. Satomi, M. Kitamura, T. Sasaki and M. Nishikawa</i> | 493 |
| Development of 316L(N)-IG stainless steel fabrication approaches for ITER divertor and limiter applications, <i>G.W. Wille, K.T. Slattery, D.E. Driemeyer and G.D. Morgan</i> | 499 |
| Diffusion bonding of alumina dispersion-strengthened copper to 316 stainless steel with interlayer metals, <i>H. Nishi, T. Araki and M. Eto</i> | 505 |
| Development of fabrication technologies for the ITER divertor, <i>H. Ise, S. Satoh, S. Yamazaki, M. Akiba, K. Nakamura, S. Suzuki and M. Araki</i> | 513 |
| Thermal fatigue testing of an ITER primary wall small scale mock up, <i>P. Lorenzetto, G. Le Marois, F. Saint-Antonin, M. Roedig, R. Duwe, W. Daenner, A. Cardella and A. Lodato</i> | 521 |
| Mechanical behavior on residual stress in a tungsten-copper duplex structure after cyclic heat loads for a divertor application, <i>K. Kitamura, K. Ohsemochi, K. Nagata, J. Ohmori, M. Shibui and M. Seki</i> | 529 |
| Thermal fatigue tests on CVD-W/Cu divertor mock-ups, <i>J. Boscary, S. Suzuki, K. Nakamura, T. Suzuki and M. Akiba</i> | 537 |
| Comparative thermal cyclic testing and strength investigation of different Be/Cu joints, <i>A. Gervash, R. Giniyatulin, V. Komarov, I. Mazul, N. Litunovsky, A. Ganenko, A. Vainerman, V. Fedotov, D. Davydov and R. Zalavutdinov</i> | 543 |
| Thermal fatigue tests with actively cooled divertor mock-ups for ITER, <i>M. Rödiger, R. Duwe, C. Ibbott, D. Jacobson, G. Le Marois, A. Lind, J. Linke, P. Lorenzetto, A. Peacock, L. Plöchl, A. Schuster, Y. Severi, G. Vieider, E. Visca and B. Wiechers</i> | 551 |
| ITER baffle module small-scale mock-ups: First Wall thermo-mechanical testing results, <i>Y. Severi, P. Chappuis, L. Giancarli, G. Le Marois, Y. Poitevin, M. Rödiger, J.F. Salavy and G. Vieider</i> | 559 |
| Crack propagation in first wall of fusion reactor by cyclic thermal stress, <i>S. Kimura, H. Kogawa, T. Teramoto and M. Saito</i> | 569 |
| Lifetime and thermal-structural performance of various first wall concepts and implications of creep-fatigue for design and licensing, <i>P.J. Karditsas</i> | 575 |

