

CONTENTS

PREFACE	xv
NOMENCLATURE	xix
1 INTRODUCTION	1
1.1 Historical Development	1
1.2 Principles of Operation	3
1.3 Types of Heat Pipes	9
1.4 Working Fluids and Temperature Ranges	19
1.5 Capillary Wick Designs and Structures	24
1.6 Heat Transfer Limitations	32
1.7 Heat Pipe Startup	35
1.8 Heat Pipe Characteristics	37
1.9 Heat Pipe Applications	41
References	55
2 SOLID-LIQUID-VAPOR PHENOMENA, DRIVING FORCES AND INTERFACIAL HEAT AND MASS TRANSFER	61
2.1 Introduction	61
2.2 Physical Surface Phenomena, Capillary and Disjoining Forces	62
2.2.1 Surface Tension	62
2.2.2 Angle of Contact	63
2.2.3 Capillary Pressure	65
2.2.4 Disjoining Pressure	71
2.3 Change in Saturated Vapor Pressure Over the Liquid Film	72
2.4 Interfacial Resistance in Vaporization and Condensation Processes	73
	vii

2.5	Interfacial Mass, Momentum and Energy Balances	75
2.6	Interfacial Pressure Balance and Maximum Interfacial Pressure Difference	79
2.7	Interfacial Phenomena in Capillary Grooved Structures	81
2.7.1	Formation of and Heat Transfer Through Thin Liquid Films	82
2.7.2	Heat Transfer in the Thin-Film Region of the Evaporator	87
2.7.3	Heat Transfer in the Thin-Film Region of the Condenser	91
2.7.4	Heat Conduction in the Metallic Fin and Meniscus Region Film	93
2.7.5	Numerical Prediction	95
2.8	Heat Transfer in Wavy Thin Liquid Films	105
	References	111
3	STEADY HYDRODYNAMIC AND THERMAL CHARACTERISTICS	115
3.1	Introduction	115
3.2	Thermal Fluid Phenomena in Capillary Media	117
3.2.1	Capillary Wick Structures	117
3.2.2	Liquid flow in Capillary Media	123
3.2.3	Effective Thermal Conductivity of Wick Structures	129
3.3	Vapor Flow Analysis	141
3.3.1	Approximate Analytical Solutions for Incompressible Vapor Flow	145
3.3.2	Compressible One-Dimensional Analysis	161
3.3.3	Two-Dimensional Incompressible Boundary Layer Analysis	165
3.3.4	Two-Dimensional Elliptic Analysis	172
3.4	Thermal Characteristics Including the Effect of the Wall and Vapor Core	173
3.4.1	Localized Heating (Simplified Approximations)	173
3.4.2	Multiple Heat Sources and Sinks (Two-Dimensional Approximation)	183
3.4.3	Block Heating (Three-Dimensional Approximation)	195

3.5	Thermal Characteristics of Axially-Grooved Heat Pipes Including the Liquid Flow and Heat Transfer in Wick Structures	202
	References	216
4	HEAT TRANSFER LIMITATIONS	221
4.1	Introduction	221
4.2	Capillary Limitation	224
4.2.1	Pressure Balance in a Heat Pipe	224
4.2.2	Capillary Limit Expression for Conventional Heat Pipes	226
4.2.3	Capillary Limit Expression for Annular Heat Pipes	228
4.3	Boiling Limitation	232
4.3.1	Boiling Phenomena	232
4.3.2	Boiling Heat Transfer and Vapor Formation Models in Heat Pipe Wicks	238
4.3.3	Experimental Studies of Boiling Heat Transfer from Surfaces Covered by Porous Media	240
4.3.4	Critical Nucleation Superheat and Heat Flux in Porous Wicks	244
4.4	Sonic Limitation	248
4.5	Entrainment Limitation	253
4.6	Viscous Limitation	255
4.7	Condenser Limitation	259
4.8	Continuum Flow Limitation	262
4.9	Frozen Startup Limitation	263
	References	264
5	CONTINUUM TRANSIENT AND FROZEN STARTUP BEHAVIOR OF HEAT PIPES	267
5.1	Introduction	267
5.2	Transient Response to a Sudden Change in Heat Input or Temperature	268
5.2.1	Transient Lumped Model	268
5.2.2	One-Dimensional Transient Continuum Model	274
5.2.3	Two-Dimensional Transient Continuum Model	278
5.3	Frozen Startup and Shutdown of Heat Pipes	295
5.3.1	Experimental Observations	297
5.3.2	Description of High-Temperature Heat Pipe Startup	312

