

# Contents

<b>Introduction</b>	<b>1</b>
<b>1. Basic plasma characteristics</b>	
1.1 The electron plasma frequency	5
1.2 The Debye length	8
1.3 Electrostatic plasma waves	11
1.4 Binary Coulomb collisions	14
<b>2. Motion of an electron in a magnetic field</b>	
2.1 Electron motion in a constant uniform magnetic field	19
2.2 Guiding-centre drift due to non-magnetic forces	22
2.3 Guiding-centre drift due to magnetic forces	24
2.4 Curvature drift	28
2.5 Particle trapping	30
<b>3. Dielectric description of cold plasma</b>	
3.1 Introduction to the dielectric description of plasma	35
3.2 Dielectric tensor of a cold magnetized plasma	37
3.3 High-frequency waves in a cold magnetized plasma	39
3.4 Low-frequency waves in a cold magnetized plasma	48
<b>4. Magnetohydrodynamic description of plasma</b>	
4.1 Introduction to magnetohydrodynamics	57
4.2 Force and motion in ideal magnetohydrodynamics	64
4.3 Magnetohydrodynamic waves	70
4.4 Magnetohydrodynamic energy	75
<b>5. Kinetic description of plasma</b>	
5.1 Introduction to kinetic theory	84
5.2 Kinetic theory of unmagnetized plasma	88
5.3 Landau damping	93
5.4 The Fokker–Planck equation and binary Coulomb collisions	100
5.5 Two-stream instability and negative energy waves	113

<b>6. Non-linear plasma physics</b>	
6.1 Two-fluid theory and the Zakharov equations	124
6.2 The turbulence parameter and modulational instability	133
6.3 Non-linear wave coupling	139
<b>Solutions to exercises</b>	147
<b>Index</b>	159