III. Blanket Technology

- ITER first wall/shield blanket, *K. Ioki, P. Barabaschi, L. Bruno, A. Cardella, W. Danner, F. Elio, M. Hechler, T. Kodama, A. Lodato, D. Loesser, D. Lousteau, R. Mattas, N. Miki, K. Mohri, R. Parker, R. Raffray, Y. Strebkov, N. Tachikawa, H. Takatsu, D. Williamson and M. Yamada* 585
- ITER radiation shielding and neutronics analysis, *R.T. Santoro, H. Iida, V. Khripunov, M. Sawan and T. Inoue* 593
- ITER breeding blanket design for the enhanced performance phase, *Y. Gohar, M. Billone, I. Danilov, W. Dänner, M. Ferrari, K. Ioki, T. Kuroda, D. Loesser, S. Majumdar, R. Mattas, K. Mohri, R. Parker, Y. Strebkov and H. Takatsu* 601
- Development of first wall/blanket structure by hot isostatic pressing (HIP) in the JAERI, *S. Sato, T. Kuroda, T. Hatano, K. Furuya, I. Tokami and H. Takatsu* 609
- Tritium inventory estimation in solid blanket system, *M. Nishikawa, A. Baba, S. Odoi and Y. Kawamura* 615
- Molten salts in fusion nuclear technology, *H. Moriyama, A. Sagara, S. Tanaka, R.W. Moir and D.K. Sze* 627
- Development of the EU water-cooled Pb-17Li blanket, *L. Giancarli, G. Benamati, M. Fütterer, G. Marbach, C. Nardi and J. Reimann* 639
- Development of ceramic breeder blankets in Japan, *H. Takatsu, H. Kawamura and S. Tanaka* 645
- Analysis of thermomechanical interactions and properties of ceramic breeder blankets, *A. Ying and M. Abdou* 651
- Results of R&D for lithium/vanadium breeding blanket design, *R.F. Mattas, D.L. Smith, C.B. Reed, J.H. Park, I.R. Kirillov, Y.S. Strebkov, A.E. Rusanov and S.N. Votinov* 659
- Liquid lithium self-cooled breeding blanket design for ITER, *I.R. Kirillov, I.V. Danilov, S.I. Sidorenkov, Y.S. Strebkov, R.F. Mattas, Y. Gohar, T.Q. Hua and D.L. Smith* 669
- Tritium release kinetics of lithium silicates with irradiation defects, *K. Moritani, T. Magari and H. Moriyama* 675
- Influence of radiation defects on tritium release parameters from Li_2O , *V. Grishmanov, S. Tanaka, J. Tiliks, G. Kizane, A. Supe and T. Yoneoka* 685
- Thermoluminescence study of irradiated lithium orthosilicate, *A. Abramenkovs, E. Kaschejva, V. Grishmanovs and S. Tanaka* 693
- Study on the surface nonstoichiometry of solid breeder blanket materials by means of work function measurement, *A. Suzuki, K. Yamaguchi and M. Yamawaki* 699
- Tritium desorption study from Li_2O by ab initio calculation, *M. Taniguchi and S. Tanaka* 707
- Isotope exchange reaction in Li_2ZrO_3 packed bed, *Y. Kawamura, M. Enoeda and K. Okuno* 713
- Helium release from neutron-irradiated Li_2O sintered pellets, *T. Tanifuji, D. Yamaki and K. Noda* 723
- Trial fabrication of tritium breeders for fusion blanket with lithium recovered from seawater, *K. Tsuchiya and H. Kawamura* 731
- Review of properties of lithium metatitanate, *P. Gierszewski* 739
- First results of the investigation of Li_2ZrO_3 and Li_2TiO_3 pebbles, *J.-D. Lulewicz and N. Roux* 745

| | |
|--|-----|
| Analysis of performance data from ceramic breeder irradiation experiments, <i>J.G. van der Laan and R. Conrad</i> | 751 |
| Mechanical behavior and design database of packed beds for blanket designs, <i>A.Y. Ying, Z. Lu and M.A. Abdou</i> | 759 |
| Fabrication of an ITER middle-scaled shielding blanket module mock-up, <i>S. Sato, T. Osaki, H. Yamada, T. Kobayashi, S. Sato, K. Furuya, T. Hatano, I. Tokami, T. Kuroda and H. Takatsu</i> | 765 |
| Blanket diagnostics system for ITER, <i>A. Epinatiev, A. Razmerov, V. Prozorov and V. Ovchinnikov</i> | 775 |
| In-situ HT release behavior from molten Li_2BeF_4 salt, <i>A. Suzuki, T. Terai and S. Tanaka</i> | 781 |
| Hydrogen extraction from Pb-17Li: Tests with a packed column, <i>N. Alpy, T. Dufrenoy and A. Terlain</i> | 787 |
| MHD effects caused by insulator coating imperfections, <i>X. Zengyu, P. Chuanjie, J. Weihong, W. Wenhao, L. Wenzhong and Q. Jiapu</i> | 793 |
| Heat transfer of lithium single-phase flow and helium-lithium two-phase flow in a circular channel under transverse magnetic field, <i>M. Takahashi, N. Umeda, M. Matsuzaki, A. Inoue and M. Aritomi</i> | 799 |
| Compatibility of insulating ceramic materials with liquid breeders, <i>T. Mitsuyama, T. Terai, T. Yoneoka and S. Tanaka</i> | 811 |
| Development of manufacturing processes for the ITER helium-cooled pebble bed blanket test module, <i>T. Heider, K. Schleisiek, G. Reimann, C. Dellis and E. Rigal</i> | 819 |
| European helium cooled pebble bed blanket. Design of blanket module to be tested in ITER, <i>M. Dalle Donne, H. Albrecht, L.V. Boccaccini, U. Fischer, S. Gordeev, E. Hutter, K. Kleefeldt, P. Norajitra, G. Reimann, P. Ruatto, K. Schleisiek and H. Schnauder</i> | 825 |
| Three-dimensional neutronics analysis of the European HCPB blanket test module in ITER, <i>U. Fischer and M. Dalle Donne</i> | 835 |
| Comprehensive structural analysis of the HCPB DEMO blanket under thermal, mechanical, electromagnetic and radiation induced loads, <i>L.V. Boccaccini, P. Norajitra, P. Ruatto and F. Scaffidi-Argentina</i> | 843 |
| Design development and manufacturing sequence of the European water-cooled Pb-17Li test blanket module, <i>M.A. Fütterer, B. Bielak, J.P. Deffain, C. Dellis, L. Giancarli, A. Li Puma, C. Nardi, J.F. Salavy, K. Schleisiek and J. Szczepanski</i> | 851 |
| Tritium processing system for the ITER Li/V Blanket Test Module, <i>D.-K. Sze, T.Q. Hua, M.A. Dagher, L.M. Waganer and M.A. Abdou</i> | 859 |

