

and transition probabilities in ions of high nuclear charge. The use of modern accelerators combined with electron and laser cooling can be applied to the study of fundamental properties of heavy ions with high precision. Applicability of the relativistic many-body techniques and high orders of QED theory is discussed as a tool for calculating Lamb shifts, hyperfine structure, transition probabilities and other fundamental properties of heavy ions.

Part C, *Collisional and Radiative Processes*, is devoted to radiative and collisional elementary processes involving heavy ions – excitation, ionization, and electron capture. These processes are mainly responsible for charge-changing reactions occurring in high-temperature astrophysical and laboratory plasmas which define beam lifetimes of the stored ions, their heating, energy losses, the charge-state balance, and finally, characteristic electromagnetic radiation.

We hope the reader will find this book as instructive and exciting as we have found it while assembling the material. We appreciate the constructive and fruitful cooperation of all contributors, to whom we express our gratitude. We are also grateful to many other colleagues who helped us to systematize the material. Our special thanks are addressed to Dr. C. Ascheron of Springer-Verlag for his continuous interest in this book.

## Table of Contents

<b>List of Contributors</b> .....	IX
<hr/>	
<b>Part A. Experimental Methods</b>	
<hr/>	
<b>I Heavy-Ion Storage Rings</b>	
Andreas Wolf .....	3
<b>II Physics at the Electron Beam Ion Trap</b>	
D.H.G. Schneider, J. Steiger, T. Schenkel and J.R. Crespo Lòpez-Urrutia	30
<hr/>	
<b>Part B. Fundamental Properties</b>	
<hr/>	
<b>III Quantum Electrodynamics of Highly Charged Ions</b>	
Günter Plunien and Gerhard Soff .....	63
<b>IV Electron Correlation Effects in Few-Electron Atoms</b>	
Paul Indelicato .....	92
<b>V Relativistic Effects in Spectra of One- and Two-Electron Ions</b>	
Vitalij G. Pal'chikov .....	117
<b>VI Hyperfine Structure of Highly Charged Ions</b>	
Vladimir M. Shabaev .....	139
<b>VII Ground-State Lamb Shift in Heavy Ions</b>	
Dieter Liesen and Heinrich F. Beyer .....	160
<b>VIII Laser Spectroscopy</b>	
Thomas Kühl .....	181
<b>IX Lifetimes of Excited States in Highly Charged Ions</b>	

Lorenzo J. Curtis and Indrek Martinson .....	197
<b>X Beta Decay of Highly Charged Ions</b>	
Fritz Bosch .....	219
<hr/>	
<b>Part C. Collisional and Radiative Processes</b>	
<hr/>	
<b>XI Relativistic Ion–Atom Collisions</b>	
Jörg Eichler and Thomas Stöhlker .....	249
<b>XII Electron-Impact Ionization and Recombination of Highly Charged Ions</b>	
Alfred Müller .....	272
<b>XIII Excitation of Atoms by Multiply Charged Ions</b>	
Ratko K. Janev .....	291
<b>XIV Projectile Ionization and Capture Reactions in Ion–Atom Collisions</b>	
Viatcheslav P. Shevelko, D. Böhne, B. Franzke and Th. Stöhlker .....	305
<b>XV Charge Changing Processes in Ion–Ion Collisions</b>	
Frank Melchert .....	323
<b>XVI Rearrangement Reactions in Ion–Ion Interactions</b>	
Leonid P. Presnyakov, E. Salzborn and H. Tawara .....	349
<b>XVII Hollow Atoms</b>	
Brigitte Ban-d’Etat and Jean Pierre Briand .....	360
<b>XVIII Large Charged Clusters in Plasmas</b>	
Boris M. Smirnov .....	381
Subject Index .....	395
