Contents

1	**Introduction**	**1**
1.1	Introduction	2
1.2	A History of Control Systems	4
1.3	The Control Systems Engineer	9
1.4	Response Characteristics and System Configurations	10
1.5	Analysis and Design Objectives	14
Case Study	**Antenna Azimuth: An Introduction to Position Control Systems**	**17**
1.6	The Design Process	21
1.7	Computer-Aided Design	27
	Summary	28
	Review Questions	28
	Problems	29
	Bibliography	33
2	**Modeling in the Frequency Domain**	**35**
2.1	Introduction	36
2.2	Laplace Transform Review	37
2.3	The Transfer Function	46
2.4	Electric Network Transfer Functions	49
2.5	Translational Mechanical System Transfer Functions	64
2.6	Rotational Mechanical System Transfer Functions	71
2.7	Transfer Functions for Systems with Gears	76
2.8	Electromechanical System Transfer Functions	81
2.9	Electric Circuit Analogs	87
2.10	Nonlinearities	91
2.11	Linearization	92

Case Studies **Antenna Control: Transfer Functions 98**
Transfer Function of a Human Leg 100
Summary 102
Review Questions 102
Problems 103
Bibliography 115

3 Modeling in the Time Domain 117
3.1 Introduction 118
3.2 Some Observations 119
3.3 The General State-Space Representation 124
3.4 Applying the State-Space Representation 126
3.5 Converting a Transfer Function to State Space 133
3.6 Converting from State Space to a Transfer Function 140
3.7 Linearization 141

Case Studies **Antenna Control: State-Space Representation 144**
Pharmaceutical Drug Absorption 146
Summary 149
Review Questions 150
Problems 150
Bibliography 158

4 Time Response 159
4.1 Introduction 160
4.2 Poles, Zeros, and System Response 161
4.3 First-Order Systems 164
4.4 Second-Order Systems: Introduction 167
4.5 The General Second-Order System 172
4.6 Underdamped Second-Order Systems 176
4.7 System Response with Additional Poles 186
4.8 System Response with Zeros 190
4.9 Laplace Transform Solution of State Equations 195

4.10 Time Domain Solution of State Equations 198
4.11 Time Response via Computer Simulation 203

Case Studies **Antenna Control: Open-Loop Response 206**
UFSS: Open-Loop Pitch Response 209
Summary 212
Review Questions 214
Problems 215
Design Problems 223
Bibliography 225

5 Reduction of Multiple Subsystems 226
5.1 Introduction 227
5.2 Block Diagrams 228
5.3 Analysis and Design of Feedback Systems 237
5.4 Signal-Flow Graphs 240
5.5 Mason's Rule 242
5.6 Signal-Flow Graphs of State Equations 245
5.7 Alternate Representations in State Space 247
5.8 Similarity Transformations 257

Case Studies **Antenna Control: Designing a Closed-Loop Response 268**
UFSS Vehicle: Pitch-Angle Control Representation 272
Summary 274
Review Questions 275
Problems 276
Design Problems 292
Bibliography 294

6 Stability 295
6.1 Introduction 296
6.2 Routh-Hurwitz Criterion 300
6.3 Routh-Hurwitz Criterion: Special Cases 303
6.4 Routh-Hurwitz Criterion: Additional Examples 310
6.5 Stability in State Space 317

Case Studies **Antenna Control: Stability Design via Gain 320**
UFSS Vehicle: Stability Design via Gain 320
Summary 322
Review Questions 323
Problems 323
Design Problems 330
Bibliography 332

7 Steady-State Errors 333
7.1 Introduction 334
7.2 Steady-State Error for Unity Feedback Systems 338
7.3 Static Error Constants and System Type 344
7.4 Steady-State Error Specifications 348
7.5 Steady-State Error for Disturbances 350
7.6 Steady-State Error for Nonunity Feedback Systems 352
7.7 Sensitivity 355

Case Studies **Antenna Control: Steady-State Error Design via Gain 358**
Video Laser Disc Recorder: Steady-State Error Design via Gain 359
Summary 361
Review Questions 362
Problems 363
Design Problems 376
Bibliography 378

8 Root Locus Techniques 379
8.1 Introduction 380
8.2 Defining the Root Locus 385
8.3 Properties of the Root Locus 388
8.4 Sketching the Root Locus 390
8.5 Refining the Sketch 395
8.6 An Example 404
8.7 Transient Response Design via Gain Adjustment 407
8.8 Generalized Root Locus 412

8.9 Root Locus for Positive-Feedback Systems 414
8.10 Pole Sensitivity 417

Case Studies **Antenna Control: Transient Design via Gain 419**
UFSS Vehicle: Transient Design via Gain 420
Summary 424
Review Questions 425
Problems 426
Design Problems 439
Bibliography 442

9 Design via Root Locus 444
9.1 Introduction 445
9.2 Improving Steady-State Error via Cascade Compensation 449
9.3 Improving Transient Response via Cascade Compensation 459
9.4 Improving Steady-State Error and Transient Response 475
9.5 Feedback Compensation 488
9.6 Physical Realization of Compensation 500

Case Studies **Antenna Control: Lag-Lead Compensation 505**
UFSS Vehicle: Lead and Feedback Compensation 508
Summary 511
Review Questions 512
Problems 513
Design Problems 521
Bibliography 527

10 Frequency Response Techniques 528
10.1 Introduction 529
10.2 Asymptotic Approximations: Bode Plots 536
10.3 Introduction to the Nyquist Criterion 556
10.4 Sketching the Nyquist Diagram 562
10.5 Stability via the Nyquist Diagram 567
10.6 Gain Margin and Phase Margin 572
10.7 Stability via Bode Plots 574

10.8 Relation between Closed-Loop Transient and Closed-Loop Frequency Responses 577
10.9 Relation between Closed- and Open-Loop Frequency Responses 580
10.10 Relation between Closed-Loop Transient and Open-Loop Frequency Responses 586
10.11 Steady-State Error Characteristics from Frequency Response 590
10.12 Systems with Time Delay 594
10.13 Obtaining Transfer Functions Experimentally 599
Case Study **Antenna Control: Stability Design and Transient Performance 602**
Summary 604
Review Questions 605
Problems 606
Bibliography 615

11 Design via Frequency Response 616
11.1 Introduction 617
11.2 Transient Response via Gain Adjustment 618
11.3 Lag Compensation 621
11.4 Lead Compensation 625
11.5 Lag-Lead Compensation 632
Case Studies **Antenna Control: Gain Design 637**
Antenna Control: Cascade Compensation Design 638
Summary 639
Review Questions 640
Problems 640
Design Problems 644
