Part I Plasma physics preliminaries		1
1 Introduction		3
1.1 Motivation		3
1.2 Thermonuclear fusion and plasma confinement		4
1.2.1 Fusion reactions		4
1.2.2 Conditions for fusion		6
1.2.3 Magnetic confinement and tokamaks		10
1.3 Astrophysical plasmas		13
1.3.1 Celestial mechanics		13
1.3.2 Astrophysics		15
1.3.3 Plasmas enter the stage		18
1.3.4 The standard view of nature		21
1.4 Definitions of the plasma state		23
1.4.1 Microscopic definition of plasma		23
1.4.2 Macroscopic approach to plasma		27
1.5 Literature and exercises		29
2 Elements of plasma physics		34
2.1 Theoretical models		34
2.2 Single particle motion		34
2.2.1 Cyclotron motion		34
2.2.2 Excursion: basic equations of electrodynamics and mechanics		38
2.2.3 Drifts, adiabatic invariants		41
2.3 Kinetic plasma theory		47
2.3.1 Boltzmann equation and moment reduction		48
2.3.2 Collective phenomena: plasma oscillations		54
2.3.3 Landau damping		58

2.4	Fluid description	65
2.4.1	From the two-fluid to the MHD description of plasmas	67
2.4.2	Alfvén waves	71
2.4.3	Equilibrium and stability	74
2.5	In conclusion	79
2.6	Literature and exercises	80
3	'Derivation' of the macroscopic equations*	83
3.1	Two approaches*	83
3.2	Kinetic equations*	84
3.2.1	Boltzmann equation*	84
3.2.2	Moments of the Boltzmann equation*	88
3.2.3	Thermal fluctuations and transport*	90
3.2.4	Collisions and closure*	94
3.3	Two-fluid equations*	98
3.3.1	Electron-ion plasma*	98
3.3.2	The classical transport coefficients*	99
3.3.3	Dissipative versus ideal fluids*	104
3.3.4	Excursion: waves in two-fluid plasmas*	108
3.4	One-fluid equations*	119
3.4.1	Maximal ordering for MHD*	119
3.4.2	Resistive and ideal MHD equations*	124
3.5	Literature and exercises*	126
Part II Basic magnetohydrodynamics		129
4	The MHD model	131
4.1	The ideal MHD equations	131
4.1.1	Postulating the basic equations	131
4.1.2	Scale independence	138
4.1.3	A crucial question	139
4.2	Magnetic flux	140
4.2.1	Flux tubes	140
4.2.2	Global magnetic flux conservation	142
4.3	Conservation laws	145
4.3.1	Conservation form of the MHD equations	145
4.3.2	Global conservation laws	148
4.3.3	Local conservation laws – conservation of magnetic flux	152
4.3.4	Magnetic helicity	155
4.4	Dissipative magnetohydrodynamics	161
4.4.1	Resistive MHD	161
4.4.2	(Non-)conservation form of the dissipative equations*	165

4.5	Discontinuities	167
4.5.1	Shocks and jump conditions	167
4.5.2	Boundary conditions for plasmas with an interface	171
4.6	Model problems	173
4.6.1	Laboratory plasmas (models I–III)	174
4.6.2	Energy conservation for interface plasmas	178
4.6.3	Astrophysical plasmas (models IV–VI)	180
4.7	Literature and exercises	182
5	Waves and characteristics	186
5.1	Physics and accounting	186
5.1.1	Introduction	186
5.1.2	Sound waves	186
5.2	MHD waves	190
5.2.1	Symmetric representation in primitive variables	190
5.2.2	Entropy wave and magnetic field constraint	194
5.2.3	Reduction to velocity representation: three waves	198
5.2.4	Dispersion diagrams	202
5.3	Phase and group diagrams	205
5.3.1	Basic concepts	205
5.3.2	Application to the MHD waves	207
5.3.3	Asymptotic properties	212
5.4	Characteristics*	213
5.4.1	The method of characteristics*	213
5.4.2	Classification of partial differential equations*	216
5.4.3	Characteristics in ideal MHD*	219
5.5	Literature and exercises	227
6	Spectral theory	230
6.1	Stability: intuitive approach	230
6.1.1	Two viewpoints	230
6.1.2	Linearization and Lagrangian reduction	233
6.2	Force operator formalism	237
6.2.1	Equation of motion	237
6.2.2	Hilbert space	242
6.2.3	Proof of self-adjointness of the force operator	244
6.3	Spectral alternatives*	250
6.3.1	Mathematical intermezzo*	250
6.3.2	Initial value problem in MHD*	253
6.4	Quadratic forms and variational principles	256
6.4.1	Expressions for the potential energy	256

