	Preface	v
	Introduction	xvii
1	General Dispersion Relation for a Collisionless Inhomogeneous Plasma	1
1.1	General form of the dispersion relation	3
1.1.1	<i>The dispersion relation for a homogeneous plasma</i>	3
1.1.2	<i>Potentials of the perturbed field</i>	4
1.1.3	<i>Electrodynamic equations in terms of ϕ, A_2, A_3</i>	5
1.1.4	<i>General form of the dispersion relation for an inhomogeneous plasma</i>	6
1.2	Equilibrium	8
1.2.1	<i>Constants of motion</i>	8
1.2.2	<i>Equilibrium distribution function</i>	9
1.2.3	<i>Equation of transverse equilibrium</i>	10
1.2.4	<i>Equilibrium trajectories</i>	11
1.3	Perturbed distribution function	12
1.4	Permittivity of an inhomogeneous plasma	14
2	Simplified Dispersion Relations	16
2.1	Permittivity and dispersion relations for low-frequency long-wavelength perturbations	17
2.1.1	<i>Permittivity for long-wavelength low-frequency perturbations</i>	18
2.1.2	<i>Splitting of the general dispersion relation in the approximation $k_\perp \rho \rightarrow 0$</i>	19
2.1.3	<i>Dispersion relations for low-frequency long-wavelength perturbations with $k_z = 0$</i>	20
2.1.4	<i>Permittivity of a force-free plasma</i>	22
2.1.5	<i>Permittivity of a plasma flow with an inhomogeneous velocity profile</i>	23
		vii

2.1.6	<i>Allowance for the interaction of Alfvén perturbations with resonant particles</i>	24
2.2	Dispersion relations for short-wavelength perturbations with $k_z = 0$	25
2.2.1	<i>Perturbations with $\mathbf{E} \perp \mathbf{B}_0$</i>	26
2.2.2	<i>Perturbations with $\mathbf{E} \parallel \mathbf{B}_0$</i>	30
2.3	Oblique short-wavelength perturbations	31
2.3.1	<i>Low-frequency perturbations</i>	31
2.3.2	<i>Perturbations with $\omega \simeq \Omega_i$</i>	32
2.4	Electromagnetic perturbations in a low- β plasma	33
3	Inertialess Magneto-drift Instabilities in a Collisionless Finite-β Plasma	35
3.1	Tserkovnikov's magneto-drift instabilities	38
3.2	Transverse drift waves	40
3.3	Instabilities with finite k_z	42
3.3.1	<i>Electron drift wave branch</i>	43
3.3.2	<i>Magneto-drift oscillation branch</i>	45
3.3.3	<i>Influence of finite β on the ion temperature-gradient drift instability</i>	48
3.3.4	<i>Suppression of the ion temperature-gradient drift instability in a plasma with $\beta \gg 1$</i>	49
3.4	Instabilities with large k_z	47
3.4.1	<i>Influence of finite β on the ion temperature-gradient drift instability</i>	48
3.4.2	<i>Suppression of the ion temperature-gradient drift instability in a plasma with $\beta \gg 1$</i>	49
3.5	Systematization of the results	51
4	Alfvén Magneto-drift Instabilities in a Finite-β Plasma	53
4.1	Alfvén perturbation branches for finite β and $k_\perp \rho_i \rightarrow 0$	55
4.1.1	<i>Perturbations with $k_z = 0$</i>	55
4.1.2	<i>Perturbations with $k_z \neq 0$</i>	56
4.2	Interactions of drift-Alfvén waves with resonant particles for $k_z = 0$	57
4.2.1	<i>Resonant interaction of the waves with electrons</i>	57
4.2.2	<i>Resonant interaction of waves with ions</i>	58
4.2.3	<i>The zeroth approximation in the parameters $\omega/k_z v_{Te}$ and $k_z v_{Ti}/\omega$</i>	59
4.3	Role of resonant particles in Alfvén perturbations with $k_z v_{Ti} \ll \omega \ll k_z v_{Te}$	59