5.3.3	Transition from Free-Molecular to Continuum Flow	312	7.2.2	Vapor Flow Modeling	461
5.3.4	Numerical Model of Frozen Startup of High-Temperature Heat Pipes	314	7.2.3	Complete Two-Dimensional Rotating Heat Pipe Analysis	462
5.3.5	Closed-Form Analytical Model of Frozen Startup of High-Temperature Heat Pipes	326	7.3	Revolving Heat Pipes	472
5.3.6	Frozen-Startup Limitation	333	7.4	Internal Surface Enhancements	478
References		338	7.5	Heat Transport Limitations	485
			7.5.1	Condensation Limit	485
			7.5.2	Entrainment Limit	486
			7.5.3	Boiling Limit	486
6	TWO-PHASE CLOSED THERMOSYPHONS	341	7.6	Applications	488
6.1	Introduction	341	7.7	Concluding Remarks	489
6.2	Reflux Condensation Heat Transfer in Analysis	341	References		490
6.2.1	Extended Laminar Nusselt Theory with Empirically Specified Interfacial Shear Stress	343	8	VARIABLE CONDUCTANCE HEAT PIPES	493
6.2.2	Extended Nusselt Film Condensation by Coupling with Countercurrent Vapor Flow	358	8.1	Introduction	493
6.2.3	Turbulent Film Condensation	361	8.1.1	Gas-Loaded Heat Pipes	494
6.2.4	Review of Empirical Correlations	366	8.1.2	Excess-Liquid Heat Pipes	495
6.3	Evaporation Heat Transfer Analysis	376	8.1.3	Vapor-Flow Modulated Heat Pipes	496
6.4	Heat Transfer Limit	385	8.1.4	Liquid-Flow Modulated Heat Pipes (Thermal Diodes)	496
6.4.1	Flooding and Entrainment	385	8.2	Gas-Loaded Heat Pipes	498
6.4.2	Dryout Limitation	395	8.2.1	Operating Principles	498
6.4.3	Boiling Limitation	397	8.2.2	Types of Gas-Loaded Heat Pipes	499
6.5	Transient and Oscillatory Behavior of Thermosyphons	398	8.3	Gas-Loaded Heat Pipe Modeling	502
6.5.1	Near-Dryout Oscillation	398	8.3.1	Introduction	502
6.5.2	Geyser Boiling	399	8.3.2	Steady Flat-Front Model	505
6.5.3	Flooding Oscillation	400	8.3.3	Transient Flat-Front Model	508
6.6	Minimum Liquid Fill Requirement	403	8.3.4	One-Dimensional Steady Diffuse Models	512
6.6.1	General Solution	404	8.3.5	Modified One-Dimensional Steady Diffuse Flat-Front Models	516
6.6.2	Simplified Analysis	408	8.3.6	One-Dimensional Transient Modeling	521
6.7	Thermosyphons with Capillary Wicks	410	8.3.7	Two-Dimensional Steady and Transient Models	526
6.7.1	Entrainment and Flooding	410	8.4	Gas-Loaded Thermosyphon Modeling	536
6.7.2	Boiling in Porous Wicks	413	8.4.1	Introduction	536
6.8	Complete Steady/Transient Two-Dimensional Analysis of Thermosyphons	419	8.4.2	Two-Dimensional Steady Diffuse Model of the Condenser Section	538
References		434	8.4.3	Steady-Transient Conjugate Gas-Loaded Thermosyphon Analysis	541
7	ROTATING AND REVOLVING HEAT PIPES	441	8.5	Gas-Loaded Rotating Heat Pipe Modeling	550
7.1	Introduction	441	8.6	Concluding Remarks	571
7.2	Rotating Heat Pipes	445	References		574
7.2.1	Liquid Flow Modeling	445			

