

## CONTENTS OF PART B

### V. Material Engineering for Fusion Nuclear Technology

The development of ferritic steels for DEMO blanket, <i>A. Kohyama, A. Hishinuma, Y. Kohno, K. Shiba and A. Sagara</i>	1
Progress in vanadium alloy development for fusion applications, <i>D.L. Smith, H.M. Chung, H. Matsui and A.F. Rowcliffe</i>	7
Recent advances in the development of SiC/SiC as a fusion structural material, <i>R.H. Jones, L.L. Snead, A. Kohyama and P. Fenici</i>	15
Treatment of irradiation effects in structural design criteria for fusion reactors, <i>S. Majumdar and P. Smith</i>	25
Ceramic breeder material development, <i>N. Roux, S. Tanaka, C. Johnson and R. Verrall</i>	31
New insights into the temperature effects on neutron irradiation of structural materials, <i>T. Muroga and N. Sekimura</i>	39
High flux dependence of erosion and retention in beam experiments and its significance to fusion systems, <i>M. Nishikawa</i>	47
Detailed study of radiation enhanced sublimation of graphite under high flux beam irradiation, <i>Y. Ueda, K. Shiota, Y. Kitamura, Y. Ohtsuka, M. Isobe and M. Nishikawa</i>	55
Beryllium–copper reactivity in an ITER joining environment, <i>B.C. Odegard Jr., C.H. Cadden and N.Y.C. Yang</i>	63
An experimental study on the potential energy diagram for hydrogen isotopes on copper surfaces, <i>I. Takagi, H. Hashimoto, H. Fujita and K. Higashi</i>	73
Radiation damage studies on Ni implanted with high energy He and D ions, <i>B. Constantinescu, F. Vasiliu and G. Alexandru</i>	79
Experimental evaluation of micromechanical damage produced by hydrogen in 316L steel for the first wall of fusion reactors, <i>J. Toribio</i>	85
An integrated approach to the modelling of hydrogen assisted failure in 316L steel, <i>J. Toribio, R. Cortés, L. Caballero and A. Valiente</i>	91
The influence of low-temperature neutron irradiation on physicomechanical properties of new reactor alloys saturated with tritium, <i>V.V. Sagaradze, V.L. Arbutov, B.N. Goshchitskii, V.D. Parkhomenko, Y.N. Zouev and V.V. Andryushin</i>	97
Plasma driven tritium uptake and leakage through plasma facing materials, <i>A.A. Pisarev, O.V. Ogorodnikova and M.O. Titkov</i>	103
Helium embrittlement of Ti and P added austenitic alloys crept at 923 K, <i>N. Yamamoto, J. Nagakawa, Y. Murase and H. Shiraishi</i>	111
Tritium barrier development for austenitic stainless steel by its aluminizing in a lithium melt, <i>B.A. Kalin, V.L. Yakushin and E.P. Fomina</i>	119
Hydrogen penetration through structural materials during hydrogen ion bombardment, <i>A.G. Zaluzhnyi, V.P. Kopytin and M.V. Tcherednichenko-Alchevskiy</i>	129
