1 Introduction: The fiber optics revolution	1
2 Basic optics	9
2.1 Introduction	9
2.2 Plane polarized waves	9
2.2.1 Production of plane polarized waves	12
2.3 Circularly and elliptically polarized waves	12
2.4 Propagation of a light wave through a quarter-wave plate	14
2.5 Reflection at a plane interface	16
2.5.1 Brewster angle	17
2.5.2 Total internal reflection	18
2.6 Two-beam interference	19
2.6.1 Fiber optic Mach–Zehnder interferometer	21
2.7 Concept of coherence	24
2.8 Diffraction of a Gaussian beam	25
3 Basic characteristics of the optical fiber	29
3.1 Introduction	29
3.2 The numerical aperture	32
3.3 The coherent bundle	33
3.4 Attenuation in optical fibers	34
3.5 Pulse dispersion in step index optical fibers	35
3.6 Loss mechanisms	39
3.6.1 Absorptive losses	39
3.6.2 Radiative losses	40
4 Ray paths and pulse dispersion in planar optical waveguides	44
4.1 Introduction	44
4.2 The one-dimensional ray equation	44
4.2.1 Ray paths in a homogeneous medium	46
4.2.2 Ray paths in square law media	46
4.3 Transit time calculations	50
4.3.1 Pulse dispersion in a parabolic index medium	51
4.3.2 Pulse dispersion in a planar step index waveguide	53
4.4 Transit time calculations in a medium characterized by a power law profile	55
5 Pulse dispersion in graded index optical fibers	65
5.1 Introduction	65
5.2 Pulse dispersion	66
5.2.1 Effect of material dispersion on the optimum profile	72
5.3 Derivation of the expression for $\tau(\tilde{\beta})$	73
6 Material dispersion	78

6.1	Introduction	78
6.2	Calculation of material dispersion	78
	6.2.1 Material dispersion in pure and doped silica	80
	6.2.2 Material dispersion in fluoride glasses	83
6.3	Derivation of group velocity	84
6.4	Broadening of a Gaussian pulse	89
7	Modes in planar waveguides	97
	7.1 Introduction	97
	7.2 Maxwell's equations in inhomogeneous media: TE and TM modes in planar waveguides	97
	7.3 TE modes of a symmetric step index planar waveguide	100
	7.3.1 Physical understanding of modes	105
	7.4 TM modes of a symmetric step index planar waveguide	109
	7.5 The relative magnitude of the longitudinal components of the E and H fields	113
	7.6 Power associated with a mode	114
	7.7 Radiation modes	115
	7.8 Excitation of guided modes	116
	7.9 The parabolic index waveguide	118
8	Propagation characteristics of a step index fiber	132
	8.1 Introduction	132
	8.2 Scalar modes in the weakly guiding approximation	132
	8.3 Modal analysis for a step index fiber	135
	8.4 Fractional modal power in the core	146
	8.5 Single-mode fibers	149
	8.5.1 The Gaussian approximation	149
	8.5.2 Splice loss	151
	8.5.3 The Petermann-2 spot size	156
	8.5.4 The far-field pattern	157
9	Propagation characteristics of graded index fibers	173
	9.1 Introduction	173
	9.2 Modal analysis of a parabolic index fiber	173
	9.3 The LP_{lm} modes	177
	9.4 Multimode fibers with optimum profiles	178
10	Waveguide dispersion and design considerations	184
	10.1 Introduction	184
	10.2 Expressions for group delay and waveguide dispersion	184
	10.3 Empirical formula for step index fibers	187
	10.4 Dispersion-shifted fibers	192
	10.5 Design considerations	193
	10.5.1 Single-mode operation	193
	10.5.2 Splice loss	194
	10.5.3 Bend loss	195
11	Sources for optical fiber communication	200
	11.1 Introduction	200
	11.2 Communication requirements	200
	11.3 Laser fundamentals	201
	11.3.1 Absorption and emission of radiation	201
	11.3.2 Condition for amplification by stimulated emission	204