4.3.1	<i>The zeroth approximation in the parameters $\omega/k_z v_{Te}$ and $k_z v_{Ti}/\omega$</i>	59

4.3.2	<i>Interaction of waves with resonant electrons</i>	60
4.3.3	<i>Ion resonance of the type $\omega = k_z v_z + \omega_{di}$ for $\omega/\omega_{di} < 0$</i>	61
4.4	<i>Role of resonant particles in Alfvén perturbations with $\omega \simeq k_z v_{Ti}$ for $\nabla T = 0$</i>	63
4.5	<i>Correspondence between Alfvén perturbations and the flute instability in finite-β plasma</i>	65
5	Low-frequency Instabilities in a Two-energy Component Plasma	67
5.1	<i>Gradient excitation of the fast magnetoacoustic waves by high-energy particles</i>	71
5.2	<i>Drift-mirror instability</i>	72
5.3	<i>Gradient excitation of Alfvén waves by high-energy particles</i>	75
5.3.1	<i>Instability of long-wavelength Alfvén perturbations</i>	76
5.3.2	<i>Instability of the short-wavelength Alfvén perturbations</i>	77
6	Electromagnetic Instabilities in a Strongly Inhomogeneous Plasma	80
6.1	<i>Short-wavelength perturbations in a finite-β Maxwellian plasma</i>	84
6.1.1	<i>The $k_\perp \rho_e \rightarrow 0$ approximation</i>	85
6.1.2	<i>Electron damping of the ion-drift oscillation branch</i>	86
6.1.3	<i>Plasma with cold electrons</i>	88
6.2	<i>Drift-cyclotron instability in a finite-β plasma</i>	88
6.2.1	<i>Electrostatic magneto-drift drift-cyclotron instability</i>	90
6.2.2	<i>Electromagnetic drift-cyclotron instability</i>	91
6.3	<i>Electromagnetic lower-hybrid-drift (high-frequency drift) instability in a finite-β plasma</i>	93
6.3.1	<i>Cold-electron plasma</i>	94
6.3.2	<i>Plasma with finite electron temperature</i>	94
6.4	<i>Drift loss-cone instability in a finite-β plasma</i>	94
6.4.1	<i>Cold-electron plasma</i>	95
6.4.2	<i>Hot-electron plasma</i>	96
6.4.3	<i>Stabilization by a warm plasma</i>	97
6.5	<i>Ion-cyclotron excitation of transverse drift waves</i>	98
6.5.1	<i>Ion-cyclotron instability of hydrodynamic type</i>	99
6.5.2	<i>Kinetic magneto-drift ion-cyclotron instability</i>	99
6.6	<i>Short-wavelength drift-Alfvén (SDA) perturbations in a finite-β plasma</i>	100
6.6.1	<i>Oscillation branches</i>	100
6.6.2	<i>Hydrodynamic treatment of the SDA perturbations</i>	101
6.6.3	<i>Interaction of the SDA perturbations with resonant electrons</i>	101

x	<i>Electromagnetic Instabilities in an Inhomogeneous Plasma</i>	
6.7	Ion-cyclotron instability of the SDA perturbations	102
7	Description of Perturbations in a Plasma with Transverse Current	104
7.1	Electron equilibrium	105
7.2	Ion equilibrium	108
7.2.1	<i>Ion distribution just after applying an alternating electromagnetic field to a plasma</i>	108
7.2.2	<i>Distribution of partially relaxing ions</i>	108
7.2.3	<i>Ions in a rotating plasma</i>	109
7.3	Magnetic-field gradient	109
7.4	Equilibria previously discussed in the literature	110
7.5	Modification of the permittivity tensor	112
7.5.1	<i>General remarks</i>	112
7.5.2	<i>The high-frequency approximation for $\epsilon_{00}^{(i)}$</i>	113
7.6	Dispersion relation for electrostatic perturbations	114
7.6.1	<i>The low-frequency approximation, with respect to electrons, for $\beta \ll 1$</i>	115
