
CONTENTS

CHAPTER 1	Electrodynamics in Space	1
1.1	Introduction	1
1.2	Solar (Stellar) Wind	2
1.3	Interplanetary Magnetic Field	3
1.4	Interplanetary Electric Field	3
1.5	Solar (Stellar) Activity	5
1.6	Collisionless Shocks	5
1.7	Magnetospheres	7
1.8	Heliosphere and Heliopause	14
1.9	Comparative Magnetospheres	15
CHAPTER 2	Equations and Definitions	19
2.1	Introduction	19
2.2	Maxwell Equations	19
2.3	Lorentz Equation of Motion	20
2.4	Statistical Concepts	21
2.5	Statistical Equations	24

2.6	Lorentz Transformation of Electromagnetic Fields	32	5.2	General Concepts of Fluid Dynamics	142	
2.7	Charged Particles	35	5.3	One-Fluid Magnetohydrodynamic Equations	148	
2.8	How to Study Plasma Phenomena in Space	38	5.4	Magnetic Field and MHD Fluids	156	
CHAPTER 3 Electromagnetic Fields in Space			41	5.5	Flow of MHD Fluid	168
3.1	Introduction	41	5.6	Derivation of the Momentum Equation	173	
3.2	Representations of Electromagnetic Fields	46	5.7	Maxwellian Plasma	178	
3.3	Magnetic Fields in Space	52	5.8	Restrictions of MHD Fluids	183	
3.4	Inhomogeneous Magnetic Fields	61	CHAPTER 6 Solar Wind, Interplanetary Magnetic Field, and Plasma Convection			
3.5	Rotational Magnetic Fields	66	6.1	Introduction	193	
3.6	Electric Fields in Space	71	6.2	Static Atmospheres	195	
3.7	Concluding Remarks	73	6.3	Solar Wind Theory	204	
CHAPTER 4 Particles in Space			79	6.4	Interplanetary Magnetic Field	219
4.1	Introduction	79	6.5	Magnetospheric Convection and Plasmapause	229	
4.2	Discovery of Earth's Radiation Belt	81	6.6	Concluding Remarks	237	
4.3	Lorentz Equation of Motion	86	CHAPTER 7 Currents in Space			
4.4	Guiding Center Drift Equation	93	7.1	Introduction	243	
4.5	Motion in an Inhomogeneous Magnetic Field	99	7.2	Currents in Plasmas	246	
4.6	Adiabatic Invariants	107	7.3	Boundary Current (Chapman-Ferraro Current)	248	
4.7	Trapped Particles in the Magnetosphere	111	7.4	Ring Current in Magnetospheres	256	
4.8	Earth's Radiation Belt Particles	118	7.5	Currents in Plasmas Including Collisions	271	
4.9	Motion of Trapped Particles in Non-Dipole Field	124	7.6	Currents in Ionospheres	279	
4.10	Particle Motion in Magnetic Neutral Points	128	7.7	Field-Aligned Currents	285	
4.11	Concluding Remarks	134	7.8	Magnetic Tail Currents	297	
CHAPTER 5 Magnetohydrodynamic Equations and Concepts			141	7.9	Concluding Remarks	302
5.1	Introduction	141	CHAPTER 8 Boundaries in Space			
			309	8.1	Introduction	309
			310	8.2	Basic Equations and Assumptions	310

8.3	Closed and Open Boundary Models	316	11.5	Magnetospheric Instability	478
8.4	Continuity of Momentum and Energy	325	11.6	Concluding Remarks	491
8.5	Equations of MHD Discontinuities	329			
8.6	Test of Theory	335			
8.7	Boundary Layer of Closed Boundaries	342			
CHAPTER 9	Waves in Space	357	APPENDIX A	Useful Constants and Units	499
9.1	Introduction	357	APPENDIX B	Average Plasma Properties of Earth's Environment	501
9.2	Electrostatic and Electromagnetic Waves in Space	358	APPENDIX C	Useful Vector and Tensor Formulas	505
9.3	Basic Equations and Concepts	362	C.1	Vector Operators	506
9.4	Electrostatic Waves	369	C.2	Change of Variables	508
9.5	Electromagnetic Waves	380	APPENDIX D	Magnetic Indices	511
9.6	Whistlers in Earth's Magnetosphere	389	D.1	A_E Index	511
9.7	Magnetohydrodynamic Waves in Isotropic Fluids	393	D.2	K_p index	512
9.8	Concluding Remarks	404	D.3	D_{st} Index	513
CHAPTER 10	Shocks in Space	413	BIBLIOGRAPHY		514
10.1	Introduction	413			
10.2	Basic Concepts and Definitions	414			
10.3	Shock Waves in Ordinary Fluids	421			
10.4	MHD Shocks	423			
10.5	Acceleration of Particles at Shocks	436			
10.6	Foreshock Particle Structure and Waves	441			
10.7	Structure of Weak MHD Shocks	446			
10.8	Concluding Remarks	453			
CHAPTER 11	Instabilities in Space	459			
11.1	Introduction	459			
11.2	Classification of Instabilities	460			
11.3	Methods of Instability Analysis	460			
11.4	MHD Instabilities	462
