

Mammography – Assessment of Image Quality

Contents

Preface	1
Abstract	3
Executive Summary	5
1 Introduction	7
2 Mammography in Clinical Practice	9
2.1 Breast Cancer	9
2.2 Anatomy and Physiology of the Breast	9
2.3 Pathology of the Breast	9
2.4 Radiological Signs of Breast Cancer	10
2.4.1 Calcifications	11
2.4.2 Masses	11
2.4.3 Asymmetry	11
2.4.4 Architectural Distortion	12
2.4.5 Other Signs	12
2.5 Indications for Mammography	12
2.5.1 Symptomatic Women: Diagnosis	12
2.5.2 Asymptomatic Women: Screening	12
2.6 Role of Ultrasound	12
2.7 Role of Magnetic Resonance Imaging	13
2.8 Clinical Qualitative Evaluation of the Mammographic Process	13
2.9 Reporting	14
2.10 The Mammographic Examination	14
3 Production of the Mammogram	15
3.1 Physics of Image Formation	15
3.2 Equipment for Mammography	17
3.2.1 The X-Ray Unit	17
3.2.2 Automatic Exposure Control	18
3.2.3 Magnification Mammography	19
3.2.4 Screen-Film Mammographic Image Receptor	19
3.2.4.1 Screen-Film	19
3.2.4.2 Film Processing	20
4 Digital Mammography	21
4.1 Detectors for Digital Mammography	21
4.2 Types of Digital Mammography Systems	22
4.2.1 Type 1: Photostimulable-Phosphor System	22
4.2.2 Type 2: Flat-Plate Cs(I) with Photodiode Array	23

4.2.3	Type 3: Flat-Plate Amorphous Selenium with Electrode Array	23
4.2.4	Type 4: Slot Scanning CsI Integrating Detector with CCD Readout	23
4.2.5	Type 5: Slot-Scanning Quantum-Counting Gaseous or Solid Detector	24
4.2.6	Phase-Contrast Digital Mammography	24
4.2.7	Stereotactic Biopsy Devices	24
4.3	Image Processing	25
4.3.1	Flat-Field Correction	25
4.3.2	Resolution Restoration	25
4.3.3	Additional Image-Processing Operations	25
4.4	Computer-Aided Diagnosis (CAD) for Mammography	26
4.4.1	Computer-Aided Detection	26
4.4.1.1	Methodology	27
4.4.1.2	Performance: Laboratory	29
4.4.1.3	Performance: Clinical	30
4.4.2	Computer-Aided Diagnosis for Characterization of Lesions	30
4.4.2.1	Methodology	30
4.4.2.2	Performance: Laboratory	31
5	Technical Aspects of Image Quality in Mammography	33
5.1	ROC Analysis	33
5.1.1	Sensitivity	34
5.2	Noise	36
5.2.1	Standard Deviation	37
5.2.2	Wiener Spectrum	37
5.2.3	Dependence of Noise on Detector Characteristics	37
5.2.3.1	Noise in Screen-Film Mammography	38
5.2.3.2	Noise in Digital Mammography	38
5.3	Contrast	38
5.3.1	Radiation Contrast	39
5.3.1.1	X-Ray Energy Spectrum	39
5.3.1.2	Contrast in Digital Mammography	41
5.3.1.3	Compression	41
5.3.1.4	Scattered Radiation	41
5.3.1.5	Receptor Contrast in Screen-Film Systems	43
5.3.1.6	Receptor Contrast in Digital Mammography	44
5.3.2	Spatial Resolution	44
5.3.2.1	Geometric Unsharpness	44
5.3.2.2	Magnification Factor	46
5.3.2.3	Receptor Blurring	46
5.3.2.4	Motion Blurring	48
5.3.2.5	Compromise Between Geometric and Motion Unsharpness	48
5.3.2.6	Image Optimization	48
5.3.3	Image Display for Digital Mammography	48
5.3.3.1	Image Viewing for Film and Hard-Copy Digital Mammography	49
5.3.3.2	Image Viewing for Soft-Copy Digital Mammography	49
5.3.4	Artifacts	50
5.3.5	Absorbed Dose	50
5.3.5.1	Screen-Film Mammography	50
5.3.5.2	Digital Mammography	50
6	Patient Dosimetry in Mammography	53
6.1	Specification of Dosimetric Quantities Used in Mammography	54
6.1.1	Incident Air Kerma and Incident Air-Kerma Rate	54
6.1.2	Entrance-Surface Air Kerma and Entrance-Surface Air-Kerma Rate	56
6.1.3	Dose-Conversion Coefficients for Mammography	56
6.2	Method for Determination of Mean Glandular Dose, D_g	57

6.2.1	Determination of Incident Air Kerma, $K_{a,i}$	57
6.2.2	X-Ray Tube Output	57
6.2.3	Conversion Coefficients for Dosimetry	57
6.2.4	Determination of the First Half-Value Layer, HVL_1	59
6.2.5	Determination of Compressed-Breast Thickness	60
6.3	Calibration and Characteristics of Dosimeters for Mammography	60
6.3.1	Methodology of Chamber Calibrations	60
6.3.2	Considerations for Ionization Chambers Used for Measurements in the Field	60
6.3.2.1	Energy Dependence of Chambers	61
6.3.2.2	Effect of Energy Response on Ionization Chamber Measurements	62
6.3.3	Measurements with TLD	62
6.3.3.1	Uncertainties in TL Measurements	63
6.4	Conclusions	63
7	Measurement of Image Quality in Mammography	65
7.1	Technical <i>versus</i> Clinical Field Assessment	65
7.2	Mammographic Phantoms and Test Objects	65
7.3	Sensitivity and Contrast	66
7.3.1	Target Optical Density and Exposure	66
7.3.2	Measurement of Overall Contrast	66
7.3.2.1	Film Tests of Display Sensitivity and Contrast	67
7.3.2.2	Sensitivity in Digital Mammography	67
7.3.2.3	Contrast in Digital Mammography	68
7.3.2.4	Measurement of Radiation Contrast	68
7.4	Measurement of Spatial Resolution	68
7.4.1	Limiting Resolution	68
7.4.2	Required Resolution	68
7.4.3	Point-, Line-Spread Functions, and Edge Response	69
7.4.4	Modulation-Transfer Function (MTF)	69
7.4.5	Spatial Resolution in Digital Mammography	69
7.4.5.1	Measurement of the MTF in Digital Mammography	70
7.4.5.2	Presampled MTF	70
7.5	Measurement of Noise Properties	70
7.5.1	Standard Deviation	70
7.5.2	Wiener Spectrum	71
7.5.3	Signal-to-Noise Ratio	71
7.5.4	Noise-Equivalent Quanta (NEQ)	71
7.5.5	Measurement of Signal-Difference-to-Noise Ratio (SDNR) in a Digital Mammography System	71
7.5.6	Detective-Quantum Efficiency (DQE)	71
7.5.7	Measurement of Wiener Spectrum in a Digital Mammography System	72
7.5.8	Effect of Spatial Resolution and X-Ray Spectrum on Noise	73
7.5.9	Contrast-Detail Measurements	74
8	Conclusions	77
Appendix A: Quality-Control Programs	79
A.1	Japan	79
A.2	Latin America	79
A.3	The USA	79
A.4	European Community	80
Appendix B: Examples of Phantom and Test Tools for Mammography QC	81
Glossary of Imaging Terms	83
References	89