7.6.2	<i>Short-wavelength perturbations, with respect to electrons, near the electron-cyclotron harmonics</i>	116
7.6.3	<i>The high-frequency approximation for hot electrons</i>	116
7.6.4	<i>The high-frequency approximation for cold electrons</i>	117
7.7	Description of electromagnetic small-scale perturbations of low-frequency, with respect to electrons	117
7.7.1	<i>General expressions for $\epsilon_{\alpha\beta}(\alpha, \beta = 1, 2, 3)$</i>	117
7.7.2	<i>Description of perturbations with $k_z = 0$</i>	118
7.7.3	<i>Description of perturbations in a plasma with cold electrons</i>	119
7.7.4	<i>Dispersion relation for perturbations with $k_{\perp}\rho_e \ll 1$ and $\omega \ll k_z v_{Te}$ in a plasma with finite electron temperature</i>	120
7.8	Starting equations for large-scale perturbations	121
8	Transverse-current-driven Instabilities	124
8.1	Electromagnetic modified two-stream instability	126
8.2	Electromagnetic current-profile instability	128
8.3	Electromagnetic current-driven lower-hybrid-drift instability	129
8.3.1	<i>Oscillation branch in a cold-electron plasma</i>	129
8.3.2	<i>Instability in a cold-electron plasma</i>	130
8.3.3	<i>Stabilization in a hot-electron plasma with $\beta \gg 1$</i>	130
8.4	Electrostatic and electromagnetic electron-acoustic instabilities	131

8.5	Oblique current-driven instabilities with $k_{\perp}\rho_e < 1$ and $\omega < \Omega_e$	132
8.5.1	<i>Electrostatic perturbations</i>	132
8.5.2	<i>Electromagnetic perturbations with $\omega > k_{\perp}v_{Ti}$</i>	133
8.5.3	<i>Electromagnetic perturbations with $\omega \ll k_{\perp}v_{Ti}$</i>	134
8.5.4	<i>Allowance for the gradient effects</i>	134
8.6	Instabilities with $k_{\perp}\rho_e > 1$	134
8.6.1	<i>Plasma with $\beta \gtrsim 1$</i>	135
8.6.2	<i>Oblique waves in a plasma with $\beta \rightarrow 0$</i>	136
8.6.3	<i>Electron-cyclotron harmonics</i>	136
8.7	Instabilities in a rotating plasma	137
9	Hydrodynamic Description of Collisional Finite-β Plasma Perturbations	139
9.1	Drift hydrodynamics of a finite- β plasma	142
9.2	Multimoment transport equation set	143
9.3	Reducing the multimoment transport equation set by expansion in $1/B$	147
9.4	The simplest hydrodynamic equation set allowing for dissipative effects of order ω/ν_i	149
9.5	Agreement between the moment method and the drift kinetic equation method	151
9.6	Hydrodynamic description of inertial perturbations, neglecting dissipative effects	152
9.7	Allowance for the transverse heat conductivity and transverse viscosity in perturbations with $\partial/\partial z = 0$	155
10	Starting Equations for Basic Types of Hydrodynamic Perturbations	156
10.1	Dispersion relations for perturbations with $k_z = 0$, neglecting dissipative effects	158
10.1.1	<i>Inertialess perturbations</i>	158
10.1.2	<i>Inertial perturbations</i>	160
10.2	Dispersion relations for perturbations with $k_z = 0$ allowing for dissipative effects	161
10.2.1	<i>Effects of order ω/ν_i</i>	161
10.2.2	<i>Effects of order $\nu_i k_{\perp}^2 \rho_i^2 / \omega$</i>	163
10.2.3	<i>Allowance for the heat transfer</i>	164
10.2.4	<i>Dispersion relation for transverse drift waves</i>	165
10.3	Starting equations for oblique perturbations	166