IV. Fuel Cycle and Tritium Processing

| | |
|---|-----|
| The recycling and handling of tritium and beryllium at JET, <i>A.C. Bell</i> | 865 |
| Status of the ITER Tritium Plant design, <i>H. Yoshida, O. Kveton, J. Koonce, D. Holland and R. Haange</i> | 875 |
| ITER fuelling, pumping, wall conditioning systems and fuel dynamics analysis, <i>H. Nakamura, P. Ladd, G. Federici, G. Janeschitz, K.M. Schaubel, M. Sugihara, A. Busigin, P.J. Gierszewski, S. Hiroki, H.S. Hurzmeier, W. Kuan, R.A. Marrs, R.R. Parker, D. Post and EU/JA/RF/US Home Teams</i> | 883 |

| | |
|--|------|
| Design of a catalytic exhaust clean-up unit for ITER, <i>M. Glugla, D.K. Murdoch, H. Geißler, P. Herrmann, R. Kraemer and T.L. Le</i> | 893 |
| Effective tritium processing using polyimide films, <i>T. Hayashi, K. Okuno, T. Ishida, M. Yamada and T. Suzuki</i> | 901 |
| CFTSIM-ITER dynamic fuel cycle model, <i>A. Busigin and P. Gierszewski</i> | 909 |
| Erosion effects on tritium permeation and inventory in ITER divertor, <i>W.M. Shu and K. Watanabe</i> | 915 |
| Estimation of permeation probability in plasma driven permeation, <i>M. Takizawa, K. Kiuchi, H. Ishizuka, M. Okamoto and Y. Fujii</i> | 923 |
| Tritium assay in materials by the bremsstrahlung counting method, <i>M. Matsuyama, K. Watanabe and K. Hasegawa</i> | 929 |
| Experimental and computational determination of deuterium–tritium mixtures with a small volume ionization chamber, <i>K. Munakata, U. Berndt, E. Kirste, M. Nishikawa and R.-D. Penzhorn</i> | 937 |
| ITER primary cryopump test facility, <i>N. Petersohn, J.C. Boissin, D. Murdoch and A. Mack</i> | 949 |
| Investigation into the pumping characteristics of ITER cryopumps, <i>C. Day and A. Mack</i> | 955 |
| Component tests on fast heating and cooling with cryopanel for use in the ITER primary vacuum system, <i>H. Haas, C. Day and A. Mack</i> | 963 |
| Experimental investigation of tritium effect on cryosorption panel mock-ups for ITER vacuum pumps, <i>A.I. Vedeneev, M.V. Glagolev, N.T. Kazakovsky, E.L. Koira, I.L. Malkov, V.N. Lobanov, A.V. Sten'gach, I.N. Moreva, G.L. Saksagansky and D.V. Serebrennikov</i> | 971 |
| Compact toroid fuelling for ITER, <i>R. Raman and P. Gierszewski</i> | 977 |
| Routine operation of the gas chromatographic isotope separation system of the Tritium Laboratory Karlsruhe, <i>G. Neffe, U. Besserer, J. Dehne, E. Hutter, H. Kissel, R.D. Penzhorn, J. Wendel and H. Brunnader</i> | 987 |
| Hydrogen isotope separation with palladium particle bed, <i>S. Fukada and M. Nishikawa</i> | 995 |
| Hydrogen isotope separation by gas chromatography using Pd–Pt alloy, <i>K. Watanabe, M. Matsuyama, T. Kobayashi and W.M. Shu</i> | 1001 |
| Effect of development speed on separative performance of displacement chromatography using porous ion exchange resin for Li isotope separation, <i>H. Araki, M. Umeda, Y. Enokida and I. Yamamoto</i> | 1009 |
| Effect of gravity and intermolecular potential on ^3He – ^4He separative performances of 'cryogenic-wall' thermal diffusion column, <i>H. Yamakawa, A. Segi, N. Kobayashi, T. Matsunaga, Y. Enokida and I. Yamamoto</i> | 1015 |
| Experimental study of separative characteristics of cryogenic-wall thermal diffusion column for H–D and H–T mixtures, <i>T. Arita, T. Yamanishi, K. Okuno and I. Yamamoto</i> | 1021 |
| Channeling Stage Model for separative analysis of packed water distillation column, <i>T. Sugiyama, H. Kamewaka, Y. Enokida and I. Yamamoto</i> | 1027 |
| Development of electrolytic reactor for processing of gaseous tritiated compounds, <i>S. Konishi, T. Maruyama, K. Okuno, M. Inoue and A. Yamashita</i> | 1033 |
| Tritium recovery from tritiated water with a two-stage palladium membrane reactor, <i>S.A. Birdsell and R.S. Willms</i> | 1041 |
| Surface modification of Zr-based alloys applicable for tritium processing, <i>K. Ashida, K. Watanabe, S. Ikeno and K. Mori</i> | 1049 |