6.4.2	Hamilton's principle	259
6.4.3	Rayleigh–Ritz spectral variational principle	259
6.4.4	Energy principle	261
6.5	Further spectral issues	263
6.5.1	Normal modes and the energy principle*	263
6.5.2	Proof of the energy principle*	266
6.5.3	σ -stability	268
6.5.4	Returning to the two viewpoints	271
6.6	Extension to interface plasmas	274
6.6.1	Boundary conditions at the interface	276
6.6.2	Self-adjointness for interface plasmas	280
6.6.3	Extended variational principles	283
6.6.4	Application to the Rayleigh–Taylor instability	287
6.7	Literature and exercises	296
7	Waves and instabilities of inhomogeneous plasmas	300
7.1	Hydrodynamics of the solar interior	300
7.1.1	Radiative equilibrium model	301
7.1.2	Convection zone	305
7.2	Hydrodynamic waves and instabilities of a gravitating slab	308
7.2.1	Hydrodynamic wave equation	309
7.2.2	Convective instabilities	312
7.2.3	Gravito-acoustic waves	313
7.2.4	Helioseismology and MHD spectroscopy	317
7.3	MHD wave equation for a gravitating magnetized plasma slab	322
7.3.1	Preliminaries	322
7.3.2	Derivation of the MHD wave equation for a gravitating slab	327
7.3.3	Gravito-MHD waves	335
7.4	Continuous spectrum and spectral structure	345
7.4.1	Singular differential equations	345
7.4.2	Alfvén and slow continua	351
7.4.3	Oscillation theorems	357
7.4.4	Cluster spectra*	363
7.5	Gravitational instabilities of plasmas with magnetic shear	365
7.5.1	Energy principle for a gravitating plasma slab	366
7.5.2	Interchange instabilities in sheared magnetic fields	371
7.5.3	Interchanges in the absence of magnetic shear	376
7.6	Literature and exercises	379
8	Magnetic structures and dynamics	384
8.1	Plasma dynamics in laboratory and nature	384

8.2	Solar magnetism	385
8.2.1	The solar cycle	387
8.2.2	Magnetic structures in the solar atmosphere	395
8.3	Planetary magnetic fields	407
8.3.1	The geomagnetic dynamo	409
8.3.2	Magnetic fields of the other planets	413
8.4	Magnetospheric plasmas	415
8.4.1	The solar wind and the heliosphere	415
8.4.2	Solar wind and planetary magnetospheres	419
8.5	Perspective	426
8.6	Literature and exercises	427
9	Cylindrical plasmas	431
9.1	Equilibrium of cylindrical plasmas	431
9.1.1	Diffuse plasmas	431
9.1.2	Interface plasmas	436
9.2	MHD wave equation for cylindrical plasmas	438
9.2.1	Derivation of the MHD wave equation for a cylinder	438
9.2.2	Boundary conditions for cylindrical interfaces	445
9.3	Spectral structure	450
9.3.1	One-dimensional inhomogeneity	450
9.3.2	Cylindrical model problems	453
9.3.3	Cluster spectra*	462
9.4	Stability of cylindrical plasmas	462
9.4.1	Oscillation theorems for stability	462
9.4.2	Stability of plasmas with shearless magnetic fields	469
9.4.3	Stability of force-free magnetic fields	475
9.4.4	Stability of the ‘straight tokamak’	482
9.5	Literature and exercises	492
10	Initial value problem and wave damping*	496
10.1	Implications of the continuous spectrum*	496
10.2	Initial value problem*	497
10.2.1	Reduction to a one-dimensional representation*	498
10.2.2	Restoring the three-dimensional picture*	502
10.3	Damping of Alfvén waves*	507
10.3.1	Green’s function*	509
10.3.2	Spectral cuts*	512
10.4	Quasi-modes*	516
10.4.1	Dispersion equation*	517
10.4.2	Exponential damping*	520
10.4.3	Different kinds of quasi-modes*	522

10.5	Leaky modes*	523
10.5.1	Model equations and boundary conditions*	525
10.5.2	Normal-mode analysis*	528
10.5.3	Initial value problem approach*	529
10.6	Literature and exercises*	530
11	Resonant absorption and wave heating	533
11.1	Ideal MHD theory of resonant absorption	534
11.1.1	Analytical solution of a simple model problem	534
11.1.2	Role of the singularity	541
11.1.3	Resonant ‘absorption’ versus resonant ‘dissipation’	549
11.2	Heating and wave damping in tokamaks and coronal magnetic loops	553
11.2.1	Tokamaks	553
11.2.2	Coronal loops and arcades	554
11.2.3	Numerical analysis of resonant absorption	555
11.3	Alternative excitation mechanisms	561
11.3.1	Foot point driving	562
11.3.2	Phase mixing	565
11.3.3	Applications to solar and magnetospheric plasmas	567
11.4	Literature and exercises	573
Appendices		577
A	Vectors and coordinates	577
A.1	Vector identities	577
A.2	Vector expressions in orthogonal coordinates	578
A.2.1	Cartesian coordinates (x, y, z)	580
A.2.2	Cylinder coordinates (r, θ, z)	581
A.2.3	Spherical coordinates (r, θ, ϕ)	582
B	Tables of physical quantities	585