11.3.3	Laser oscillation	206
11.3.4	Resonator modes	208
11.4	Semiconductor laser: basics	209
11.4.1	Energy bands and carrier distribution in semiconductors	210
11.4.2	Absorption and emission in a semiconductor	212
11.4.3	Optical gain in a semiconductor	215
11.4.4	Gain in a forward biased p–n junction	217
11.4.5	Laser oscillation and threshold current	220
11.4.6	Heterostructure lasers	221
11.4.7	Choice of materials	224
11.5	Laser diode characteristics	226
11.5.1	Laser threshold	226
11.5.2	Output spectrum	229
11.5.3	Radiation pattern	233
11.5.4	Modulation of semiconductor lasers	234
11.5.5	Frequency chirping	235
11.6	LED characteristics	235
12	Detectors for optical fiber communication	238
12.1	Introduction	238
12.2	Principle of optical detection	238
12.3	PIN photodetector	239
12.3.1	Responsivity and quantum efficiency	240
12.3.2	Speed of response	244
12.4	Avalanche photodiodes (APDs)	246
13	Design considerations of a fiber optic communication system	249
13.1	Introduction	249
13.2	Analog and digital modulation	250
13.3	Noise in detection process	259
13.3.1	Shot noise	259
13.3.2	Thermal noise	260
13.3.3	Signal-to-noise ratio (SNR)	260
13.4	Bit error rate (BER)	265
13.5	System design	269
13.5.1	Power budgeting	269
13.5.2	Rise time budgeting	271
13.6	Maximum transmission distance due to attenuation and dispersion	275
13.6.1	Attenuation limit	275
13.6.2	Dispersion limit	276
14	Optical fiber amplifiers	281
14.1	Introduction	281
14.2	Optical amplification	286
14.3	Energy levels of erbium ions in silica matrix	290
14.4	Amplifier modeling	292
14.4.1	Variation of pump and signal powers with length	296
14.5	Gaussian envelope approximation	298
14.6	Solutions under the Gaussian envelope approximation	299
14.7	Small signal approximation	301

14.8	Signal saturation	305
14.9	Gain spectrum and gain bandwidth	306
14.10	Noise in EDFA	308
14.11	EDFAs for WDM transmission	309
14.12	Comparison with plane wave case	312
14.13	Relation between mole ppm, weight ppm, and ions/cm ³ of er concentration	313
14.14	Demonstration of some EDFA systems	314
15	Dispersion compensation and chirping phenomenon	323
15.1	Introduction	323
15.2	Dispersion compensation	323
15.3	Dispersion compensating fibers	325
15.4	Dispersion management in WDM systems	328
15.5	Dispersion and chirping	330
15.6	Compression of a chirped pulse	334
15.7	Propagation of a chirped pulse through a linear dispersive medium	335
15.8	Dispersion compensation of a Gaussian pulse	336
16	Optical solitons	339
16.1	Introduction	339
16.2	Self-phase modulation (SPM)	341
16.3	Spectra of self-phase modulated pulses	347
16.4	Heuristic derivation of soliton power	347
16.5	Compression of a chirped pulse	351
16.6	The nonlinear Schrödinger equation (NLSE)	353
	16.6.1 Propagation in absence of dispersion and nonlinearity	353
	16.6.2 Propagation in presence of dispersion only	354
	16.6.3 Propagation in presence of nonlinearity only	355
16.7	Soliton solution to NLSE	356
17	Single-mode fiber optic components	360
17.1	Introduction	360
17.2	The optical fiber directional coupler	361
	17.2.1 Principle	361
	17.2.2 Power exchange	362
	17.2.3 Coupling coefficient of identical fiber directional couplers	366
	17.2.4 Practical parameters of a coupler	369
17.3	Fabrication of fiber directional couplers	370
	17.3.1 Polished fiber couplers	370
	17.3.2 Fused couplers	372
17.4	Applications	373
	17.4.1 Power dividers	373
	17.4.2 Wavelength division multiplexers/demultiplexers	373
	17.4.3 Wavelength flattened couplers	375
17.5	Other polished fiber half-block devices	376
	17.5.1 Fiber polarizers	377
17.6	Multimode overlay fiber devices	380
17.7	Bandpass filters	383
17.8	Fiber polarization controllers	384

