

Contents

Introduction to Fusion Reactor Engineering

An Effort for Systematization of Fusion Nuclear Technology K. Miya	... 1
Introduction to Physics of Magnetic Fusion M. Wakatani	... 11
Fusion Engineering Overview S. Tanaka	... 21
Present Status of Inertial Fusion Energy (IFE) Research K. Mima	... 35
Overview of ITER Project M. Seki	... 49
Korea Superconducting Tokamak Advanced Research Project The KSTAR Team	... 57
Large Helical Device Project and Long-Pulse Experiments N. Noda	... 69
Plasma Surface Interactions in Fusion Devices T. Hino	... 79
Heat Capture and Removal in High Heat and Particle Loading M. Nishikawa	... 89
Tritium in Fusion Reactor M. Nishikawa	... 99
Materials System Integration for Fusion Reactors K. Abe	... 113
Advanced Blanket Concepts and Their R&D Issues T. Terai	... 123
Development of Nuclear Pressure Vessel Materials H-C. Lee	... 139
Reduced Activation Fusion Structural Materials A. Kimura	... 145

Current Status of IEC (Inertial Electrostatic Confinement) Fusion Neutron/Proton Source Study	... 161
K. Yoshikawa	
14MeV Intense Neutron Source	... 169
H. Matsui	
Application of HVEM to Materials Science Considering Damage Effects	... 179
H. Takahashi	
Multiple Beam Charged Particle Irradiation Methods for Radiation Damage Studies of Fusion Materials	... 191
A. Kohyama	
Recent Irradiation Studies in Korea	... 203
K-S. Lee
