## Quantification and Reporting of Low-Dose and Other Heterogeneous Exposures

Preface 1								
Ab	Abstract							
Exe	Executive Summary 5							
Glo	Glossary							
Lis	List of Symbols							
1.	. Introduction							
	1.1 1.2	Background and Scope       1         Outline of Report       1	13 14					
2.	Hete	rogeneity: Physical, Chemical, and Biological Considerations	17					
	2.1	Heterogeneity of Energy Deposition by Particles       1         2.1.1 Description of Particle Tracks       1         2.1.2 Tracks of Electrons       1         2.1.3 Tracks of Ions       1         2.1.4 Tracks of Auger Electrons       2	17 17 18 19 24					
	2.2	Hateks of Hager Encourons of Tracks       2         Heterogeneity in Starting Points of Tracks       2         2.2.1 Tracks Produced by External Photon Irradiation       2         2.2.2 Tracks Produced by Neutron Irradiation       2         2.2.3 Tracks from Internally Incorporated Radionuclides       2         2.2.4 Heterogeneity in a Target Exposed to External Radiation       2         2.2.5 Experimentally Induced Heterogeneity       2	26 26 27 27 28 28					
	2.3 2.4 2.5	Dimensions of Chemical and Biological Targets Relevant to Heterogeneity	28 28					
		Descriptions of Radiation Exposure       2         2.5.1       Biomolecular Processes Following Low Levels of Energy Deposition       3         2.5.2       Cellular Responses to Non-Homogeneous Energy Depositions       3         2.5.3       Response of Solid-State Electronic Devices to Non-Homogeneous Energy Depositions       3         Energy Depositions       3         Energy Depositions       3	29 30 30 31					
3.	Rad	ation Exposure from Internally Deposited Radionuclides	33					
	3.1	Sources of Incorporated Radionuclides       3         3.1.1 Cosmogenic Radionuclides       3         3.1.2 Terrestrial Radionuclides       3         3.1.2.1 Series Radionuclides       3         3.1.2.2 Non-Series Radionuclides       3	33 33 33 33 33 34					

	3.2 3.3 3.4	3.1.3 Man-Made Radionuclides3.1.4 The Influence of Physical Form and Distribution.Heterogeneity of Energy Deposition.Radiobiological Use of Incorporated Radionuclides3.3.1 Beta-Particle Emitters.3.3.2 Alpha-Particle Emitters.Heterogeneity from Internally Deposited Radionuclides Used forClinical Diagnosis	34 35 35 36 36 37
	3.5	Internally Deposited Radionuclides for Therapy	38
4.	Hete	erogeneous Energy Deposition from External Radiations	39
	4.1 4.2 4.3 4.4	Tracks from High-Z, High-Energy Particles4.1.1HZE Environment in Space4.1.2Characteristics of Accelerator-Based HZE-Particle IrradiationsNeutron-Capture TherapyPhoton Microplanar Radiation Therapy ResearchMedical Applications of Ion Beams4.4.1Proton-Beam Therapy4.4.2High-LET Treatment Beams	39 39 39 40 40 41 41 41
5.	Hete	erogeneity Induced for Mechanistic Studies	43
	5.1 5.2 5.3 5.4 5.5 5.6	Broad-Beam and Stripe-Filter Techniques5.1.1 High-LET Sources5.1.1.1 Partial-Shielding Experiments5.1.1.2 Co-Culture Irradiations5.1.2 Low-LET Sources5.1.3 Striped and Gridded ExposuresMicrobeam ExposuresMicrobeam ExposuresIncorporated RadionuclidesPhoton-Induced Auger EffectSummary of Irradiations with External Beams and Incorporated Radionuclides	43 43 44 44 44 45 46 48 48 48 49
6.	Opt	ions for Characterizing Energy Deposition	51
	6.1 6.2	Objectives.         Absorbed Dose.         6.2.1 Description of the Concept         6.2.1.1 Physical Quantities         6.2.1.2 Weighting Factors to Modify Absorbed Dose.         6.2.2 Advantages of the Absorbed-Dose Approach         6.2.3 Limitations of the Absorbed-Dose Approach	51 52 52 52 52 55
	6.3	<ul> <li>6.3.1 Description of the Concept</li> <li>6.3.2 Advantages of Energy Imparted per Event</li> <li>6.3.3 Limitations of Energy Imparted per Event</li> </ul>	55 56 57 58
	6.4	Radiometric Quantities6.4.1 Description of the Concept6.4.2 Advantages of Radiometric Quantities6.4.3 Limitations of Radiometric Quantities	58 58 59 60

7.	Reco	ommendations	61			
	7.1	General Principles	61			
	7.2	Adequate Subsets of the Energy Distribution of Particle Radiance	61			
	7.3	Conclusion	63			
Appendix A: Examples of Recommended Approaches to Specifying and Reporting						
Irradiations						
	A.1	Broad-Beam Photon Irradiation	65			
	A.2	Radionuclides Uniformly Distributed in Tissue	65			
	A.3	Radioactive Particles in a Tissue	66			
	A.4	Exposure of Small Animals to Monoenergetic Neutrons from a Charged-Particle				
		Accelerator	66			
	A.5	Counted Alpha-Particle Microbeam Exposure of Cells in a Dish	66			
	A.6	Focused Soft X-Ray Microbeam Exposure of Cells in a Dish	67			
	A.7	Broad-Field Exposure of Cells in a Dish With and Without Gridded or				
		Striped Filters	67			
	<b>A.8</b>	Ionizing Radiation in a Space Vehicle	68