10.3.1	<i>Perturbations with $k_z \simeq (\nu_e \omega)^{1/2} / v_{Te}$</i>	166
10.3.2	<i>Perturbations with $k_z \simeq \omega / v_{Ti}$ in a weakly collisional plasma</i>	167
10.3.3	<i>Perturbations in a high-β plasma with $k_z > \omega / v_{Ti}$</i>	169

10.3.4	<i>Perturbations in a strongly collisional plasma</i>	170
10.4	Dispersion relations for inertialess perturbations in a plasma flow with an inhomogeneous velocity profile	173
10.4.1	<i>Starting equations</i>	173
10.4.2	<i>Inertialess perturbations in a plasma flow with $\nabla n_0 = \nabla T_0 = 0$</i>	174
10.4.3	<i>Allowance for the density gradient</i>	176
10.5	Description of Alfvén perturbations in a plasma flow with an inhomogeneous velocity profile	177
10.5.1	<i>Alfvén perturbations when neglecting drift effects</i>	177
10.5.2	<i>Magnetic viscosity tensor for $dU/dx \neq 0$, with $\tilde{B}_x \neq 0$</i>	178
10.5.3	<i>Allowance for the drift effects for $\nabla n_0 = \nabla T_0 = 0$</i>	178
10.5.4	<i>Dispersion relation of small-scale Alfvén perturbations for $\nabla n_0 = \nabla T_0 = 0$</i>	179
10.5.5	<i>Dispersion relation of small-scale Alfvén perturbations for $\nabla n_0 \neq 0$, with $\nabla T_0 = 0$</i>	179
11	Instabilities in a Collisional Finite-β Plasma	181
11.1	Magneto-drift entropy instabilities	184
11.1.1	<i>Entropy perturbations when neglecting dissipative effects</i>	184
11.1.2	<i>The role of dissipative effects of order ω/ν_i</i>	185
11.1.3	<i>The role of dissipative effects of order $(k_\perp \rho_i)^2 \nu_i/\omega$</i>	185
11.1.4	<i>The role of the heat transfer</i>	186
11.2	Inertialess instabilities with $k_z \simeq (\nu_e \omega)^{1/2}/v_{Te}$	186
11.2.1	<i>Magneto-drift instability in a plasma with $\nabla T = 0$</i>	187
11.2.2	<i>Instability of electron drift waves in a plasma with $\nabla T \neq 0$</i>	188
11.3	Inertialess instabilities with $k_z \simeq \omega/v_{Ti}$ in a weakly collisional plasma	189
11.4	Inertialess instabilities in a strongly collisional plasma	190
11.5	Inertial instabilities	191
12	Instabilities in Force-free and Almost Force-free High-β Plasmas	192
12.1	Inertialess instabilities in a force-free collisionless high- β plasma	195
12.1.1	<i>Plasma with $T_e = T_i$ and $\beta \rightarrow \infty$</i>	195
12.1.2	<i>Plasma with $T_e \neq T_i$ and $\beta \rightarrow \infty$</i>	196
12.1.3	<i>Instability boundaries for finite β</i>	197
12.2	Inertialess instabilities in an almost force-free collisionless high- β plasma	198
12.2.1	<i>Perturbations with small k_z</i>	198
12.2.2	<i>Perturbations with $v_{Ti} \ll \omega/k_z \ll v_{Te}$</i>	199

<i>12.2.3 Perturbations with $\omega \ll k_z v_{Ti}$</i>	200
12.3 Inertialess instabilities in a weakly collisional plasma	200
<i>12.3.1 Perturbations with $k_z = 0$</i>	200
<i>12.3.2 Perturbations with finite k_z</i>	201
<i>12.3.3 Perturbations with $k_z \gtrsim (\omega \nu_i)^{1/2} / v_{Ti}$</i>	202
12.4 Inertialess instabilities in a strongly collisional plasma	204
12.5 Alfvén instabilities in a high-β plasma	205
<i>12.5.1 Instabilities in a force-free collisionless plasma</i>	207
<i>12.5.2 Kinetic instabilities in a collisionless plasma for $\nabla B \neq 0$</i>	208
