

Contents

1 Phase Diagrams and Statistical Thermodynamics of Binary M–H Systems.	1
1.1 Introduction to Phase Diagrams.	1
1.2 Formation of Solid Solutions	5
1.2.1 Low Concentrations–Ideal Solution	5
1.2.2 High Concentrations–Effects of Interactions Between H Atoms	13
1.3 Spinodal Decomposition	18
1.4 Formation of Hydrides	21
1.4.1 Structure of Hydrides	21
1.4.2 Thermodynamics of Hydride Formation.	26
1.4.3 Terminal Solubility	31
1.5 Other General Issues Regarding the Relative Phase Stability.	38
1.5.1 Effects of Hydrogen on the Relative Stability of Allotropic Forms of Metals	38
1.5.2 Ellingham Diagrams.	40
2 Hydrogen in Alloys.	43
2.1 Effects of Alloying on the Solubility.	43
2.2 Effects of Alloying on the Terminal Solubility.	49
2.3 Hydrogen–Solute Interaction–Trapping and Blocking	53
2.4 Hydrogen in Amorphous Alloys.	57
2.4.1 Thermodynamical Properties of Hydrogen in Amorphous Alloys.	58
2.4.2 Site-Energy Distribution	60
2.4.3 A Structural Model of Hydrogen Absorption in Amorphous Alloys.	65
2.4.4 Amorphization Induced by Hydrogenation	68
3 Metal–Hydrogen System Under Extended p, T Conditions	71
3.1 Hydrogen	71
3.1.1 General Properties.	71
a) Atomic State: Spin-Polarized Atomic Gas	72
b) Molecules: Ortho and Para States.	74

c) Molecular States: Gas, Liquid, and Solid	76	5.2 Experimental Methods	214
d) Phase Transition at High Pressures: Transition to a Metallic State	78	5.2.1 Nuclear Magnetic Resonance and Related Methods	215
3.1.2 Equation of State	82	a) Relaxation-Time Measurements	215
a) The Solid Phase	85	b) Pulsed-Field-Gradient Method.	220
b) The Melting Line	86	c) Muon Spin Rotation.	220
c) The Fluid Phase	86	d) Perturbed Angular Correlation.	220
d) The Reference Isobar for $p_0 = 0.1$ MPa	88	e) Mössbauer Effect.	221
3.2 Volume of Hydrogen in Metals	95	5.2.2 Quasi-Elastic Neutron Scattering	223
3.3 Solubility Enhancement Under High Hydrogen Pressures.	101	5.2.3 Other Methods.	227
3.4 Phase Diagrams Under Extended p, T Conditions	110	a) Permeation, Absorption-Desorption, Electrochemical Method	227
4 Atomistic States of Hydrogen in Metals.	120	b) Resistivity Relaxation	227
4.1 Site Location by the Channeling Method	121	c) Quench-Recovery Method	228
4.1.1 Principles of Ion Channeling.	121	d) Mechanical Relaxation and Magnetic Disaccommodation	228
4.1.2 Site Location of Hydrogen in Metals.	124	5.3 Experimental Results on Diffusion Coefficients	229
4.2 X-Ray Diffraction and Scattering	128	5.4 Experimental Results on the Diffusion Mechanism.	240
4.3 Neutron Diffraction	134	5.4.1 Elementary Jumps	240
4.4 Inelastic Neutron Scattering	140	5.4.2 Interaction Between Hydrogen Atoms	247
4.4.1 Optic-Mode Vibration of Hydrogen Atoms	140	5.5 Diffusion in Inhomogeneous Systems	256
4.4.2 Local Potential Field for Hydrogen.	148	5.5.1 Diffusion in Crystalline and Amorphous Alloys.	256
4.4.3 Determination of Hydrogen Wave Functions by Inelastic Neutron Scattering	153	5.5.2 Motion of Hydrogen Atoms near Impurity Atoms in bcc Metals	259
4.4.4 Band-Mode Vibration of Hydrogen Atoms	155	5.6 Theoretical Considerations on the Diffusion Mechanism	270
4.5 Some Specific Problems of Site Occupancy	159	5.6.1 The Tunneling-Matrix Element J	271
4.5.1 Stress-Induced State	159	5.6.2 Diffusion Mechanisms in the Low-Temperature Region - Zero-Phonon Processes	277
4.5.2 Trapped States	164	5.6.3 Diffusion Mechanisms in the High-temperature Region - Phonon-Assisted Processes	283
a) Mutual Trapping - Hydrogen Pairs in Some hcp Metals	164	5.7 Critical Analysis of the Experimental Data in Terms of the Quantum Theory of Diffusion	288
b) Trapping by Impurity Atoms.	168	5.7.1 Two-Site Tunneling of Hydrogen Trapped by O and N Atoms in Nb	288
c) Trapping by Radiation-Induced Defects	171	5.7.2 Diffusion of Positive Muons and Hydrogen Isotopes at Low Temperatures - Zero-Phonon Processes.	290
4.6 Theory of the Atomistic State of Hydrogen in Metals	184	5.7.3 Diffusion of Positive Muons and Hydrogen Isotopes at High Temperatures - Phonon-Assisted Processes	292
4.6.1 Theory of Self-Trapped States - Empirical Potential Approach	186	Addendum 5A: Two-Site Tunneling of Hydrogen in α -ScH _x	297
a) Self-Trapped State	189	Addendum 5B: Stress-Enhanced Diffusion?	298
b) Excited States.	195		
4.6.2 Theory of β Phase of the Vanadium-Hydrogen System.	197		
4.6.3 Theory Based on Nonempirical Potentials.	201		
5 Diffusion	207		
5.1 Introduction	207	6 Electronic Structure	300
5.1.1 Diffusion Coefficients	207	6.1 Hydrogen-Induced Changes in the Electronic Structure of Metal Hydrides	300
5.1.2 Diffusion of Interstitial Hydrogen in Metals.	210		

6.2	Energies of Hydride Formation	305
6.2.1	Band-Theoretic Calculation	305
6.2.2	Effective-Medium Theory	308
6.3	Hydrogen–Metal Interaction Potential	310
6.4	Electronic Structure of Metallic Hydrogen	313
6.4.1	Structural Properties	313
6.4.2	Superconductivity	316
	References	321
	List of Symbols	342
	List of Abbreviations	347
	Subject Index	349
