ABSTRACT
EXECUTIVE SUMMARY
1 INTRODUCTION
1.1Aim of the report211.2Relation with other ICRU reports221.3From prescribing to recording and reporting221.3.1Treatment prescription221.3.2Recording the radiation treatment221.3.3Reporting the treatment231.4The three levels of dose and volume evaluation for reporting231.4.1Level 1231.4.2Level 2231.4.3Level 3231.4.4Level 3231.5Reporting doses in a series of patients241.6Clinical examples24
2 VOLUMES
2.1Introduction252.2Gross Tumor Volume (GTV)252.3Clinical Target Volume (CTV)252.3.1The concept of CTV252.3.2Treatment of subclinical extensions surrounding a GTV272.3.3Treatment of subclinical extensions at a distance from a GTV282.3.4Reporting the CTV282.3.5The CTV and GTV: oncological concepts28
2.4 Planning Target Volume (PTV)

PRESCRIBING, RECORDING, AND REPORTING ELECTRON BEAM THERAPY

		2.4.2 Margins for the different types of variations and uncertainties	28
		2.4.2.1 Internal Margin (IM)	28
		2422 Set. un Margin (SM)	30
		2.4.3.2.2 Delineating the PTV	30
	2.5	Treated Volume	20
	2.0	951 Definition	20
		2.5.1 Definition	04 09
	.		30 00
	2.6		33
	2.7	Organs at Risk (OARs)	33
	2.8	Planning Organ at Risk Volume (PRV)	34
	2.9	Reference Points and coordinate systems	34
		2.9.1 Reference Points	34
		2.9.2 Coordinate systems	34
		$2.9.2.1$ The patient coordinate system "p" $\ldots \ldots \ldots$	35
		2.9.2.2 Coordinate systems related to the treatment machine ("t")	
		and the imaging units ("i")	35
	2.10	Recommendations for recording and reporting volumes	36
		2.10.1 Summary of the recommendations	36
		2.10.2 Graphics	36
3	PHYSICAL	CHARACTERISTICS OF ELECTRON BEAMS	39
	3.1	Introduction	39
	3.2	Electron energy	39
	3.3	Practical range, R.	39
	34	Therapeutic range	41
	25	Y-ray background	19
	0.0 2.6	Doso gradient	49
	3.0 9.7	Obligue hear incidence	42
	0.1 2 Q		40
	9.0 9.0	Effects of hotomorphisms	44
	5.7 910	Developments in electron beem thereasy	44
	9.10	2 10 1 Querrier	40
			40
			40
		3.10.3 Collimation	40
		3.10.4 Three-dimensional dose computation and treatment planning	47
4	GENERAL	RECOMMENDATIONS FOR PRESCRIBING, RECORDING, AND	10
	REPORTIN	G EXTERNAL-BEAM THERAPY	49
	4.1	From prescribing to recording and reporting	49
		4.1.1 Prescribing the treatment	49
		4.1.1.1 Approach based on central Reference Point	49
		4.1.1.2 Approach based on specification of a dose range within the PTV	49
		4.1.1.3 Approach based on minimum dose to the PTV	49
		4.1.2 Reporting the treatment	50
		4.1.3 Recording the treatment parameters	50
	4.2	The three levels of dose and volume evaluation for reporting	50
		4.2.1 Level 1	50
		4.2.2 Level 2	50
		4.2.3 Level 3	50
	4.3	General recommendations for reporting electron beam therapy	51
		4.3.1 Principles	51
		4.3.2 The ICRU reference point	51
		4.3.3 Reporting dose distributions in the CTV and PTV	51
			- 0.3

CONTENTS

		4.3.3.1 Dose homogeneity required in the PTV514.3.3.2 Reporting dose distribution at Levels 1, 2, and 3514.3.3.3 Evaluation of PTV 95 (PTV 90) for reporting524.3.4 Dose (and dose distribution) to the Organs at Risk524.3.5 Doses at Reference Points, dose distributions in volumes, and52
		developments related to dose-volume histograms 52 4.3.5.1 Doses at Reference Points 52 4.3.5.2 Dose distributions in volumes 52
		4.3.5.3 Developments related to $DVHs$
	4.4	Reporting a series of patients
		$4.4.1 Introduction \dots 53$
		4.4.2 Reporting prescription of treatment (protocol)
		4.4.3 Description of actual treatment in a series of patients
5	RECOMMI THERAPY	ENDATIONS FOR REPORTING DOSES IN ELECTRON BEAM FOR DIFFERENT CLINICAL SITUATIONS
	5.1	Introduction
	5.2	Reporting doses for a single electron beam
		5.2.1 Reference conditions 57
		5.2.1.1 Reporting at Level 1
		5.2.1.2 Reporting at Level 2 or 3
		5.2.2 Small and irregularly shaped beams
		5.2.2.1 Reporting at Level 1
		5.2.2.2 Reporting at Level 2 or 3
		5.2.3 Extended SSD-air gaps 59
		$5.2.3.1$ Reporting at Level 1 \ldots 59
		5.2.3.2 Reporting at Level 2 or 3
		5.2.4 Oblique electron beam incidence
		$5.2.4.1$ Reporting at Level 1 \ldots 60
		5.2.4.2 Reporting at Level 2 or $3 \ldots 61$
		$5.2.5$ Heterogeneities \ldots 62
		$5.2.5.1$ Reporting at Level 1 \ldots 63
		5.2.5.2 Reporting at Level 2 or $3 \ldots 63$
		5.2.6 Bolus
	5.3	Combination of electron and photon beams
		5.3.1 One high-energy photon beam and one electron beam (coaxial beams,
		same field size)
		5.3.2 Adjacent electron and photon beams
	5.4	Combinations of electron beams
		5.4.1 Adjacent-parallel electron beams
		5.4.2 Parallel-opposed electron beams
	5.5	Electron-beam arc therapy
6	SPECIAL 7	TECHNIQUES
	6.1	Intra-operative radiation therapy (IORT) 69
		6.1.1 Introduction
		6.1.2 Beam requirements
		6.1.3 Recommendations for reporting
		6.1.3.1 Treatment technique 70
		6.1.3.2 The ICRU Reference Point
		6.1.3.3 Reporting of dose
	6.2.	Total skin irradiation (TSI)
		6.2.1 Introduction