<i>12.5.3 Dissipative instabilities in a collisional plasma</i>	209
13 Electromagnetic Kelvin–Helmholtz Instabilities	210
13.1 The ordinary Kelvin–Helmholtz instability	215
<i>13.1.1 Single-fluid approach</i>	216
<i>13.1.2 Electrodynastic approach</i>	217
<i>13.1.3 Resemblance of the ordinary Kelvin–Helmholtz instability to the Alfvén instability in interpenetrating plasmas</i>	217
<i>13.1.4 Correspondence between Kelvin–Helmholtz and Rayleigh–Taylor instabilities</i>	218
13.2 Kinetic theory of the ordinary Kelvin–Helmholtz instability	219
13.3 The large-scale drift-Alfvén Kelvin–Helmholtz instability	220
13.4 The small-scale drift-Alfvén Kelvin–Helmholtz instability	221
<i>13.4.1 Plasma with $\nabla n = \nabla T = 0$</i>	221
<i>13.4.2 The role of the density gradient</i>	222
<i>13.4.3 The role of the temperature gradient</i>	222
<i>13.4.4 Force-free and almost force-free high-β plasma</i>	223
13.5 Drift magnetoacoustic Kelvin–Helmholtz instabilities	223
<i>13.5.1 Perturbations with $v_{Ti} \ll \tilde{\omega} / k_z \ll v_{Te}$</i>	224
<i>13.5.2 Perturbations with $\tilde{\omega} \ll k_z v_{Ti}$</i>	225
<i>13.5.3 The role of the density gradient</i>	226
14 Electromagnetic Drift Instabilities in a Low-β Plasma	228
14.1 Kinetic drift-Alfvén instability in a low-β plasma	230
<i>14.1.1 The simplest results</i>	230
<i>14.1.2 The role of the temperature gradient</i>	232
<i>14.1.3 The role of the ion longitudinal motion</i>	232
<i>14.1.4 Stabilization by a cold electron admixture</i>	233
14.2 Resistive drift-Alfvén instability	234

14.2.1	<i>Starting equations</i>	235
14.2.2	<i>Analysis of the dispersion relation</i>	236
14.3	Use of the model collisional terms for electromagnetic density-gradient instabilities	237
14.3.1	<i>General expression for the perturbed distribution function</i>	237
14.3.2	<i>Electron permittivity</i>	239
14.3.3	<i>Transverse ion permittivity</i>	240
14.3.4	<i>Longitudinal ion permittivity</i>	241
14.3.5	<i>Dispersion relation</i>	241
14.3.6	<i>Long-wavelength drift-Alfven instabilities</i>	243
14.3.7	<i>Electromagnetic short-wavelength resistive drift instability</i>	243
14.4	Suppression of density-gradient instabilities in a finite- β plasma	243
14.4.1	<i>Suppression of the kinetic drift-Alfven instability due to ion Landau damping</i>	243
14.4.2	<i>Suppression of the resistive drift-Alfven instability</i>	246
14.5	Electromagnetic short-wavelength temperature-gradient instabilities	246
14.5.1	<i>Oscillation branches</i>	247
14.5.2	<i>The results of instability analysis</i>	247
14.6	Hydrodynamic drift-Alfven instability in a plasma with $\beta \ll M_e/M_i$	249
15	Allowance for Magnetic-field Curvature Effects	250
15.1	Equilibrium	251
15.1.1	<i>Equilibrium magnetic field</i>	251
15.1.2	<i>Constants of particle motion</i>	252
15.1.3	<i>Transverse equilibrium condition</i>	253
15.1.4	<i>Equilibrium trajectories</i>	254
15.2	Local permittivity	257
15.2.1	<i>Derivation of starting equations for the permittivity</i>	257
15.2.2	<i>The approximation of low-frequency long-wavelength perturbations</i>	260
15.3	Kinetic theory of local hydromagnetic perturbations in a finite- β plasma	261