9 CAPILLARY PUMPED LOOP AND LOOP HEAT PIPE SYSTEMS	578
9.1 Introduction	578
9.2 Operating Principles of the CPL and LHP	582
9.3 Transport Limits	585
9.4 CPL Elements	587
9.4.1 Evaporator	587
9.4.2 Condensers	591
9.4.3 Transport Lines	592
9.4.4 Liquid-Vapor Reservoir	592
9.4.5 Subcooler	593
9.5 Analyses of CPL	593
9.5.1 A Transient Lumped Heat Capacity Model for the CPL Evaporator	594
9.5.2 Temperature Oscillation During Transient Operation	598
9.5.3 Detailed Study of the Capillary Evaporator Performance	601
9.6 CPL Variations	611
9.6.1 Thermal Power Loops (TPL)	611
9.6.2 Mechanically-Assisted Capillary Pumped Loops	612
9.7 LHP Operational Characteristics	614
9.8 CPL Operational Characteristics	616
9.8.1 Variable Conductance and Operating Temperature Control	616
9.8.2 Pressure Priming Under Heat Loads	618
9.8.3 Heat Load Sharing	618
9.8.4 Diode Function of Condensers	618
9.8.5 Hybrid CPL	620
9.9 Flight Testing of CPL and LHP	621
9.10 Concluding Remarks	621
References	622
10 MICRO/MINIATURE HEAT PIPE CHARACTERISTICS AND OPERATING LIMITATIONS	625
10.1 Introduction	625
10.2 Vapor Continuum Limitation	631
10.3 Boiling Limitation	635
10.4 Capillary Limitation	636
10.5 Thermal Analysis of Micro Heat Pipes	641

10.5.1 Mathematical Model	642
10.5.2 Heat Transfer in the Condenser	648
10.5.3 Heat Transfer in the Evaporator	651
10.5.4 Liquid Flow in a Capillary Groove	654
10.5.5 Numerical Treatment and Predictions	655
10.6 Manufacturing and Charging Micro Heat Pipes	664
10.7 Concluding Remarks	670
References	671
11 HEAT PIPE HEAT EXCHANGERS	675
11.1 Introduction	675
11.2 Heat Exchanger Classification	676
11.3 HPHE Design	679
11.4 Thermal and Pressure Drop Design	682
11.4.1 Heat Transfer Analysis	682
11.4.2 Pressure Drop Analysis	688
11.4.3 Thermal Resistance	689
11.5 HPHE Design Optimization	697
11.6 HPHE Experimental and Analytical Research Review	699
11.7 HPHE Applications	702
References	708
12 ANALYSIS OF NONCONVENTIONAL HEAT PIPES	711
12.1 Introduction	711
12.2 Leading Edge and Nosecap Heat Pipes	713
12.2.1 Mathematical Modeling	715
12.2.2 Performance Predictions	722
12.2.3 Analysis of Heat Transport Limitations	730
12.2.4 Concluding Remarks	735
References	736
13 SPECIAL EFFECTS ON HEAT PIPES	737
13.1 Introduction	737
13.2 Osmosis	737
13.3 Electrohydrodynamic Effects (EHD)	739
13.4 Magnetohydrodynamic Effects (MHD)	743
13.5 Acceleration	753
13.6 Vibration	757
References	760

14 HEAT PIPE FABRICATION, PROCESSING, AND TESTING	762
14.1 Introduction	762
14.2 Heat Pipe Fabrication	763
14.2.1 Heat Pipe Component Construction	763
14.2.2 Cleaning and Deoxidizing	767
14.2.3 Heat Pipe Assembly	769
14.2.4 Leak Detection	770
14.2.5 Instrumentation	773
14.2.6 Heat Pipe Evacuation and Charging	783
14.3 Evaluation of Fluid and Wick Properties	788
14.3.1 Wetting Angle	788
14.3.2 Effective Pore Radius	789
14.3.3 Permeability	791
14.4 Heat Pipe Performance Testing	793
14.4.1 Low-Temperature Heat Pipes	793
14.4.2 High-Temperature Heat Pipes	796
References	801
APPENDIX A: THERMOPHYSICAL PROPERTIES	803
APPENDIX B: EXPERIMENTAL HEAT PIPE RESULTS	834
INDEX	859
