

CONTENTS

I.	THE BASIC EQUATIONS AND CONSERVATION LAWS	1
	1. Introduction	1
	2. Definition of charge and current densities	2
	3. Conservation of momentum	3
	4. A stationary state	7
	5. Conservation of energy	9
	6. The relation between the particle orbit theory and the Boltzmann equation	11
	References	13
II.	THE FIRST ORDER ORBIT THEORY	14
	7. Introduction	14
	8. The magnetic moment and the magnetization current	15
	9. The effect of a constant electric field	18
	10. Time dependent electric field	20
	11. Drifts due to external forces	23
	12. An adiabatic invariant	24
	13. Static inhomogeneous magnetic field	26
	14. Motions of the lines of force	31
	References	36
III.	THE ADIABATIC INVARIANTS IN THE MOTION OF CHARGED PARTICLES	37
	15. Introduction	37
	16. The equation of motion	38
	17. The solution of equation (12)	40
	18. The case of a discontinuous change in the magnetic field	45
	19. The slow variation of the field	48

20.	The gyro-relaxation effect	58	41.1	Perturbation in the magnetic field in the plasma	122
21.	The longitudinal invariant	61	41.2	Perturbation in the plasma pressure	125
	References	64	42.	The criterion for stability	127
IV.	APPLICATIONS OF THE FIRST ORDER ORBIT THEORY	65	43.	Propagation of hydromagnetic waves in a plasma	131
22.	The drifts	65		References	133
23.	A simple stationary state	67	VI.	PLASMA OSCILLATIONS	135
24.	Curved magnetic lines of force	69	44.	Introduction	135
25.	Plasma supported against gravity by a magnetic field	71	44.1	Transverse oscillations	138
26.	Plasma in a torus	73	44.2	Longitudinal oscillations	139
27.	The general two-dimensional problem	75	45.	Plasma oscillations in a magnetic field	140
28.	Stability in orbit theory; Rayleigh-Taylor instability	80	46.	Effect of thermal motions	143
29.	Thermodynamic description of stability	85	47.	Hydromagnetic waves from the orbit theory	146
29.1	Fluting instability	87	48.	Review of dispersion formulae for plasma oscillations	151
30.	Fluting instability from particle orbit theory	92	48.1	Dispersion formula of Bohm and Gross	154
	References	96	48.2	Dispersion formula of Thomson	156
V.	STABILITY OF THE PINCH	97	48.3	Dispersion formula of Gross	157
31.	The stationary state	97	49.	Oscillations in a plasma of low density	160
32.	Equations governing the perturbed state	99	50.	Plasma oscillations and Landau damping	165
33.	Perturbation in the plasma pressure	101	50.1	The characteristic value problem	168
34.	Perturbation in the vacuum field	106	50.2	Longitudinal oscillations	173
35.	The boundary conditions	107	50.3	Transverse oscillations	173
36.	The criterion for stability	110	50.4	Longitudinal oscillations in a plasma with finite temperature	174
37.	Absence of axial magnetic field and conducting walls	111		References	179
38.	Presence of conducting walls	112	VII.	TRANSPORT PHENOMENA IN IONIZED GASES	180
39.	The stabilized pinch	112	51.	Plasma diffusion	180
40.	Stability of the pinch from the orbit theory	115	51.1	Flux of guiding centers	182
41.	Perturbation in the transverse pressure	117	51.2	Zero order distribution function	184

51.3	Probability of collision	185
51.4	Calculation of Flux	189
52.	Thermal conductivity of a plasma	194
53.	Electrical conductivity of a plasma	204
54.	Electrical conductivity of a partially ionized gas	209
	References	214
	SUBJECT INDEX	215
