
CONTENTS

Preface ix

1 INTRODUCTION TO OPTOELECTRONICS AND LIGHTWAVE TECHNOLOGY 1

1.1	The Story of Fiber Optical Communication Systems	1
1.1.1	The beginning	1
1.1.2	Lasers and detectors	1
1.1.3	Free space optical communication and optical pipes	2
1.1.4	Glass materials and fibers	3
1.1.5	System objectives and the first real fibers	4
1.1.6	Graded index versus single mode	4
1.1.7	The first systems and gearing up for production	5
1.1.8	The first single mode systems	6
1.1.9	Pulling the plug on transmission!	6
1.1.10	Fiber to the home	7
1.1.11	The optical 'inner space', communications within computers and switches	8
1.2	Some Major Foundations for Developing Technology	8
1.2.1	Optical fiber and fiber components	8
1.2.2	Semiconductor lasers	13
1.2.3	Integrated optical waveguide device	19
1.2.4	Some advanced lightwave techniques	21
	References	35

2 COHERENT LIGHTWAVE TRANSMISSION TECHNOLOGY 41

2.1	Principles of Coherent Lightwave Transmission	41
2.1.1	Operation of coherent transmission	43
2.1.2	Modulation and demodulation techniques	50
2.1.3	Experimental configurations of coherent transmission	55
2.2	Quantum Limitations on Coherent Transmission	57
2.2.1	Quantum limitations on direct detection	57
2.2.2	Quantum limitation on homodyne detection	59
2.2.3	Quantum limitation on heterodyne detection	61

2.3	Heterodyne and Homodyne Operation	63
2.3.1	Heterodyne operation	63
2.3.2	Homodyne operation	64
2.4	Theoretical Analysis of Coherent Optical Receivers	66
2.5	Polarization Control Technique	78
2.5.1	Polarization-state control	79
2.5.2	Theoretical analysis of polarization control	82
2.6	Polarization/Phase Diversity Reception for Coherent Transmission	87
2.6.1	Principles of diversity reception	87
2.6.2	Diversity receivers	91
	References	96

3 OPTICAL FREQUENCY DIVISION MULTIPLEXING (FDM) TECHNOLOGY 102

3.1	Significance of Optical Frequency Division Multiplexing	102
3.2	Wavelength Division Multiplexing (WDM)	103
3.2.1	Principles of multiplexing/demultiplexing devices for WDM	104
3.2.2	Design and parameters of WDM systems	109
3.3	FDM Network in Broadband Telecommunication	114
3.4	Coherent Optical FDM Technology	118
3.4.1	FDM coherent star network	118
3.4.2	Frequency stabilization of FDM network	122
3.5	Microwave Subcarrier Multiplexing Multichannel Optical Communication	126
3.5.1	Microwave transmitter (multiplexer) and optical link	127
3.5.2	Microwave receiver and experimental results	130
3.6	Wavelength Division (WD) Photonic Switching	134
3.6.1	Wavelength division (WD) switching techniques	136
3.6.2	Coherent wavelength division photonic switching system	140
	References	143

4 HIGH-SPEED AND TIME DIVISION MULTIPLEXING OPTICAL TRANSMISSION 148

4.1	Introduction to High-Speed and TDM Transmission	148
4.2	Multi Gbit/s Optical Modulation	150
4.2.1	Direct modulation	150
4.2.2	External modulation	159
4.3	Optical Time Division Multiplexing Techniques	160
4.3.1	Principles of optical time division multiplexing and demultiplexing	161
4.3.2	High-bit-rate transmission experiments using OTDM	165
4.4	Optical Soliton Transmissions	166
4.4.1	Optical soliton propagation in fibers	167
4.4.2	Demonstration of fiber soliton transmission	169
	References	174

5 OPTICAL FIBERS—WAVEGUIDES AND DEVICES 179

5.1	Introduction	179
5.2	The Electromagnetic Theory Leading to Linearly Polarized (LP) Modes	180

5.3	Mode Cut-off Condition	187
5.4	Visualizing the Higher-order Mode Fields	189
5.5	Phase and Group Velocity	192
5.6	Theory of Dispersion in Single Mode Fibers	196
5.7	Design of Single Mode Fiber Dispersion Characteristics	198
5.8	Fiber Attenuation	201
5.8.1	Rayleigh scattering	201
5.8.2	Ultra-violet 'band-edge' and infra-red 'lattice' absorption	201
5.8.3	O—H absorption	203
5.9	Special Fiber Designs for Polarization Maintaining Fibers	203
5.10	Fiber Couplers	205
5.11	Optical Fiber Amplifiers and Lasers	207
	References	211

6 SEMICONDUCTOR LASERS AND QUANTUM WELL DEVICES 212

6.1	Introduction	212
6.2	Narrow-linewidth and Single-longitudinal Mode Laser	213
6.2.1	The linewidth of semiconductor lasers	214
6.2.2	$\lambda/4$ -shifted DFB laser diodes	218
6.2.3	MQW-DFB laser with narrow spectral linewidth	223
6.3	Wavelength-tunable Laser Diodes	226
6.3.1	An ideal tunable laser diode	227
6.3.2	External cavity tunable laser diodes	230
6.3.3	Wavelength-tunable DFB/DBR lasers	231
6.4	High-speed DFB/DBR Laser Diodes	241
6.5	Quantum Well Devices	245
6.5.1	Potential and density of states in a quantum well	245
6.5.2	Quantum well lasers	249
6.5.3	Quantum well optical modulators	253
	References	258

7 GUIDED-WAVE OPTICAL DEVICES 265

7.1	Theory of Guided-wave Optics	265
7.1.1	Coupled mode theory of parallel waveguides	265
7.1.2	Coupled mode analysis of multiwaveguides	270
7.2	Integrated Optics in Lithium Niobate Waveguides	274
7.2.1	Lithium niobate guided-wave devices	275
7.2.2	Fabrication techniques of lithium niobate waveguides	281
7.3	Optical Waveguides in Semiconductors	285
7.3.1	GaAs and InP optical waveguides	286
7.3.2	Some calculations of semiconductor directional couplers	288
	References	292