| | |
|---|------|
| Decomposition of methane on Zr–Ni alloys, <i>K. Watanabe, W.M. Shu, E. Motohashi and M. Matsuyama</i> | 1055 |
| Author index of Parts A, B and C | 1061 |

CONTENTS OF PART B

V. Material Engineering for Fusion Nuclear Technology

| | |
|---|-----|
| The development of ferritic steels for DEMO blanket, <i>A. Kohyama, A. Hishinuma, Y. Kohno, K. Shiba and A. Sagara</i> | 1 |
| Progress in vanadium alloy development for fusion applications, <i>D.L. Smith, H.M. Chung, H. Matsui and A.F. Rowcliffe</i> | 7 |
| Recent advances in the development of SiC/SiC as a fusion structural material, <i>R.H. Jones, L.L. Snead, A. Kohyama and P. Fenici</i> | 15 |
| Treatment of irradiation effects in structural design criteria for fusion reactors, <i>S. Majumdar and P. Smith</i> | 25 |
| Ceramic breeder material development, <i>N. Roux, S. Tanaka, C. Johnson and R. Verrall</i> | 31 |
| New insights into the temperature effects on neutron irradiation of structural materials, <i>T. Muroga and N. Sekimura</i> | 39 |
| High flux dependence of erosion and retention in beam experiments and its significance to fusion systems, <i>M. Nishikawa</i> | 47 |
| Detailed study of radiation enhanced sublimation of graphite under high flux beam irradiation, <i>Y. Ueda, K. Shiota, Y. Kitamura, Y. Ohtsuka, M. Isobe and M. Nishikawa</i> | 55 |
| Beryllium–copper reactivity in an ITER joining environment, <i>B.C. Odegard Jr., C.H. Cadden and N.Y.C. Yang</i> | 63 |
| An experimental study on the potential energy diagram for hydrogen isotopes on copper surfaces, <i>I. Takagi, H. Hashimoto, H. Fujita and K. Higashi</i> | 73 |
| Radiation damage studies on Ni implanted with high energy He and D ions, <i>B. Constantinescu, F. Vasiliu and G. Alexandru</i> | 79 |
| Experimental evaluation of micromechanical damage produced by hydrogen in 316L steel for the first wall of fusion reactors, <i>J. Toribio</i> | 85 |
| An integrated approach to the modelling of hydrogen assisted failure in 316L steel, <i>J. Toribio, R. Cortés, L. Caballero and A. Valiente</i> | 91 |
| The influence of low-temperature neutron irradiation on physicomechanical properties of new reactor alloys saturated with tritium, <i>V.V. Sagaradze, V.L. Arbuzov, B.N. Goshchitskii, V.D. Parkhomenko, Y.N. Zouev and V.V. Andryushin</i> | 97 |
| Plasma driven tritium uptake and leakage through plasma facing materials, <i>A.A. Pisarev, O.V. Ogorodnikova and M.O. Titkov</i> | 103 |
| Helium embrittlement of Ti and P added austenitic alloys crept at 923 K, <i>N. Yamamoto, J. Nagakawa, Y. Murase and H. Shiraishi</i> | 111 |
| Tritium barrier development for austenitic stainless steel by its aluminizing in a lithium melt, <i>B.A. Kalin, V.L. Yakushin and E.P. Fomina</i> | 119 |
| Hydrogen penetration through structural materials during hydrogen ion bombardment, <i>A.G. Zaluzhnyi, V.P. Kopytin and M.V. Tcherednichenko-Alchevskiy</i> | 129 |