17.9	Fiber Bragg gratings	386
17.10	Fabrication of fiber gratings	391
17.11	Long-period fiber Bragg gratings	392
18	Single-mode optical fiber sensors	397
18.1	Introduction	397
18.2	Mach–Zehnder interferometric sensor	397
18.3	Current sensors	403
18.4	Fiber optic rotation sensor (gyroscope)	407
19	Measurement methods in optical fibers: I	411
19.1	Introduction	411
19.2	General experimental considerations	411
19.2.1	Fiber end preparation	411
19.2.2	Cladding mode stripping	412
19.2.3	Launching light into fibers	413
19.2.4	Coupling from fiber to detector	413
19.3	Measurement of attenuation	413
19.4	Measurement of refractive index profile	416
19.4.1	The transmitted near-field (TNF) method	417
19.4.2	The refracted near-field (RNF) method	420
19.5	Measurement of NA	422
19.6	Measurement of pulse dispersion and bandwidth	423
19.6.1	Multimode fibers	423
19.6.2	Single-mode fibers	425
20	Measurement methods in optical fibers: II	430
20.1	Introduction	430
20.2	Cutoff wavelength	430
20.2.1	Bend reference technique	431
20.2.2	Multimode reference technique	434
20.3	Bending loss measurement	434
20.4	Mode field diameter (MFD)	435
20.5	Gaussian mode field diameter	436
20.5.1	Near-field technique	437
20.5.2	Far-field technique	438
20.5.3	Transverse offset technique	439
20.6	Birefringence measurements	441
20.6.1	Rayleigh scattering technique	444
20.6.2	Magneto optic modulation	446
20.6.3	Prism-coupling technique	447
21	Periodic interactions in waveguides	452
21.1	Introduction	452
21.2	Coupled-mode equations	454
21.2.1	Solution under phase matching	455
21.2.2	General case	458
21.3	Application to a wavelength filter	461
21.4	Coupling between orthogonal polarization in a birefringent fiber	464
21.5	In-line fiber frequency shifters	465
21.6	Grating input-output couplers	467
21.6.1	Pictorial representation for grating couplers	470
21.7	Contradirectional coupling	473

22	The ray equation in cartesian coordinates and its solutions	480
22.1	Introduction	480
22.2	The optical Lagrangian and the ray equation	480
22.3	The ray invariant $\tilde{\beta}$ for a waveguide	482
22.4	Exact solutions for a parabolic index fiber	483
22.4.1	Ray launched in the x - z plane (an example of a meridional ray)	484
22.4.2	Helical ray	485
23	Ray paths and their classification in optical fibers	488
23.1	Introduction	488
23.2	Ray equation for cylindrically symmetric refractive index profiles	488
23.3	Exact ray paths in a parabolic index fiber	491
23.3.1	Meridional rays ($\tilde{l} = 0$)	493
23.3.2	Helical rays ($\tilde{l} = \tilde{l}_h$)	494
23.4	Classification of rays	494
23.4.1	$\tilde{l} = 0$ meridional rays	495
23.4.2	$\tilde{l} > 0$ skew rays	496
24	Leaky modes	507
24.1	Introduction	507
24.2	Leakage loss calculations: approximate theory	507
24.3	Leaky structures and quasimodes	510
24.3.1	Quasimodes	510
24.3.2	Leakage of power	512
24.4	The matrix method	515
24.4.1	The general procedure	523
24.5	Calculation of bending loss in optical waveguides	524
Appendix A: Solution of the scalar wave equation for an infinite square law medium		529
Appendix B: The far-field pattern		531
Appendix C: WKB analysis of multimode fibers		535
C1.1	The propagation constants	535
C1.2	Group velocity and group delay per unit length	538
Appendix D: Gaussian envelope approximation		540
Appendix E: Coupled-mode equations		543
Appendix F: Derivation of coupled-mode equation for periodic coupling		547
Appendix G: Leakage loss in optical waveguides		553
